645. And he learns them both at the same time?—We treat French and German in that respect just as we do Latin and Greek.

646. (*Mr. Vaughan.*) A boy who learns physical science and does not learn modern languages, according to this general rule, still, of course, pays for learning modern languages?—He does.

647. (*Lord Lyttelton.*) Is it your impression that the knowledge of French and German is really of equal importance?—I suppose for practical purposes a knowledge of French is of more value than a knowledge of German, but for the uses of a scholar a knowledge of German is of more importance than a knowledge of French.

648. Have they always been on an equal footing?—No; the rule was that they learnt French up to the top of the middle school, and then they began to learn German and left off the French altogether. I found that the result was that the boys almost entirely forgot the French before they left school, and then on the other hand I was not satisfied that they had learnt German long enough for it to make an impression on them; therefore I requested Mr. Bowden Smith to carry the French up to the top of the school and begin the German lower down.

649. (*Mr. Thompson.*) Is any French or German work used in the ordinary school work?—Yes, in the forms sometimes. In the sixth form for instance, we are reading now for history De Tocqueville on America.

650. (*Lord Clarendon.*) Under the present arrangement a boy may go through Rugby without learning any French or German at all?—He may.

651. (*Mr. Vaughan.*) I see there are very few who do not study modern languages. There are 12 in the sixth, only 17 in the upper school, and only one in the lower school?—Yes.

652. (*Lord Clarendon.*) When does a boy begin to learn French?—As soon as he comes into the school.

653. And German?—That depends on what part of the school he comes into.

654. German is not learnt below a certain point in

the school?—Not below a certain point. It is not compulsory on boys in the lower school, until they have made some progress in French. You will see the lower school in Table B.B. It is the second set of the lower school. You will see from page 54 that the third and fourth sets learn no German. That is 27 boys.

655. (*Lord Lyttelton.*) I see modern languages are not taken more than two hours in a week, and sometimes an hour and a half?—Yes.

656. Is speaking French a regular part of the instruction?—For boys in the upper part of the school over and above the regular two hours or hour and a half there are conversation lessons.

657. Are they compulsory?—They are not. The boys in the sixth form may have them gratuitously if they apply.

658. Do you know how many avail themselves of it?—I cannot tell. Mr. Bowden Smith will answer that.

659. Do they ever practise speaking German?—I think so, but I am not sure. Mr. Vecqueray can tell exactly. He has had conversation lessons in German.

660. As to the state of the boys' preparation on going to the school, do you find it at all frequent that little boys who come can talk French easily?—It is not at all frequent; it is very rare.

661. Do a considerable proportion come and know nothing of German at all?—A considerable portion know absolutely nothing of German.

662. I suppose many more know something of French on leaving than of German?—Yes.

663. Take a full school-day. The time spent by one of the upper boys in school is about five hours a day, including all the work, is not that so?—I think that is so.

664. Mathematics, I think, for about three hours a week?—Yes, 3½ I think.

665. (*Lord Clarendon.*) Before a boy is admitted into the school you examine him?—He is examined immediately on coming to be classed.

666. That is a sort of matriculation?—Yes.

667. Do you ever consider it desirable to have an examination including French?—A boy is always examined in French, necessarily in order to be classed, as well as in everything else. He is examined by his classical tutor in Latin and Greek, and that determines the form in which he is to be placed. He is then examined by the modern language master to determine in what modern language set he should be placed, and then by the mathematical master to determine in what mathematical set he should be placed.

668. (*Lord Lyttelton.*) In classics a boy would spend in school between three and four hours a day?—In the upper school he would spend 2¾ hours.

669. Will you look at the first compartment of the classical time table for Monday, it is from 7.15 to 8.15?—Yes.

670. And from 11.30 to 12.30?—Yes.

671. And from 4.30 to 6?—Yes. We do not lay so much stress on Mondays as on Wednesdays and Fridays, because whenever a holiday is given it is always on the Monday afternoon.

672. On the average it is somewhere about three hours?—Yes.

673. (*Mr. Thompson.*) That is exclusive of the private tutor work?—Yes.

674. (*Mr. Vaughan.*) Is there a correspondence between this classical time table at page 23 and the mathematical time table at page 24?—No. I think there is a slight discrepancy; the reason being, that in page 24 the mathematicians in their time table have included what was originally the time assigned to the writing master, which time they now give to the mathematical master to do work which they are not supposed to prepare, and in the classical time table the classical masters have not included that time.

675. In the one case I understand there are two lessons, and in the other four?—Yes. They are not supposed to prepare anything for it.

676. As a rule, you say the promotion of the classical forms does not depend only on the classical lessons. I understand that the only subjects besides purely classical subjects which help to determine the the promotion are mathematics and modern languages?—No, I did not mean to be so precise as that, I meant by classical lessons the lessons done with the classical masters, including history.

677. I meant that also. Besides the lessons done by the classical masters, the only subjects which determine the promotion or help to determine it are mathematics and modern languages?—Yes. Natural philosophy also comes in, but that is simply understood to be a substitute for modern languages.

678. (*Lord Lyttelton.*) But divinity and history help to determine it?—They are included in the classical lessons.

679. (*Mr. Vaughan.*) You mean to say that supposing a boy were learning natural science, although it is not mentioned so here, yet it would actually be the case that his lessons in physical science would have the same effect as his modern language lessons would, unless they happen to be fewer in number?—They are not fewer in number. I think you will find they are the same. There are two modern language lessons, and two natural science lessons.

680. (*Mr. Thompson.*) Going on simultaneously?—Not necessarily, but if a boy does not get two modern language lessons he gets two natural science lessons instead. You will find the natural science lessons at page 60.

681. I presume a boy's proficiency in mathematics or in modern languages, or in both, would not help him in ascending from one form to another in any degree?—Yes it does.

682. The contrary seems rather to follow from the language here; it says, "Rank in the school is "determined by the classical forms, but promotion "in those forms does not depend only on the classical "lessons."?—What is meant is this, that rank in the school is determined by the classical forms and by nothing else; for instance, if a boy is in the twenty it makes no difference, as far as the rank in the school is concerned, whether he is in the first mathematical set of the upper school or in the fifth, but he ascends within the twenty and is promoted out of the twenty by the help of his mathematics together with the rest. The words "in and out of" might have been put in before the words "those forms."

683. Of course there is a degree of inferiority which would exclude a boy?—Yes, because the time allowed for mathematics and modern languages would not allow of their counting enough to overthrow the classical work.

684. The boy Smith in the sixth form may be inferior in classics to the boy Jones who may be in the Twenty?—Certainly, but it is not possible that a boy in the sixth form should be inferior in classics to a boy in the fifth form.

685. Do you think that your system of marking encourages boys to learn mathematics and modern languages?—It does very much indeed.

686. (*Mr. Vaughan.*) That applies also to physical science?—Yes; it was mere omission that it was not mentioned.

687. (*Lord Lyttelton.*) I think the greater number of prizes are given for classics?—Yes, very much the larger.

688. When it is said "the supremacy of the classics "is maintained by the greater number of lessons "given to that subject" it means "by the greater proportion of time given to classics"?—Yes.

689. (*Mr. Vaughan.*) The same number of marks is given for each lesson?—Yes.

690. (*Mr. Thompson.*) I see that the relation between the time spent in classics and that spent in mathematics may be represented as a ratio of 16½ to 3; is that about the ratio in which mathematics

RUGBY.

Rev. F. Temple.

13 May 1862.

operate in determining a boy's promotion?—The proportion of marks is very much this: 78 in classics including divinity and history, 12 for mathematics and 10 for modern languages,—I think it is very nearly that.

691. (*Mr. Vaughan.*) After that explanation which you have given about modern languages and the mode in which promotion is given for modern languages and for physical science may I ask how is it that the proportion of boys in the sixth form, who are learning natural science, is so much greater than in any other form?—I think it is a mere accident.

692. According to Tables B.B., p. 60, there are 11 out of the sixth form (which consists of only 42) learning physical science, there are three in the twenty, and only four in the fifth and in the two divisions of the second fifth?—Yes.

693. That is a remarkable disproportion?—I think it is a mere accident.

694. (*Lord Lyttelton.*) Where are the four who are learning both modern languages and natural science, are they in the sixth form?—No.

695. (*Mr. Vaughan.*) Do you know of any reason why there is such a much larger proportion of sixth-form boys learning physical science than of any other form boys?—I do not know of any reason, I believe it to be a mere accident.

696. (*Lord Lyttelton.*) You are not aware whether it has generally been so?—It has not been so.

697. (*Mr. Vaughan.*) Do you know also why it is that there are so very few of the middle school learning physical science?—I think Mr. Wilson would be able to explain that.

698. There are only 11 out of the whole middle school which consists of 226 boys, whereas in the sixth form there are eleven?—Yes; I think at that point of the school it depends much more on the parents; and they lay more stress on French and German generally speaking than on natural science; but higher up in the school the boys are left more to their own choice; parents are more willing to let them take their own line.

699. (*Mr. Thompson.*) Have you any idea what are the motives that determine a boy in choosing natural science?—I think when it first began there was an idea that it was easier, and that the boys could get marks from it more easily than from French and German, I fancy Mr. Wilson would not encourage that; he requires very decided work.

700. Do you think there is any boy in the school who has a real predilection for a study of that sort?—Several; there is one who might be called a very fair chemist.

701. Do you think he took it up from predilection in the first instance?—I think so.

702. He probably had seen something of the kind before he came to Rugby?—I do not know; he lives in the town.

703. Is he the son of a chemist?—No, he is the son of a widow lady and his father was a clergyman.

704. Are the four who learn both subjects particularly clever boys?—I do not think there is anything particular about them; I think it is only because their parents wish them to learn both.

705. Do they make pretty fair progress in each subject?—I have not looked particularly into their cases at all.

706. (*Lord Clarendon.*) You say you do not consider the progress of the boys in these studies falls below their progress in other studies, in proportion to the time given to each subject; would you consider that they attained a tolerable proficiency?—The boys I think get a really good knowledge of the grammar, and would learn sufficient for practical use very shortly if they chose to follow it up.

707. Do you consider that they are very well grounded?—I do; I think that they are really well grounded.

708. (*Lord Lyttelton.*) This question, (No. 11, Part III.) I think, was not exactly understood. The question is whether any extra fee is included; the answer is, no entrance fees. Is there a payment for those subjects?—I think, probably, that is a misprint.

709. Is there no distinct payment at all for mathematics, modern languages, or natural science?—Not over and above the 15½ guineas.

710. (*Lord Clarendon*). "The rest of the school "at that time and the whole of the school in December "are examined by the masters." Do you consider that that is sufficient without calling in any extra aid. Do you find the results of that satisfactory?—I think it is very satisfactory. The examination is very thorough.

711. (*Lord Devon.*) No master examines his own form?—No.

712. (*Mr. Vaughan.*) Does the examination include all the work of the form?—Yes.

713. (*Lord Lyttelton.*) The examination covers all the work done in the school?—I do not think it covers all the work done in the half year; it includes the bulk of it, but the master of a form will very often think it advisable to give his form some extra work which he does not choose to spend so much trouble upon as to prepare them to be examined.

714. (*Mr. Vaughan.*) I understand that the same papers are set for the whole of a school?—No.

715. By a whole school I mean a whole division of the school called "a school;" the whole upper school has the same papers?—Yes, in June; not in December.

716. And the middle school has the same?—Yes.

717. The same paper is put before them to answer?—Yes.

718. Are there not particular questions sometimes in the paper addressed to one part of the school more than the other, or is it the fact that the same questions are addressed to them all?—The same questions are addressed to them all, but whilst that principle is observed there are slight modifications. Some of the papers may be more particularly adapted to one part of the school; and there are some papers which would be given to the upper part of the school and not to the lower part.

719. I wish to know whether when they go in and receive the same paper, any questions are specially addressed or so framed for one part of the school?—No.

720. Is the superiority of one part of the school to the other determined entirely by the mode in which they answer the same questions?—By the mode in which they answer the same questions.

721. (*Lord Lyttelton.*) Are the examiners of the sixth form, who come from Oxford and Cambridge, informed beforehand what subjects they are to examine in?—Yes.

722. They are the work which the sixth form are doing?—Partly that, and partly some extra work which they do themselves.

723. (*Mr. Vaughan.*) Does the Vice-Chancellor who nominates the examiners know the variety of subjects?—He is told.

724. Do the same examiners examine in all the subjects?—I will not say that they examine in all the subjects, but they are responsible for the examination in all the subjects.

725. Supposing examiners were coming from Oxford would they be responsible for the examination in mathematics?—They would.

726. In modern languages?—Yes.

727. In natural science?—Yes.

728. The same examiners?—Yes.

729. Do you suppose the Vice-Chancellor is informed of the comprehensiveness of the examination at the time when he appoints the examiners?—Yes; he is told.

730. How many examiners does he appoint?—There are two; one from each university.

731. As a matter of fact, how do those examiners conduct the examination; for instance, in modern languages and in natural science, do they actually

set the papers themselves?—They do occasionally, and sometimes they do not.

732. Do they get assistance?—They get assistance.

733. If they feel that they want it?—If they feel that they want it.

734. Who is the assistant in those cases?—That is left to them.

735. Do they bring an assistant?—No; they do not.

736. Do they generally go to the master of the school who teaches those boys?—They do not.

737. Practically, am I to understand that they do it themselves?—Practically, they generally get some person whom they think competent to do it. They do not bring him here.

738. At the June examination for the promotions, do the masters examine their own pupils?—It is not possible to arrange that a master shall never look over the papers of his own private pupils; it is avoided as much as it possibly can be.

739. Examining by committee in the way in which you do, I suppose it would not be practicable?—It would not be practicable entirely to avoid it.

740. Do you know, how they manage in examining the form to come to a determination on the merits of their own pupils?—In going through such a number of papers it would be hardly possible to lay great stress on a particular boy's paper unless a master wished to be unjust; he would be just involuntarily.

741. Do you mean in marking his work?—Hardly, I think.

742. I perfectly understand that there is no partiality at all, but I do not quite understand how they do not pay attention to a particular boy's paper?—What I mean is, that when a master has to look over the answers of the whole upper school, it is hardly possible for him to advert to the fact that some particular boy as he comes to him in order is his own pupil.

743. He does not notice it?—He does not notice the boy.

744. He knows the boy, but you mean to say it is a matter of indifference to him?—Quite so.

745. (*Mr. Thompson.*) That is one reason in favour of written examinations?—Yes.

746. (*Lord Clarendon.*) Has this come lately into operation?—The examination is chiefly on paper.

747. (*Lord Lyttelton.*) You say, "If the best boy "in the fifth obtained 5,000 form marks, the master "of the twenty would add enough to all the form "marks of his boys to bring the lowest up to 5000." It is difficult to understand exactly the way that is worked?—The result of it is that there is no competition between the boys of different forms in their form work. By the form marks is meant the sum total of all the marks given for the lessons throughout the half-year as they are done, but the examination marks are the marks given for the examination; there is no competition between boys in regard to the form marks, because if the boy at the top of the fifth gets 5,000 and the boy at the bottom of the twenty has been marked by the master of the twenty at 3,000 the master of the twenty will forthwith alter all his form marks by adding 2,000 to them; but then comes the examination and this head boy in the fifth may get a great many more marks than the lower boy of the twenty.

748. What is the object of raising up the marks of the twenty in that way?—Because you are comparing there work of two different kinds, viz., work done by a boy before the master of the twenty with work done by another boy before the master of the fifth. Besides that, you are taking two different standards; it would not at all follow that because the master of the twenty marked his lowest boy 2,000 and the master of the fifth marked his highest boy 5,000 that therefore the boy at the bottom of the twenty was lower than the boy at the top of the fifth, because they would naturally take different standards.

749. You mean that before the examination they must all start on the same level?—Yes, if they are to be compared together.

750. (*Mr. Vaughan.*) I understand that the result of the examination generally is shown in that list, which you call the Long List?—Yes.

751. How is the result shown as to the mode in which they acquit themselves in that particular examination, apart from the form marks which they bring to the examination?—They are told of their form marks before the examination.

752. How is it known to the school which boys have done best in that particular examination?—By the result,—by the place they have obtained. The place they have obtained consists of the result of the examination and the result of the form marks. They are told their form marks first, and a separate list is published.

753. I understand the boys in that list would be competing in one examination?—There are two lists; one shows the order without reference to the examination; the other the order when the examination has been taken into account.

754. But supposing Jones in the fifth form does better than Smith at the top of the twenty on that particular examination, how is that known?—It would be known only by comparing the two lists.

755. (*Mr. Thompson.*) Would he get promoted?—If a boy at the top of the fifth beat a boy in the twenty by more than the difference between the form marks of the top of the fifth, and that boy's place in the twenty, he would appear above him in the long list; but if he did not beat him by more than that he would only get somewhere near him.

756. (*Lord Devon.*) It would be a very difficult thing for him to do that?—Yes.

757. (*Mr. Vaughan.*) Supposing it happened that a boy in the lower form did better than a boy in the upper form, there would be none but indirect evidence of the fact preserved?—None, except the places won by the latter.

758. The fact is that the mere result of the examination taken by itself does not appear?—No.

759. (*Mr. Thompson.*) I understand you that a form is never pushed up altogether?—No, never. We take up individual boys. If a boy has been in a form so long that we think it is better to promote him, we promote him in spite of the rules. That is quite an exceptional case.

760. (*Mr. Vaughan.*) I suppose this system has been elaborated with a great deal of care?—It has.

761. As the best system on the whole you could think of?—Yes, it has grown up by degrees.

762. How was it determined in that June examination, how many boys should pass from one parallel form into the form above, and how many boys should pass from the other parallel form into the same form above?—Simply by the examination marks.

763. That is what I should call the parallel forms competing against each other. As I understood your observation in the written answers, it was this, that supposing A to be the form above, and these to be the two parallels, there was no competition between those two?—I will explain it. There is no competition between those two forms as far as they there stand, but there is a competition between such individuals of these two forms as can beat those in the form above.

764. I mean as to vacancies to be filled up in the form above?—Not at that time; the vacancies will not come till afterwards. Then when we come to the actual promotion, the boys who have left will make vacancies in this form above. We take an equal number.

765. Whatever their marks may be?—Yes.

766. (*Lord Lyttelton.*) As far as their vacancies go?—Yes.

767. (*Mr. Vaughan.*) Supposing it was shown that the master of form A had brought his scholars up above the pitch of the master of form B. An equal number of both would be taken?—Yes; but in that case the larger number of form A would have

RUGBY.

Rev. F. Temple.

13 May 1862.

got into the form above already before we began promotion at all. I can show you precisely what I mean here. (*Dr. Temple explained the system of promotion by reference to the lists.*)

768. Again, supposing the form above two parallel divisions itself to consist of two parallel divisions, would each parallel below always empty itself into the same parallel division above?—No; we should arrange among ourselves as to which boy was to go into which parallel.

769. (*Lord Devon.*) The number of each form is limited, is it not?—It is limited; but not by an absolute number.

770. (*Mr. Vaughan.*) Is there a promotion at the Christmas examination as well as prizes?—Yes; there are four promotions in the year.

771. After the examinations?—Two after the examinations, and one at each intervening quarter, and this last promotion is determined simply by the form marks.

772. (*Lord Clarendon.*) "The masters are formed "into committees of two, and each committee "examine two forms, one high in the school and one "low. These committees are generally so distributed "that no master examines his own form except the "Head Master, who with another as his colleague, "examines the sixth." Are you able to adhere to that?—Pretty nearly, I do not think it has been broken since I have been here.

773. It works well?—Yes.

774. "The four mathematical masters examine the "whole school in mathematics." Is that sufficient?—I think it is quite enough.

775. And upon their marks prizes are given, and promotion and so forth?—Yes.

776. (*Mr. Vaughan.*) You mentioned that there are committees of examiners for the Christmas examination, you did not tell us who examined for the June examinations?—The masters examine.

777. The masters of each form?—Yes; that is each master taking one paper. For instance, all the upper school, both the twenty and the fifth, has been reading the Prometheus. One of the masters will be appointed to examine all the upper school in the Prometheus.

778. The number of masters then is uncertain?—We arrange it amongst ourselves. Every master takes a part in the examination.

779. But not on the same principle as at Christmas?—No.

780. (*Mr. Thompson.*) Is it *vivâ voce*?—No, by paper; we have *vivâ voce* besides, but the bulk of it is by paper: *vivâ voce* takes too long, and the school work is interrupted while it is going on.

781. (*Lord Lyttelton.*) About these extras, I think you estimate somewhere that a fair working boy works eight or nine hours a day. Could you say, taking a sixth-form boy, what part of that eight or nine hours is given to extra work?—I think it would be very difficult to say, because this work is done towards the end of the half year, and then I have no doubt that some of the boys work more than eight or nine hours a day.

782. Of course his work is the work he has to do in school, and the work he has to do in exercises, and preparation for the school; the extras must come after all that?—Yes, but you will observe that what is said there is, eight or nine hours on the whole school days, there are three half holidays.

783. (*Mr. Vaughan.*) Is that independent of the evening work which they have to do?—No, the whole of the work.

784. (*Lord Lyttelton.*) They work it up towards the end of the time?—Yes.

785. Are these extras limited to these subjects: classics, divinity, mathematics, modern language, and so on?—Yes.

786. Do they select books for themselves?—Yes, quite freely.

787. (*Lord Clarendon.*) Do they study much in this way; by these extra readings?—You will see in the sixth form how many have done so.

788. One only took in Hughes' South America?—Yes.

789. (*Mr. Vaughan.*) Are those at p. 26 fair specimens of the extras that are taken in modern languages and natural philosophy?—Yes, they are fair specimens.

790. I think you put under natural philosophy certain parts of Mill's Logic and Whewell's Inductive Sciences?—Yes.

791. (*Lord Lyttelton.*) There is some restriction in the list of books, is there not; the masters know beforehand what books the boys are going to study?—About six weeks beforehand I call for their extras, and if any boy takes anything which I think he could not study I say "Do not do that."

792. (*Mr. Vaughan.*) Is it set so long beforehand that a boy may devote his holidays to it?—It is not set at all. A boy would study an extra in the holidays at his own risk, so far as this, that if he took some book which was quite an extravagant book to take, I should refuse to examine him on it.

793. I am asking with regard to the holidays; are these extras set by themselves, so that the boys may take them in some preceding holidays and do the work then?—A boy in the sixth form might work at an extra in the summer holidays if he liked, subject to the risk that I have just mentioned. I do not think that any do.

794. (*Lord Devon.*) Is the quantum of extras set by the master such that an idle boy could bring up something which would give him very little trouble?—We should refuse an extra below a certain amount.

795. (*Lord Lyttelton.*) Have you ever refused any books?—Yes.

796. As not being good books?—As unprofitable.

797. (*Lord Devon.*) You refuse below a certain amount; but supposing a boy put down a great many books, more than you thought he could fairly take with reference to his other work, what should you do?—I should tell him he must not do it.

798. (*Lord Lyttelton.*) I observe that in every case the repetition is poetry?—Yes, they prefer poetry; they could learn prose if they liked, but they never do.

799. As to the fifth form, what is the difference?—The difference is, that in all forms below the sixth the master of the form, in the middle of the half year, announces what extras he will allow to be taken in his form, and they take their choice among them.

800. (*Lord Devon.*) Therefore it is a limited freedom?—Yes.

801. (*Lord Lyttelton.*) As to the extras, are they conducted in the same way as the rest of the examinations?—Yes.

802. (*Lord Devon.*) When, after the holidays?—No, just before the holidays.

803. (*Mr. Thompson.*) I think the examiners have to arrange them in classes?—At Christmas those who do best are arranged in honour classes.

804. (*Mr. Vaughan.*) That only applies to Christmas?—Yes.

805. (*Lord Devon.*) In going through these the boy has the assistance of his private tutor?—Yes, in the classical extra always.

806. Not in mathematics?—If he chooses. They never get the assistance of their tutors in getting up history and geography.

807. (*Mr. Thompson.*) Do you suppose that besides this amount of study, which appears here, the boys read books entirely by themselves; have they much leisure for that?—I do not think they read very much entirely by themselves. I rather wish they did, but I do not think they have time enough for it.

808. They read these extras with their private tutors?—Yes. History they read by themselves, of course.

809. (*Mr. Vaughan.*) Do you know the average number of broken exhibitions competed for?—I cannot tell you the average.

810. Are there one or two a year?—Only one

a year. There used to be more when the exhibitions were fewer in number, and held for a longer time, but now the exhibitions are held for only four years.

811. (*Mr. Thompson.*) It appeared from the evidence of Mr. Hefford yesterday that there was a change made in the number of the exhibitions from 21 to 20, was that with your knowledge?—Yes, quite.

812. And consent?—Yes.

813. (*Lord Clarendon.*) "The examination for "these exhibitions is conducted by examiners "nominated by the Vice-Chancellors of Oxford and "Cambridge. The boys are examined in the work of "the half year, classics, mathematics, modern lan- "guages, divinity, and history." Are they always equal to that?—Yes, I think they always can do that. They get assistance if they find it necessary,

814. No. 14, "Secondly looking over and correct- "ing some of their exercises." What division does the private tutor make between their exercises?—In each form some of the copies are corrected by the form master, and some of them are corrected by the boy's tutor.

815. What makes the division?—The division simply is so many given to one and so many given to the other.

816. Are they pre-arranged?—There is a fixed order through the school.

817. (*Mr. Thompson.*) The private tutor does not prepare, or draw as they call it, the exercises for the master, does he?—Yes, he does. He looks over some of the exercises before they go to the master, but the boy is required to show to the master both the corrected and the uncorrected exercises.

818. Do you mean he does not at all assist him in preparing to construe?—No, he does not assist him either in preparing to construe or in preparing his exercises. The boy does his exercise and brings it to his tutor. He then corrects it, and very often almost rewrites it. The boy then takes to the form master both the original and the tutor's corrected copy, and the form master runs his eye through the exercise and assigns marks on the uncorrected one.

819. (*Mr. Vaughan.*) Does not that make it necessary for the form master to read the uncorrected as well as the corrected copy?—Certainly the uncorrected; the corrected if he likes. What is brought to him is the copy with the tutor's marks upon it. The tutor marks under a mistake in red ink. That is the original copy. Of course, he looks chiefly to what it was before it was corrected.

820. If he looks chiefly to what it was before it was corrected what advantage is gained by its having been corrected beforehand by the tutor?—Because the tutor has the boy by his side and spends some time over it and corrects it with care; the form master merely looks over it to see what is the value of it.

821. Both have to go over an uncorrected copy?—Yes, one to correct, the other to value.

822. (*Lord Lyttelton.*) You say "some of their "exercises;" on what principle are they selected?—So many copies a week.

823. Chosen by the private tutor?—No, it is the copy of a such day.

824. (*Lord Clarendon.*) What is the special work in particular cases that you think necessary?—It would vary with each particular case. Sometimes a tutor thinks that such and such a boy is deficient in writing Latin prose and he gives him some special Latin prose to do; sometimes he thinks he is deficient in grammar, then he makes him learn this grammar.

825. (*Lord Lyttelton.*) That is work which is compulsory?—It is compulsory on the boy.

826. With regard to the report sent home; I see the tutor sends home his character. In the case where the private tutor is not also the boarding-house master, does not the boarding-house master send home a report as well?—He adds his remarks to the report and states what he thinks of the boy's general conduct.

827. (*Lord Clarendon.*) You say, "In teaching "these each tutor takes his pupils as he would take a "form, making one form of all his upper school pupils, "and another of all those who are in the middle "school." Have he and his pupils time for this?—Yes, though I think that the system works the masters very hard.

828. (*Mr. Thompson.*) How many hours a day do you think a master is occupied with his private pupils, supposing he had an average number?—It is exceedingly difficult to say, because there is this special work which is so very elastic. It may be very much and it may be very little. It would depend on his pupils and on himself very much indeed.

829. You say a boy has no choice as to a private tutor, he must take the master of the boarding-house to which he is sent?—Yes.

830. Is not that rather hard?—He chooses which boarding-house he will go to.

831. Suppose it happened that Mr. Evans' house, for instance, was full?—That cannot be avoided.

832. The boy could not change afterwards?—No.

833. (*Lord Clarendon.*) "The same tutor has "charge of him throughout and ends with knowing "him well." Does the tutor really take pains to know him and to advise him and to form his character?—The greatest pains.

834. As a general rule do the boys feel confidence in and look up to their tutors?—The boys have constantly most confidential communication with their tutors.

835. (*Lord Lyttelton.*) I am now speaking of the case where the boarding-house master is not the same as the private tutor. You say, "in all difficulties he "naturally goes to his tutor," suppose the boy was in the house of a mathematical tutor, would he in any difficulty more naturally go to his boarding-house master than to his private tutor?—He might have an inclination to do so, but as a general rule I think he would go to his tutor: he has more to do with him. Some boarding-house masters take very great pains with their boys, and see to them a great deal.

836. (*Mr. Vaughan.*) Do you think that the tutorial system as you have given it here is necessary in order to preserve that moral connection between a tutor and his pupil which you speak of. Do you think that all that tutorial work is necessary?—I think it is. You must have something round which the connexion must be gathered.

837. You think that examinations occasionally would not do?—No, it must be constant.

838. The effect on the master of having pupils in different parts of the school, as you describe it in your written answers, is most intelligible. I am speaking only of the effect on the masters. But as you have a system in which the masters of the lower forms examine the upper forms, would not those constant examinations recurring four times a year and the interest they would create be quite enough to keep the masters up to various kinds of work themselves?—I should not think it would be nearly enough.

839. (*Lord Devon.*) I understand you to say that you are decidedly of opinion that the existence of this private tutor system is beneficial both intellectually and morally?—I am decidedly of that opinion.

840. (*Mr. Thompson.*) I need hardly ask you whether if it was not already introduced you would have introduced it?—As I now see it I certainly should; whether I should have thought of introducing it is another question. It might not have occurred to me.

841. (*Mr. Vaughan.*) Supposing you were now to go to a new school of which you had the organization, you would organize it with that system?—Certainly.

842. (*Mr. Thompson.*) Unless there was some special reason against it?—That I cannot say of course.

843. Supposing the school consisted of 120 or 150

RUGBY.

Rev. F. Temple.

13 May 1862.

boys, what would you do?—I do not think I should do it in a very small school.

844. As you are perhaps aware it is not practised in many of the public schools?—I would not do it in very small schools for this reason, that in very small schools every master knows every boy. In a large school that is quite impossible, but by our system every boy is attached to some one.

845. (*Lord Clarendon.*) "The danger of the "system is that boys may get too much help, and "the work in form may be robbed of all reality, as "not being really done by the boys themselves; this "is met by requiring that the tutor shall not assist "the boy in preparing the school lessons at all." That is not quite consistent with the paragraph above, "The exercises to be looked over and corrected are "some of those which are set by the form master, "and they are finally shown up to him both in the "corrected and in the uncorrected state"?—You will observe that the tutor does not assist in preparing that exercise; it is done by the boy without any assistance.

846. The private assistance is not allowed to interfere with the school business?—It does not; there is merely a chronological difference, because it would have precisely the same effect if the exercise were shown up uncorrected to the form master, and the tutor had it afterwards. The only reason for showing it up to the tutor first is for the sake of the form master, who finds it very much easier to value the exercise when the mistakes have been marked.

847. (*Mr. Vaughan.*) Is it in order to save him time?—Yes.

848. That is at the moment, not in the end; as every master of a form is a tutor as well as master of a form, will the tutorial system of correcting exercises save time if he is obliged as tutor to alter the exercises although he does not do so as master of a form?—What I said was that the correcting of the copy before it went to the form master instead of afterwards, was for the purposeof saving time. My remark did not apply to the general arrangement at all.

849. (*Mr. Thompson.*) A person who read this evidence might be drawn to the conclusion that the larger the school was, and the more prosperous it was, the more expensive it becomes?—If you were to have in a small school the same amount of work done by men of the same calibre, the only difference would be that in a small school precisely the same quantity of work would be obtained with the form master.

850. But the expense to the boy would be less?—He would have to pay the form master the same; it would only be paid in a different way as form work, instead of as form work and tutor. If you are to get the same men they will not come for a less income. What I meant by saying I would only do it in a large school, is this: it is a good thing in a large school, taking the work which is done by the boy, to divide it into two parts, one of which shall be done with each from master successively, and the other of which shall be done with some one master who is to have charge of him from the beginning of his time to the end. It would not be more expensive because if you are to have the same men the difference is that in the one case you will pay perhaps 10 guineas for form work and 10 guineas for his work as private tutor, and in the other case you would pay him 20 guineas for his form work.

851. Do you not think that the size of the school has some effect in screening the boys from the influence of the Head Master, supposing he is a first-rate man, which in the public schools he generally is, and do you not think that it is in consequence of the size of the school that these private tutors are required?—Perhaps it may be so to some extent. To a certain extent the size of the school is a disadvantage; but then on the other hand, to a certain extent it is a great advantage; I mean there are very great moral advantages.

852. (*Lord Clarendon.*) No. 16, "The average "number of boys under a master is now 33. The "average number of pupils under a classical tutor "is now 45." You do not consider that too many?—No, I do not think it is more than he can manage at all.

853. Without too much fatigue to himself, and with benefit to the boys?—Yes. I should be sorry to diminish it.

854. (*Lord Lyttelton.*) Masters are about four or five hours in school, are they not?—No. In school a master is very rarely more than three hours.

855. (*Lord Clarendon.*) No. 18, "It is not found "practicable to do much more than to allow boys to "have extra private tuition in particular subjects, "thus, a boy can have extra private tuition in "mathematics or modern languages, and the time "at the disposal of the boys is generally enough to "permit this. But where it does not appear that "the boy has time enough he is sometimes allowed "to drop the two lessons a week, which he does "with his classical tutor; the tutor's fee in that "case being reduced from 10*l.* 10*s.* to 5*l.* 5*s.*, and "the boys in the fifth form or above it are sometimes "allowed to drop Latin verses. This, however, is "not permitted without the concurrence of the Head "Master, the form master, and the tutor; since it is "found that whatever value may be attached to the "writing of Latin verses for its own sake it is "certainly valuable as an instrument of teaching "Latin, and those who leave it off begin soon to "fall behind the others in their classical lessons "generally." In the first place does it often happen in the fifth form and above it that boys are allowed to drop Latin verses?—It happens every now and then.

856. You would not say it was a constant practice?—There are always some boys in those forms who do not do Latin verses.

857. Has it been the result of your observation that when they leave off making Latin verses they fall behind others, generally, in their classics?—Yes, they do a great deal. It depends very much on the point which they have reached in the school. Boys lower down in the school lose exceedingly by leaving off Latin verse. Boys towards the end of the school lose much less. But in all cases they lose interest in scholarship.

858. (*Lord Lyttelton.*) They leave off solely with the view of taking up some other study, do they not?—They do.

859. (*Lord Clarendon.*) No. 21, "There are also "libraries in each boarding house." Are they much used?—Constantly.

860. Who selects them?—The boys select them themselves, and bring them to the master of the house for his approval.

861. (*Lord Lyttelton.*) They subscribe 10*s.* a year apiece, do they not?—Yes.

862. (*Lord Clarendon.*) Is there any account kept?—Yes, by the house master.

863. (*Lord Lyttelton.*) Are there always sixth-form boys in every house?—Yes. If not, I generally put them in for the purpose of keeping order.

864. (*Mr. Thompson.*) Is that always possible to arrange?—Yes; it is done by the consent of the parents, always.

865. (*Lord Lyttelton.*) There is no difficulty in it?—None at all.

866. (*Lord Clarendon.*) No. 22, "Prizes are given "for drawing and marks enough to make the differ-"ence of a place or two at the end of the half year." Have you found that to work well?—Yes, very fairly.

867. (*Mr. Vaughan.*) Who gives the marks for drawing when you come to settle the boys' places?—I do myself, with the drawing master.

868. (*Lord Clarendon.*) No. 23, "Pains have been "taken by successive generations of masters to foster "the public opinion in the school itself" In what way? what public opinion?—A strong sense of truth,

for instance, and a strong sense of the duty of keeping up the good name of the school.

869. (*Lord Lyttelton.*) The sixth-form boys are considered by their schoolfellows as the natural guardians of the good name of the school?—They are.

870. The chapel is a very admirable, solid, and substantial building?—Yes.

871. You say, "All the boys attend the services in "the chapel on Sunday." Is it only used on Sundays, do you not use it for instance on Ascension Day?—Yes; and on Good Friday of course.

872. What other days except Sundays are observed in the school?—The first of November is always observed.

873. All Saints day?—Yes; Ash Wednesday and the 20th October, which is Laurence Sheriff the founder's day.

874. Is that all?—That is all.

875. On those days you have service in the chapel?—Yes, and in Passion Week, the week before Easter there are prayers in the chapel: on the other occasions we have prayers in the great school.

876. Is the whole school assembled there?—Yes.

877. Have they prayers in the houses?—Yes, at night.

878. And in the morning?—On Sunday mornings in the houses, unless there is early service in the chapel. On other mornings there are prayers in the great school.

879. It has not occurred to you that the chapel would be better for that purpose?—I have not thought about it a great deal, but it is a kind of change I should not like to make without being quite sure of its utility; I am sure it would be a mistake to outrun the religious feelings of the boys themselves.

880. (*Mr. Vaughan.*) You think they would not collect their thoughts in the same spirit?—I have asked a great many old *Rugbeans* what they thought of it; all those who were sons of clergymen said they would like to have prayers every morning in the chapel, but those who were not sons of clergymen said they would not.

881. Was that absolutely so?—It was, as a matter of fact. The latter said it would tend to lower the feeling with which the chapel was regarded. Several, for instance, compared it with ———— where they always have prayers in the chapel, and thought the effect there not good. On the other hand several said that the effect was very good.

882. (*Lord Devon.*) The prayers are read by you I suppose?—No, by the masters in rotation.

883. (*Lord Lyttelton.*) "The duty of preparing "boys for confirmation devolves on their tutors or "boarding-house masters," that is, if they are clergymen?—Yes; it is arranged between them with my consent. It is ordinarily the tutor.

884. The morning service is minus the Litany I suppose?—The early morning service is.

885. (*Lord Clarendon.*) Is the attendance at the Holy Communion large?—It is very large just after the confirmation, and then it diminishes as boys leave the school, so that it becomes small towards the time when the confirmation comes round again.

886. Is it usually large with reference to the boys who have been confirmed?—Taking the boys alone, and leaving out the masters and their families, it varies from about 250 down to about 80.

887. Are the feelings of the boys on the subject such as you would desire; is there a reverential feeling?—Yes, there is, certainly.

888. (*Lord Lyttelton.*) How many boys in the school are confirmed?—I could not say at this moment.

889. Half?—120 I should think; we have not had a confirmation for a year now.

890. I thought you said just now there were 250 sometimes?—Yes, there is a very large number just after the confirmation, but at the end of each half year it begins to diminish.

891. The boys who could communicate there are not above 120?—I think at present rather more than that.

892. Does the Bishop receive them under 16?—They go at about 15.

893. (*Lord Clarendon.*) Do you make an address every Saturday before the communion?—Yes.

894. Do the boys attend?—They generally come.

895. Is it voluntary?—It is quite voluntary; there is no marking; no one knows who is there or who is not, but almost all come.

896. (*Mr. Thompson.*) How is the marking effected in chapel?—By an officer at the bottom.

897. (*Mr. Vaughan.*) Is that the meaning of their going out one by one?—That practice arose, I have been told, by accident; but has been continued purposely.

898. (*Lord Clarendon.*) "The religious instruc-"tion of the boys in school consists of the lessons "already mentioned in forms B, C, D, Sunday lessons "every Sunday morning." Sunday lessons in what?—In divinity. They are now in the subjects included in the cycle.

899. "Examination at the end of every half-year, "with a large number of marks assigned to the "subject." In what proportion as compared to other subjects?—400 always, and possibly 650, out of a total 5,000.

900. "The punishments in use are solitary confine-"ment for an hour or two hours." Where are they confined?—In one of the schools.

901. (*Lord Lyttelton.*) Is that at all usual?—A boy in the lower school, perhaps, has not done his lesson, and he is locked up in the school for an hour to learn it.

902. (*Lord Clarendon.*) "Caning on the hand." How is that applied?—The boy holds his hand out.

903. How many blows?—At the outside I suppose half a dozen.

904. (*Lord Devon.*) With a stick or a strap?—With a cane.

905. (*Mr. Vaughan.*) When was that introduced?—I think Mr. Lee introduced it.

906. (*Mr. Thompson.*) Did he introduce it with the sanction of Dr. Arnold?—Yes.

907. (*Mr. Vaughan.*) Is it done at the moment, is there a cane at the master's disposal?—He may have a cane at his disposal. It is not a rule for him to have it, but it may chance so; if not he sends for one.

908. (*Lord Lyttelton.*) As to No. 3; translating or learning by heart may be supposed to benefit a boy, but I wish to ask you whether you are clear that simply writing out Latin and Greek can do any sort of good except by way of suffering, and whether it has not a very dire tendency to deteriorate a boy's hand-writing?—I dare say it may a little damage the hand-writing.

909. Is it a frequent punishment?—I should say so.

910. (*Lord Clarendon.*) It does a boy no good?—It is not intended to do anything but punish him. If you combine a punishment with something that does him good you get him to hate that which does good.

911. Which of the three methods is most resorted to, the writing, out I suppose?—The learning by heart is as common as the writing out.

912. (*Lord Lyttelton.*) These three are put in their order of gradation, and the flogging is very rarely inflicted?—Very rarely.

913. Then, of course, the others are still more rare, so that in fact the punishments at all common in the school are confined to the first three?—Yes.

914. (*Lord Devon.*) The sixth form are exempt from flogging, are they not?—Yes, and it is not used even in the fifth form.

915. (*Lord Lyttelton.*) Practically, I suppose it is according to the size and age of the boy?—Yes, we should not flog a very great boy.

916. What would you call the average of boys that are flogged in the course of the year?—I should call flogging four boys a half-year a very high average.

917. For what offences would such punishment be

RUGBY.

Rev. F. Temple.

13 May 1862.

inflicted?—A boy would be flogged for telling a lie or for bad language.

918. (*Mr. Vaughan.*) For obscene language?—Yes.

919. Or for common swearing?—Yes.

920. (*A Commissioner.*) Do you mean for obscene language privately to another boy if it was overheard?—It would depend of course on what the language was. The last case we had of that sort was complicated, that is to say, a boy used a nasty word and a sixth-form boy happened to be present and told him to hold his tongue, and not use such language as that. He repeated it, and then it was reported to me.

921. (*Mr. Vaughan.*) Was it an insulting word?—No, it was an obscene word; not used to the sixth form boy.

922. (*Lord Lyttelton.*) Of course an immoral act is more serious?—Yes.

923. I should like a sort of catalogue of the offences for which boys are flogged?—It would be very difficult to give that because it would depend entirely on the view the Head Master took of the nature of the offence. A boy would be flogged for very long persistence in anything wrong.

924. For pertinacious continuance of minor offences?—Yes.

925. Does it often happen that parents are requested to remove their boys?—Yes, it happens occasionally.

926. I think it was rather a principle of Dr. Arnold's, was it not, that if a boy was getting no good he thought he was better elsewhere?—Yes; but I think you must distinguish between cases where parents are told that the boy is doing no good, and that they had better remove him, and cases such as are meant here; because there are many cases where a parent is told, "I advise you to remove the boy for "his sake, but I do not insist on his removal." It is not a punishment at all, and in such a case the boy would very likely get a good testimonial as to his conduct. It would be merely stated that for his own good he had better be elsewhere.

927. Expulsion, how often have you had that?—It is very rare.

928. Is it a public expulsion at all?—Simply stating "You are no longer a member of the school."

929. (*Lord Devon.*) Is it declared publicly in the presence of the school?—No.

930. (*Lord Lyttelton.*) Is it on an average once a year?—Yes, on an average once a year.

931. That is for very bad boys, of course?—Rather for very bad offences. I expelled a boy in the sixth form once for knowing of something very wrong and not stopping it.

932. I suppose a very young boy would hardly be expelled?—No.

933. (*Mr. Vaughan.*) Does the caning occur daily?—No; I should think perhaps there might be one caning in the course of three weeks sometimes.

934. (*Lord Lyttelton.*) In one form?—No, in the whole school.

935. (*Mr. Vaughan.*) For gross inattention?—For gross inattention, and repeated irregularity.

936. For acts of contumacy?—Yes.

937. (*Lord Lyttelton.*) Would mere stupidity incur it?—No.

938. (*Mr. Vaughan.*) Does the use of this punishment work well?—Yes; I think that in that respect the school works exceedingly well. I think not only do the masters treat stupid boys with real kindness, but that the boys themselves quite feel that a stupid boy who is doing his duty is to be respected. We have scattered about the school quite low down some very stupid fellows who are quite looked to by all the rest from their character.

939. (*Lord Devon.*) Does the flogging take place in the public school or in private before certain witnesses?—The little boys in the lower school who get flogged because they persist in being disorderly are generally flogged privately, but boys who are flogged for grave moral offences are flogged generally in the presence of four of the sixth form.

940. (*Lord Lyttelton.*) Not of the whole school?—No; even now boys think it a very great aggravation of the punishment to have the sixth form present.

941. (*Lord Clarendon.*) No. 26, "Offences are "also reported to him" (the Head Master) "by the "sixth form, if they are such as the sixth form can-"not or think it better not to correct themselves." Does this produce any illwill towards the sixth form or are they deterred by fear of the result, do you think?—I do not think one or the other. I do not think there is any illwill, nor do I think they are deterred from fear at all.

942. (*Mr. Vaughan.*) Do they commonly report offences to you?—I suppose it happens about three or four times a half-year.

943. (*Lord Lyttelton.*) It is their duty to report to you direct, not to the under masters, is it not?—They report to me direct. In the case of offences happening in their own boarding house they would go to the boarding-house master first.

944. But if it happened in the school close they would come to you?—Yes.

945. (*Mr. Vaughan.*) Are there many classes of offences which they cannot correct themselves?—There are offences which I should not consider they were justified in correcting themselves.

946. Have they occurred so often as twice or three times in the half-year?—No; those were cases in which the sixth-form boy did not feel able to decide on what ought to be done; it was not that the offence was of such a nature that I should have objected to his correcting it.

947. (*Lord Lyttelton.*) How does he punish them?—He may set him lines or he may give him a caning over the shoulders.

948. (*Lord Clarendon.*) The sixth-form boy must hear those lines?—They are almost always lines to be written out.

949. (*Mr Vaughan.*) He may not kick him or strike him with his fist?—No.

950. (*Lord Devon.*) Does the power of punishing in that way extend to the twenty?—A boy in the twenty cannot punish.

951. Can he inflict it on a twenty boy?—A sixth form may give lines to any boy not in the sixth.

952. (*Mr. Vaughan.*) Is there any understood limit as to the number of blows he may give him?—I think the real check is that the boy may always appeal.

953. Do you mean before it is done?—Yes, he can appeal to me at any time.

954. (*Lord Lyttelton.*) Is that often done?—It happens every now and then; he can appeal also to the whole of the sixth.

955. (*Mr. Vaughan.*) Does the sixth-form boy not do it on the spot, or does he appoint a time to administer the punishment so as to admit of an appeal?—No; he can administer it on the spot, but the boy can stop him by appealing.

956. (*Lord Lyttelton.*) Looking at the remarkably small difference of age between some of your boys in different forms, does it really happen that a boy of 18 is allowed to punish a boy of 17?—It may certainly happen.

957. May he cane him over the shoulders?—Yes, if not in the fifth or twenty.

958. (*Lord Devon.*) Supposing a sixth-form boy sees a boy committing some offence, and he is going to cane him on the spot, and that the other boy says "I appeal to the sixth form," do you believe that universally it would be the practice for the sixth-form boy to hold his hand?—I do.

959. Does a gathering of the sixth form often occur to hear such appeals?—I do not think they are very frequent, but I have known instances.

960. (*Mr. Vaughan.*) You used the word "cane" did you really mean a cane, or an ash plant, or any small stick a boy might have in his hand?—I suppose he would use either.

961. (*Lord Lyttelton.*) Do the sixth-form boys habitually walk about with sticks to be prepared for

such an emergency?—No; they always have a stick on certain occasions, if they are the præpostors of the week.

962. On what occasions?—At calling over.

963. Is a boy more likely to commit offences at calling over than at any other time?—No; but the prepostor has a cane then to keep order.

964. Have you mentioned here all the special duties of the sixth form?—I think so.

965. (*Lord Devon.*) What are the rules of the school which apply to all below the sixth and from which the sixth are exempt; take bounds, for instance, have the sixth no bounds?—There are certain parts of the town from which the sixth are prohibited like the rest.

966. Have they a more extended range?—They may go down to the railway station.

967. (*Lord Lyttelton.*) What are their exemptions?—They are very trifling.

968. (*Lord Devon.*) If they are to detect others in going over bounds, of course they cannot go over those bounds themselves?—Yes; but they have a few trifling exemptions.

969. (*Mr. Vaughan.*) As to the managing of the school close, is that in the hands of the sixth form?—No; it is in the hands of what is called "the big side levee." The big side levee consists of all the boys in the upper school, and they make regulations for the games, and they have a right to tax the whole school, subject to the approval of the Head Master, and subject further to this condition, that they themselves pay twice as much taxation as the boys below.

970. (*Lord Clarendon.*) As to No. 29; I think it would be very desirable to have your opinion on fagging in general. Would you say, that fagging such as exists at Rugby, and I think it is very clearly defined, is, on the whole, a healthful relation?—I have no doubt about it.

971. (*Lord Lyttelton.*) Whom do they fag?—The sixth form fag the boys below the upper school, so that the boys in the twenty, in the fifth, and in the lower fifth, can neither fag nor be fagged.

972. Have you ever heard it as a grievance that they have no opportunity of fagging?—With us the fagging is so entirely associated with the responsibility of the sixth, that I do not think it occurs to anyone to desire it.

973. (*Mr. Vaughan.*) Do fags wait upon them at meals at all?—No.

974. Nor do anything for them?—At supper they fetch them bread and cheese.

975. (*Lord Lyttelton.*) Do they toast the bread for them?—Yes.

976. (*Lord Devon.*) I presume from this that they do not do what used to be done in my time at school—clean shoes?—No.

977. (*Mr. Vaughan.*) "The sixth form have also "the power to compel all boys to take part in the "games who are not exempted by authority." Is there no what is called fagging out at cricket?—The fagging at cricket has very much disappeared.

978. Supposing a sixth-form boy sees a boy under his jurisdiction, or two or three boys standing together, has he the power to say to them, Come and fag out?—Yes.

979. And he will be bowled to by one boy, and as he strikes the ball they will range round and will "fag out" for an hour and a half perhaps?—He has the power, but it is very rarely exercised.

980. With regard to racquets, is there any attendance of the same sort?—None at all.

981. At football have not the sixth power to compel the attendance of smaller boys?—They can compel them to take a regular part in the game.

982. They can compel them only to take the same part in the game as they themselves take?—Yes.

983. (*Lord Lyttelton.*) In what view is it looked upon here, where a boy is required and compelled to attend or to play at cricket, or at football? that it is in order that he may take a part in the games of the school, or that he does it for the convenience of those above him?—The attendance at football is simply to take a part in the games of the school.

984. A boy cannot play at football without learning the game?—Yes, he can. That was the oppressive fagging when I came, which I abolished.

985. And cricket?—There is very little cricket fagging. The power still remains and still is exercised occasionally.

986. I understand that a boy is required to play at football because it is considered a good thing that he should do so, but he is not required to play at cricket for the same reason?—Not quite for the same reason.

987. He is not required to learn cricket, but he has to learn football?—Yes.

988. (*Mr. Vaughan.*) Is he required as fag at cricket, to take that part of the game from which he gets no good at all?—Fagging at cricket does not teach him the most important part of the game, but it does teach him to field.

989. When football is played have the lower boys any opportunity of playing a game of their own at the same time?—Yes; at football when the big-side football is played, with the exception of four afternoons in the course of the half-year, the rest of the close is covered with little-side games.

990. How many for instance can be played or are ever played at the same time?—I have known five other matches going on at the same time.

991. (*Lord Lyttelton.*) And how many games of cricket going on at the same time?—I have known seven.

992. I understand cricket fagging is very much diminished?—Very much, there is hardly any of it.

993. (*Lord Clarendon.*) No. 30; "Instances of "the gross abuse of the power of fagging would be "sure to come to the knowledge of the masters if "they were at all frequent." Do you feel confident that that would be so?—Yes.

994. By what means?—Because the tutors would be quite sure to hear of it. They see the boys so much individually, I am quite certain that anything like a gross abuse of the power of fagging would be known.

995. (*Lord Devon.*) If a sixth-form boy abused such power would another sixth-form boy think it necessary to inform of it?—If he thought it very gross he would bring it before the sixth form.

996. Before reporting it to you?—Yes.

997. He would have the moral courage to do that?—Yes.

998. (*Lord Lyttelton.*) The second sentence is very important here, "the sixth is too small a body "to hold its power by force?"—Yes.

999. (*Lord Devon.*) Would public opinion support a sixth-form boy in inflicting punishment on a boy three inches shorter?—Yes.

1000. (*Lord Clarendon.*) With respect to what is generally termed bullying, there is very little of that, is there?—Very little at Rugby. The public opinion of the school is exceedingly sound upon two points. It is very sound upon truth, and it is very sound upon bullying; I am quite sure of the body of the school on those two points. It would not only resist bullying, but it would resist indignantly.

1001. (*Lord Lyttelton.*) There is one point with regard to the truth of the boys. Everybody knows that at schools they often have a certain code of their own about truth; that a thing which they would be ashamed to say to anyone else they would think it fair game to say to a master. Do you think that towards the master they have a strong feeling of the absolute duty of telling the truth?—I do.

1002. (*Mr. Vaughan.*) Supposing a boy of no authority, one of the lower boys, were to see a boy bullied how would public opinion be got at?—He might go and tell the sixth, or he might speak out at the moment.

1003. (*Lord Lyttelton.*) As to No. 32; "Besides "this every boy is allowed leave of absence on the "request of his parents once in a half-year from "noon on Thursday till night on Saturday, or from

RUGBY.

Rev. F. Temple.

13 May 1862.

"noon on Saturday till night on Monday. About "a third of the school avail themselves of this "privilege." Are they those generally speaking who live tolerably near to Rugby?—Boys who live in London a great deal; not boys who live a long way off.

1004. (*Lord Clarendon.*) Rugby is divided into two terms. Most other schools such as Harrow and Eton are divided into three. Has that always been the practice at Rugby?—I think so; but I believe there were at one time very short Easter holidays.

1005. Have you ever considered whether the period is not too long?—I do not think it too long, I think our system in reality the best, though I cannot deny that it is not so convenient for a great many of the public.

1006. Do you not think that such continuous application and labour is too much both for masters and boys?—I do not think so.

1007. You do not find any slackness towards the end of the time?—Quite the other way.

1008. (*Mr. Vaughan.*) Have they examinations?—They have.

1009. (*Lord Clarendon.*) The masters?—Yes.

1010. (*Mr. Vaughan.*) Putting other considerations out of the question, do you not think that for the learning of the boys and for their work it would be better for them to have a shorter intermission from work oftener in the year?—I think it would be better for little boys, but not for boys of the average age of the boys here. I think there is always something lost at the beginning of the half year, and there is something lost at the end; three of those changes make a real hole in the work.

1011. (*A Commissioner.*) You think there is a little demoralization at the end?—I think so.

1012. (*Lord Devon.*) I suppose when you speak of the convenience to the public you refer to the fact that the holidays at Rugby do not fall in the vacations of any public men?—I do. On the other hand a great many of our boys come from long distances, and to have the expense of a third journey would be a serious objection.

1013. (*Lord Lyttelton.*) You say here they work eight or nine hours a day, of which as I understand something under one half is really in school, the rest is all preparation and extra work. How about the play hours. You say that on a full school day they have not above two hours for play?—I think on a full school day they would not have more than two hours if you leave out the meals.

1014. You say, "After seven there would perhaps "be work for another hour or two." You mean there would be some time for rest, that would not be for play?—Yes.

1015. (*Mr. Vaughan.*) "Never more than this." Does "never" apply to any time, or to any part of the school?—I mean that the work is never more than this in different parts of the school, or at different times of the year. Of course I do not mean that they do not work more than this, I mean they are not required to work more than this.

1016. (*Lord Lyttelton.*) The regular work would not take more than that?—No. I think a boy doing his work thoroughly well would on the whole school days be required to work for between eight and nine hours.

1017. Of course you could hardly restrain a strong active boy from working as much as he likes?—No.

1018. (*Lord Devon.*) Out of the eight or nine hours, how much would be spent in school?—In this particular case there are three school lessons requiring preparation, that would be three hours, one with his tutor requiring preparation, and one school lesson not requiring preparation.

1019. (*Lord Clarendon.*) As to No. 39, is the close 11 acres?—Thirteen acres, I believe.

1020. (*Lord Devon.*) That includes your school buildings?—Yes, I think it does.

1021. (*Lord Clarendon.*) We have seen the volunteers this morning with great satisfaction. What are the numbers that are generally drilled?—The numbers that are drilled who are not in the rifle corps are generally about 16 or 17. The rifle corps has in it now, I think, 93.

1022. Is their attendance at that rifle corps voluntary?—The rules for the attendance are made by themselves. The rule is that there should be three drills a week, and every member of the corps has to attend once; if he does not he is fined.

1023. Do you think there would be any advantage or otherwise in making it compulsory to join the rifle corps?—No, I do not think so.

1024. Do you think it would be an advantage to make the drill compulsory having joined?—As far as the corps is concerned in itself I think it works very much better being left to the boys to manage and to make their own rules. It is possible, of course, that if we were an enrolled corps Government might give us advantages enough to compensate for the loss of some of our liberty.

1025. If a boy joins the rifle corps he is not permitted to leave it, is he, till the end of the half-year?—No, he must join either at the beginning or the quarter and must remain till the end of the half-year.

1026. The 16 or 17 you mentioned as not being in the volunteers, I presume are all under age?—Yes.

1027. I see you say that boys remarkable for their intellectual studies are also remarkable for athletic pursuits?—I think it is so very frequently; far more frequently than the world believes.

1028. (*Lord Clarendon.*) At the end of No. 43 you say, "We have now 14 masters to 463 boys, "giving 33 boys to a form," You think that is rather too many?—I think 33 is rather too many, because when you have an average of 33 the inevitable result is that some of the forms would be 38, or something like that, and that is really too many.

1029. An average number of 26 would be a great deal better?—Yes.

1030. If you had the means both of space and funds would you like to make that change?—Yes.

1031. With respect to the want of funds, you say, "The school fees are now 15½ guineas and might "be raised to 20." Would you recommend that?—I should decidedly.

1032. Do you think that that would not operate injuriously?—Certainly not.

1033. I mean it would not be complained of by parents?—I do not think it would cause complaint; the increase of expense would be small, the gain in teaching great.

1034. (*Lord Lyttelton.*) The question, I should suppose, whether the public would afford more than it now does for a school of this kind would be very much illustrated by the question what the demand is at the present moment as measured by those who come here for admission; is it not the fact that you are obliged to refuse every year a great many more than you admit?—Yes.

1035. That shows that the school would bear an increase in its charges?—Yes.

1036. (*Lord Devon.*) Have you ever calculated, supposing this addition to be made to the charge, what additional teaching power it would give you on an average? I mean how far would it reduce the number?—It would give certainly four new classical masters.

1037. (*Mr. Vaughan.*) You mention the pleas that have been urged in favour of physical science and mathematics, such as the discipline which those studies give to the intellect and the general tone of mind which they produce. Are you of opinion that physical science is of slight value in this respect?—I think physical science is of very considerable value in that respect, but not to be compared with literature.

1038. Supposing that a person of first-rate scientific attainment, but of inferior classical attainment, were to give an opinion depreciatory of the value of classics as an elemental discipline, what value should you attach to such an opinion?—I cannot say that I should attach great value to it.

1039. You consider that neither mathematics nor

physical science touch the strictly human part of our nature. Do you not think that they tend to produce many wholesome moral emotions. I am speaking now of natural science, such, for instance, as wonder and admiration at the order of the world and so forth?—I think that in the present state of civilization, physical science to a very great extent tends to cultivate and refine all the emotions connected with the love of order and beauty; but I think that it never rises to touch the sense of personality or responsibility, the sense of being yourself a person and having to deal with other persons.

1040. Do you not think that the contemplation of the physical laws of the universe tends to produce a high degree of awe and admiration, and, of course, so far as that is connected with the workmanship of an Omnipotent Being that it tends to produce feelings towards Him of a very high order?—I think physical science does that very much, and that is what I meant by speaking of it as cultivating the love of order and beauty, which rapidly leads to a sense of religion; but I do not think it can be compared for one moment, in the power of cultivating those emotions, with the study of literature, and, indeed, I think that to a very great extent physical science itself owes already a great deal of its power in that respect to the literature which has been gathered round it. I think, moreover, that those emotions are but a small part of our moral nature.

1041. Do you think that in any point of view literary studies produce that state of admiration and awe, and so far of worship, which physical science tends to produce. Do you think it brings before the mind works and evidences of a nature to produce the same moral emotions, or in the same degree?—The study of literature appears to me to cover almost all that physical science could cover, and very much more besides. There is hardly anything you will find in physical science, which you will not find in different departments of literature. There is no sense of awe or love of beauty which you will not find, I think, more powerfully brought to bear on the mind from the study of poetry even than from the study of any science, because in the study of physical science there is always the drawback, that in order to indulge in those emotions, which the science is certainly able to excite, you are obliged for the time to quit the science, and to give yourself up to something with which the science itself has nothing to do. It is not the science which, as a general rule, cultivates the love of order and beauty so much as the objects to which that science is applied.

1042. Does not the science bring out truths, which truths are almost necessarily the moving causes of those emotions, so that it would require a person to suspend the natural action of the mind, and to arrest it at that point to prevent those emotions. I mean the contemplation of the laws of gravitation, or such laws as those. Do they not necessarily act on the mind to produce those emotions unless the mind puts a sort of force on itself to prevent them?—I should not be prepared to deny that. I do think that all that can be done by physical science in that way is covered entirely by literature.

1043. (*Lord Lyttelton.*) These two sentences in your answer seem to show what you mean. "Man's "chief business it is said is to subdue nature to "his purposes, and these two studies show him "how; those who use this plea seem to forget that the "world in which we live consists quite as much of the "men and women on its surface as of the earth and "its constituent materials. If any man were to "analyse his own life he would find that he had far "more to do with his fellow-men than with anything "else. And if therefore we are to choose a study "which shall pre-eminently fit a man for life it will "be that which shall best enable him to enter into "the thoughts, the feelings, the motives of his fel-"lows." It is in that special sense I take it that you use the word humanizing?—When I say that the study of literature humanizes, I mean that it cultivates that part of our nature by which we are brought into contact with men and with moral agents.

1044. (*Mr. Vaughan.*) As in your judgment the opinion of a first-rate scientific man who is not a first-rate man in classical attainments depreciatory of the disciplinary value of classical attainments, is not of very high value, so would you think that the opinion of a first-rate classical scholar not having the same rank scientifically, and tending to depreciate the disciplinary value of scientific attainment was also not of very great value?—No, I do not think it would be in the same degree at all because it is essentially a part of the one kind of study to know human nature and it is not a part of the other. The one is naturally led to the study of man, and to the study therefore of what is good for the discipline of the mind; the other has not studied man but things: and it is not his business to know what is good for the discipline of the mind. The study of the philosophy of the question comes properly within the sphere of one man's science, but not properly within the sphere of the other man's science.

1045. Then you must permit me to ask you whether you do not think that the truly valuable opinion that is to be formed upon the value of classics as a discipline is to be derived from experience of that discipline, and that in the same way the truly valuable opinion which is to be formed of the value of scientific attainments as a discipline is to be formed from experience of that discipline?—Certainly.

1046. Do you not think that the necessary result of admitting that is that the great classical scholar is not a first-rate judge of the disciplinary value of natural science, and that the great natural scientific philosopher is not the best judge of the disciplinary value of classics?—To a certain extent that is true, but I did not take the case of the great classical scholar who knew nothing of natural science. In order to judge of the disciplinary value of such a study it is not necessary to go quite up to the very top, but you can judge of the effect of the study upon the average of students, even though you have not attained to the very highest eminence in that study. The materials of the judgment are to be supplied by experience; but the use of those materials, so as to make the resulting opinion of value, does not depend on experience of the same kind.

1047. Do you not think that the same principle which you establish with regard to the one it is but fair to establish with regard to the other, and that if you do not require the highest scientific attainments to judge of the disciplinary value of science so in the same way you cannot require the highest classical attainments to judge of the disciplinary value of classics upon average students?—No; because the judgment of the point is within the chief province of the one man, and lies out of the chief province of the other man.

1048. You think then that classical attainment necessarily involves a greater knowledge of the laws of the intellect and of the human mind than scientific attainment?—I do.

1049. (*Lord Clarendon.*) To go back to the previous question, supposing these fees were raised to 20 guineas you would get a greater teaching power, and you would then recommend that money should be borrowed in order to give you greater building power?—I should be prepared to recommend it.

1050. In the event of the Trustees agreeing to that, do you believe that there would be the means to be found here of buying either land or houses?—I have not a doubt upon that point; a part of the school property, moreover, might be used for building new schools.

1051. (*Lord Devon.*) What part is that?—Down behind the chapel.

1052. (*Lord Clarendon.*) No. 44. "I cannot sug-"gest any change in our system of education; by "degrees the present system may be much im-"proved." In what way do you contemplate that?

RUGBY.

Rev. F. Temple.

13 May 1862.

—I think that the work is improving year after year, and may be very much improved yet.

1053. (*Lord Lyttelton.*) That is an alteration not in the system itself, but in the working of the system?—Yes.

1054. You mean without any alteration of its constitution?—Yes.

1055. (*Lord Clarendon.*) You say, "The studies "pursued at a public school, and the method of study "do not always give a boy the precise thing that he "wants for immediate use in life, but they give a "training which enables him to study almost any-"thing afterwards with ease." Do you consider that as of general application, or that it only applies to a diligent boy who has turned the school system to account?—It has a general application in this sense, that a diligent boy would find, as compared with a diligent boy under any other system, that he had got that training, and an idle boy under this system would have the same advantage over an idle boy under any other system.

1056. (*Lord Lyttelton.*) I understood you yesterday to say that you were perfectly well satisfied with the practical working at present of the school with respect to its government?—Perfectly.

1057. You think it is likely to work as well as any other plan that could be devised; to have a reasonable number of Trustees, who have almost unlimited powers in theory, but who delegate them entirely in practice?—I do not wish any change whatever.

1058. And if you had a new school to constitute, you do not see any other system which would be likely to work better?—I do not. I think it of very great importance that that superior authority should not be on the spot, independent of the question of whether he will interfere or not; because there are things which will occur which he had better not know, and which if he is on the spot he cannot help knowing and acting upon.

1059. You think they should be a dispersed body?—Yes. If there be one man, a visitor, that he should be at a distance.

1060. (*Lord Clarendon.*) What do you consider are the advantages of having that external authority?—I think it satisfies the public; very often it is a great strengthener to the Head Master.

1061. You say, "It is exceedingly difficult to find "any men who can teach French and German, and "at the same time form the minds of the learners." Do you say that from experience?—I should say so from experience. They do it here, but it is difficult to do. In filling up any mastership here, I think there is none which would give me so much trouble to fill up as one of the modern-language masterships.

1062. You say, then, that in fact those masters do form the minds and characters of their pupils?—There is no doubt about it.

1063. (*Lord Lyttelton.*) As to what the French call "bifurcation." I understand your opinion to be that it is better to leave the general system in the older schools unimpaired, and that in the present state of this country it would be wise for those who have the means of doing so to give the utmost facility for establishing new schools involving modifications of the existing system. But with regard to the old schools, assuming a boy stays at one of these schools from the age of eight, nine, or ten, or thereabouts, up to the age of 18 or thereabouts, would it be in any way an essential injury to the principles of the system if, in particular cases, you were to modify the general principle of education, say at the age of 16, and after that time give the boy, to a considerable extent, a relaxation from classical studies, taking classics still as the main element, but giving him increased liberty to follow another course of study?—It is impossible to foretell how such a system would work, and any man's opinion on it must be taken simply as an opinion, because it is really prophesying in the dark. My own opinion would be very decidedly against it. I think that a school like this would lose very much more than afterwards it would gain. It would have such a tendency to break the school in two.

1064. But to some slight extent, at all events, is it not the case now here?—Yes.

1065. I mean if after some time you ascertain that some important details of classical work have ceased to be of any sort of use to a boy, then you relax the system in respect to that boy for the remainder of his time?—We do; that is the principle, but it is a principle guarded so very closely that no one would call it a bifurcation of the school at all. By a bifurcation, would be understood such an extension of that principle as to have a large department working side by side with the ordinary classical work, and that I think would not work well. I cannot say that I quite agree with Mr. Charles Evans in his view of what those boys gain or lose in the school. If you think simply of the intellectual discipline which those boys get, I grant that it is very small, but I doubt whether they would get much better discipline, as far as mere mental discipline is concerned, from any other system; I doubt it very much, and I am quite sure that they would lose very considerably in real cultivation.

1066. It has not, I apprehend, been tried anywhere?—Not in that way; not completely. It is tried at Cheltenham. There there are two distinct compartments working side by side. Again, it is tried at Marlborough. Marlborough is a very good instance.

1067. (*Mr. Vaughan.*) I suppose that bifurcation would involve a change in the whole system of the school;—it would involve the doing away of the system of governing by a single form?—No, I think not. At Marlborough if a boy goes into the side line he never gets into the sixth.

1068. In that case you have two systems, and one set of principles, which act on one system, but which do not act on the other?—Yes; I may confess that my inclination on first coming here was strongly in favour of bifurcation.

1069. For another purpose and with reference to the list of Rugby honours at the University, I wish to ask you as a matter of fact, whether there have not been a great many scholarships opened at colleges for classical and mathematical attainments during the last four or five years?—Yes.

1070. Are not the good scholars of Rugby beginning to derive great benefit from their successes in these competitions?—Yes; it is now I think an exception for a boy who leaves this school with an exhibition not also to have already got an open scholarship at one University or the other. We gave six exhibitions last year, the exhibitions varying from 40*l.* to 80*l.*, and I think five of the winners had also got scholarships. I think no one of the five had less in that way than 120*l.* a year, and some had 150*l.*

1071. (*Lord Lyttelton.*) There is a question arising on Table C. In the sixth form (your highest form) I find there is no English verse original composition and no Greek original composition of any kind. If I had looked no further I should have taken it for granted that as the sixth form did not do it no one else did, but I find that in the fifth form second division they do compose two copies of original English verse, and even in the upper middle form first division they compose occasionally both English verse and prose, so that the upper part of the school does none of these things when the lower part is doing them?—You observe that is two copies in the whole year. The master had a fancy to give his form Greek verse to do.

1072. It is not necessarily so?—No.

1073. The sixth form might have it at another time?—Yes; it did so happen that in the course of that year there was no such thing.

1074. Greek original composition is perhaps the highest attainment of all?—Perhaps it is.

1075. (*Mr. Vaughan.*) I would ask in the same

RUGBY.

Rev. F. Temple.

13 May 1862.

direction why it is that there is a systematic cultivation of English composition, in three or four lower forms ending with Mr. Arnold's form, that is to say, the second division of the fifth form, which is discontinued in the upper part of the school?—I think you will find it is systematic nowhere except in Mr. Arnold's form. It is two or three copies a-year.

1076. It is systematic as being found in three or four forms?—That is a mere accident. The masters are allowed a discretion as to that.

1077. There is one case of 20 copies in Mr. Arnold's form?—Yes.

1078. That is not occasional, as the Greek was? It is 20 copies of English prose translation?—Yes.

1079. And in the form below there are also copies though they amount to few?—Yes.

1080. Of course with regard to English, there may be a reason for not having it often, but it occurs in all those forms?—It merely represents the discretion of the master.

1081. But still it does appear that in one lower form there is a great deal, and in other forms an occasional amount of English composition which is dropped entirely in three upper forms?—It is not dropped in the sixth.

1082. Why is there no repetition of Greek verse in the sixth form? There is a great deal of repetition of Latin verse, Juvenal, Lucretius, and Virgil, but none of Greek verse?—The only reason is that the Latin verse is so very much wanted. There has been repetition of Greek verse in the sixth form.

1083. You think the Latin more useful?—Yes; I do not say I should always think so, it would depend on the boys.

1084. Is there any reason for there being no repetition of Latin prose either in the sixth or in the twenty?—No reason at all except that verse was thought more useful. There has been at other times; though not in this year.

1085. Is there any particular reason for there being no English repetition. There is a great deal of English repetition in the form below, but no English repetition in the sixth and twenty?—Simply that the other is more wanted.

1086. (*Lord Lyttelton.*) Do you think that with a view to the power of accurate expression in English, there is enough done in the way of translation into English generally?—I should say yes.

1087. (*Mr. Vaughan.*) Is it found easy with the variety of work that is given to the different forms in the upper school, to frame an examination which shall give the same papers to all of them?—It is tolerably easy; they are not examined in the whole of the work done in the form.

1088. You take the common points?—Yes, and give special papers to special forms.

1089. Then there are some special papers?—Yes.

1090. I understood that all the forms in a particular branch of the school had the same papers?—They have very nearly. That describes the bulk of the examination, but we modify that to meet particular cases.

1091. (*Mr. Thompson.*) I see there is no English verse; I suppose that is accidental?—We have set English verse in the sixth form, but it is very rare indeed.

1092. (*Mr. Vaughan.*) What I observed with regard to the work of the parallel forms generally applies also to the repetition, that the repetition in one form is totally different in its character from the repetition in a parallel form?—Yes; I think it is quite different. I do not think they have ever been kept together in their repetition.

1093. May I ask whether you do not think that to save the time that is given to classical studies is of great importance, and that for that purpose the organization of the work that is to be done in each form is of great importance: I mean the forming of it all into one system, and making it all coherent and part of one single plan?—I think it of great importance that it should be complete, but it is absolutely necessary in order that such work should be perfectly healthy, that there should be large discretion left to individual masters. A really able man will not teach so well if you tie him up too tight.

1094. Why do you teach Greek verse before you teach Greek prose?—We consider that as a general rule, Greek verse would be very much easier to teach than Greek prose. With the exception of mere single sentences, I should say it was much easier to teach Greek verse than Greek prose, as it is easier to teach Latin verse than Latin prose.

1095. Is that the principle you act on in Latin?—Yes; we teach free verse before free prose.

1096. (*Lord Lyttelton.*) What is the first Latin verse you begin with?—Penrose's Exercises. The boys get into free verse much sooner than free prose. They begin with prose when they have to translate a word of English into a word of Latin; in doing verse they come to translate a line of English into a line of Latin.

1097. I do not quite understand what you mean by free verse and free prose?—I mean where you take a line of English, and translate it into a line of Latin. In the other case you translate a word of English into a word of Latin. There is much greater freedom in the verse than in the prose, and altogether the verse must precede the prose. I find it to be so quite as a rule. I should have said, that in any public school you would have found this.

1098. (*Mr. Thompson.*) For one man who can do Greek prose, there are two or three who can do Latin prose?—I should think you would find a larger proportion than that. To write good Latin prose is a rare accomplishment for a boy, but Latin verse is a thing you can get from every boy. You can get it as good from a boy as from a man very often.

1099. (*Mr. Vaughan.*) Is it accidental that the study of English history is begun and dropped again, and the study of classical history is begun and dropped again?—It is accidental, and it was in consequence of observing that, before the Commission had sent us their tables, that we constructed that cycle. That cycle is a sort of instance of how we are perpetually meeting such things.

1100. (*Lord Lyttelton.*) The effect of the cycle will be to make your system *pro tanto* more definite?—Yes.

1101. (*Mr. Vaughan.*) I observe that there are through all the public schools nearly the same exercise books used. How do you protect yourselves from the use of keys upon the part of the boys, where you have so very few exercise books?—The great bulk of the exercises are done in the school.

1102. In the lower part of the school?—Yes, till you come to the fifth.

1103. But I observe, there is an exercise book of that description very high in the school?—Yes; they have that in the twenty. A boy in the twenty would not think of such a thing as a key.

1104. The tone of the school would prevent it?—Yes.

The witness withdrew.

The Rev. Charles Alleyne Anstey, M.A., and the Rev. Henry James Buckoll, M.A., examined.

Rev. C. A. Anstey,
Rev. H. J. Buckoll,

1105. (*Lord Clarendon.*) I do not know that we have any special matters to ask you for information upon, but you have been longer acquainted with the school than anybody here, and we shall be glad of any you may like to offer us, particularly on the early periods of the school, and the changes that have since taken place; and what you think has been the practical effect of those changes. Perhaps one of the first matters to which I would ask your attention to would be as to the consultations which took place

RUGBY.
Rev. C. A. Anstey.
Rev. H. J. Buckoll.
13 May 1862.

before Dr. Arnold's time between the Head Master and the assistant masters?—(*Mr. Anstey.*) That practice did not exist in Dr. Wooll's time. On occasions of disturbance in the school he used to call a meeting of the masters and took their opinion; but there were no periodical meetings at all.

1106. No system?—None whatever.

1107. (*Lord Lyttelton.*) A complete alteration might be made without any formal intercourse with the masters?—Yes; Dr Wooll did not usually consult the assistant masters on occasions of alteration in the school system. They met for the decision of the prizes. The votes were sent in under sealed cover, and the majority decided the prize.

1108. In any question of difficulty would not the Head Master naturally consult the assistants?—Yes, if there was any difficulty.

1109. (*Lord Clarendon.*) When he was in trouble?—Yes.

(*Mr. Buckoll.*) Dr. Wooll used to walk about on the pavement in front of the school gate in the morning a little before second lesson, so that if anybody had anything to say to him they met him there.

1110. (*Lord Lyttelton.*) I do not understand that he was unwilling to hear anything, but that there was no regular system?—There were no periodical meetings.

1111. (*Lord Clarendon to Mr. Anstey.*) In what manner did Dr. Arnold introduce it?—Very soon after he came; so far did he consider these meetings desirable that he proposed and held out for some time meetings of the masters at dinners, where we used to meet and talk over matters connected with the school, and besides that we had meetings once in every three weeks.

(*Mr. Buckoll.*) At one time under Dr. Arnold we had a meeting every morning for about a quarter of an hour before second lesson.

(*Mr. Anstey.*) This shows what the feeling on his mind was; how necessary it was to have the support of the masters, and to consult them and make a common matter of the business and discipline of the school.

1112. (*Lord Lyttelton to Mr. Anstey.*) Did Dr. Tait and Dr. Goulburn continue the same system?—Yes.

1113. (*Mr. Thompson.*) Were the meetings held once a month?—Once in every middle week as we call it. According to an old practice of the school every third week there was a half-holiday, that half-holiday was the time for our meeting.

1114. And you met regularly once a month?—Once in three weeks.

1115. It is stated once a month in the evidence?—Sometimes it was oftener, sometimes not so often.

1116. Do you think that is quite enough?—Yes, unless anything particular occurs.

(*Mr. Buckoll.*) These meetings had been dropped a good deal in Dr. Goulburn's time.

(*Mr. Anstey.*) Yes.

1117. (*Lord Clarendon to Mr. Anstey.*) Do you consider that once in three weeks is sufficient?—I should say so.

1118. At these meetings everything connected with the management of the school is brought forward?—Yes; any changes that may be thought desirable are brought before the masters, and each master is asked his opinion.

1119. And the consequence is what you consider to be a very harmonious working of the school?—Yes, and conducive to the good of the school.

Mr. Buckoll.) It is attributable in a great degree to this that we have so very harmonious a working of the school.

1120. (*Lord Clarendon to Mr. Buckoll.*) I do not know whether there is anything you could suggest as desirable, any alteration in the system; of course you have seen all that has been printed?—Yes.

1121. I believe Dr. Temple communicated with the other masters, did he not?—Yes.

1122. His letter is, in fact, a joint production?—Everything was considered at one of these meetings.

1123. Therefore having been examined at such length, he is, in fact, the spokesman of the rest?—Yes.

1124. (*Lord Devon to Mr. Anstey.*) I should like to ask, as you have been some time at the school, what is your view of the position, powers, and responsibilities of the sixth form, which is rather a distinctive feature in the school; do you attach considerable importance to it?—I do attach very great importance indeed to it; of course there are evils also connected with it. It is obvious to every one that the power may be often abused, but there is an appeal from the authority of the sixth form to the Head Master, which I think keeps it in tolerable check.

1125. Do you think that power of appeal is often used?—Not lately, but there have been instances.

1126. (*Mr. Vaughan.*) Have you often known of cases of the power of the sixth being abused?—Not often.

1127. You have known cases?—Yes; but not lately. I do not know of a single instance in the present master's time.

1128. (*Lord Clarendon.*) Has the authority of the sixth form been in force on its present footing ever since you knew the school. When you first knew the school, was it just the same?—Yes, with the modifications which the different arrangement of the forms required. Thus, in Dr. Wooll's time the fifth (there being no twenty at that time) was the only form exempt from personal fagging, now the twenty and two fifths are exempt.

1129. (*Mr. Vaughan.*) My recollection confirms that of Mr. Anstey and Mr. Buckoll, that it was as stringent when I first came to the school as I have ever heard of its being since.—(*Mr. Anstey.*) Yes; when the rebellion took place in Dr. Wooll's time, that was entirely on a point of discipline connected with the sixth form.

1130. Did not that rebellion injure the school?—I think it did materially.

(*Mr. Buckoll.*) I think in Dr. Wooll's Head Mastership, I mean from the earliest time I knew the school, the authority of the sixth form was of great advantage; it prevented bullying by the big boys in a great degree.

(*Mr. Anstey.*) The system seems to be an extremely good one, of allowing the sixth form to settle little matters without the interference of the master. I think there are many things in the school which are so entirely of a schoolboy character, that the boys themselves are better judges of the proper punishment of the offence than the masters. There are so many things that the boys can punish among themselves better than the masters, and punishments so inflicted are really felt by the boys, even more deeply than if they were inflicted by the master.

(*Mr. Buckoll.*) Even in the earlier times of the school it acted for great good. It has struck me very often since, that in some respects public schools, even then, were not so bad as they have been considered; in their bedrooms at night almost everybody said their prayers, and that practice was protected by the sixth form. The exception was with the boys who did not say their prayers.

1131. (*Mr. Vaughan.*) Do you share my impression, that as to the state of the school before the time of Dr. Wooll's leaving some misapprehension has prevailed.

(*Mr. Anstey.*) Yes. It is quite incorrect to state that the boys in his time did not say their prayers at night.

(*Mr. Buckoll.*) In the time you remember it, there was a great improvement in the school from what it had been before; stealing fowls, for instance, in former times had been a very common thing.

1132. (*Mr. Vaughan.*) Stealing fowls in my time was a thing rare and disgraceful to the offender, and the sixth-form boys found it out when it was

done ?—(*Mr. Buckoll.*) In my time I think some of them would have joined in it themselves. There was a change for the better going on all that time.

1133. (*Mr. Vaughan to Mr. Anstey.*) Do you concur in the opinion that the power of the sixth-form as it exists now in the school, to the fullest extent that exists now, existed even before the time of Dr. Arnold ?—Yes, I think so, certainly. There was one thing which Dr. Arnold did, he legalized the punishment by the sixth. I do not know that it had ever been actually legalized before ; it had always been connived at and considered as a regular thing.

1134. (*Lord Devon.*) Do you both agree in thinking the authority of the sixth form of any importance in keeping up the intellectual character of the school ?

(*Mr. Buckoll.*) Yes, in all respects.

(*Mr. Anstey.*) It requires great watching no doubt, and great intercourse between the Head Master and the sixth form, and a certain friendship and acquaintance with them.

1135. (*Mr. Vaughan.*) Do you recollect individual cases in which the sixth form abused their power in times gone by. I mean individual sixth-form boys ?—I should doubt whether they did it as sixth-form boys ; they did it in spite of their being sixth-form boys, and not in consequence.

1136. (*Lord Clarendon to Mr. Buckoll.*) Has there been any modification introduced into this power of the sixth form to prevent any abuse of it ?—The right of appeal has been introduced. When Dr. Tait was ill for a whole half year, this matter was brought under the serious consideration of the assistant masters, to whom the management of the school was then confided. The sixth form contended that there was no appeal from their power ; we had several meetings and decided that there must be ; it was fully decided then ; any boy may appeal to a master before any punishment is inflicted by the sixth.

1137. (*Mr. Vaughan.*) I do not think that was an understood thing when I was there. It was never dreamt of that a boy might appeal ; of course, he might go afterwards and complain.

1138. (*Lord Clarendon to Mr. Anstey.*) He can now arrest a sixth-boy's hand ?—Yes.

1139. And he can appeal to the sixth in full number, or to the Head Master ?—Yes.

1140. He need not do both ; he may do whichever he pleases ?—He may do which he pleases.

1141. He may arrest the sixth-form boy's hand in the act of punishing ?—Yes.

1142. (*Mr. Vaughan.*) I do not recollect any appeal to the sixth form when I was at school ?

(*Mr. Anstey.*) From the body of the sixth they may appeal to the Head Master.

1143. (*Lord Clarendon.*) You have just alluded to the feeling there was about the boys saying their private prayers of an evening ; is that generally the case ?

(*Mr. Buckoll.*) I think so certainly.

(*Mr. Anstey.*) In my house it is the case certainly.

1144. And a boy is not laughed at ?—(*Mr. Anstey.*) No, on the contrary a boy who did not say his prayers would be thought ill of by his schoolfellows.

1145. (*Lord Devon to Mr. Anstey.*) As to the division of the day, do the boys breakfast with you ?—No ; in the hall, all together.

1146. Do they dine in the hall ?—Yes, and sup ; but not with the master. The master occasionally takes dinner with them. I do not think the habit of dining with them is adopted at any of the houses.

(*Mr. Buckoll.*) Yes ; in some of the houses I think it is carried on ; I was not aware of it till the other day.

1147. (*Lord Clarendon to Mr. Anstey.*) Have you a boarding house ?—Yes, I have.

1148. Where do they dine in your house ?—In their own hall ; and they have a hall expressly set apart for them. It is connected with the house, but is not one of my own rooms.

1149. Are they perfectly satisfied with their diet ?—I think it is a very rare thing to hear complaints.

1150. Is there no difference made between the foundationers and the other boys ?—The foundationers are not in the houses.

1151. They are sometimes ?—Yes ; a few.

1152. I mean in any other respect ; either in the teaching or in the games ?—Not the slightest is recognized by the masters, all the boys are on a perfect equality except by their own fault. Some of the town boys of humble parentage do not join with others, but it is their own doing.

(*Mr. Buckoll.*) I think we must say, in justice to the boys of humble birth, that when their conduct and habits are good and respectable they are not avoided by the rest of the boys.

1153. (*Lord Lyttelton to Mr. Anstey.*) They are marked ?—I do not see how you can avoid it.

(*Mr. Buckoll.*) It depends on the boys themselves.

1154. (*Lord Devon.*) What number do you suppose of the foundationers are sons of tradesmen in the town ; are there a dozen ?—Yes ; there have been more.

1155. (*Mr. Thompson.*) Are they boys who are intended by their parents to be brought up to professions superior to their own ?—Some of them are. It is more from the habits of the boys themselves, just as in the case of non-foundationers, that they get disliked. I know there are some sons of tradesmen here who are treated as well as the other boys of the school.

1156. (*Lord Lyttelton to Mr. Anstey.*) Do you think the tradesmen are aware of that state of things ; and does it operate at all to deter them from sending their boys to the school ?—I think it must.

1157. (*Mr. Thompson.*) Could you say whether it would be desirable to raise on the same foundation a sort of secondary or inferior school, or is the town not large enough ?—I should think the town itself would hardly support such a school if the present rules of the foundation were observed.

(*Mr. Buckoll.*) A committee of masters was appointed to consider the feasibility of this, but they found so many difficulties in the way that the project was abandoned.

1158. (*Lord Clarendon to Mr. Anstey.*) What do the masters and those who keep boarding houses see of the boys on Sunday. Do they see anything of them in the evening, or do they associate with them of a Sunday evening ?—I think the extent of that is not very great ; the numbers being very large, you cannot very well see in your drawing room 30 or 40 boys. Not only on a Sunday in particular, but on other days, I think it is the general practice to see boys frequently and to have an acquaintance with them, and I think it is also the practice in the houses to give a lecture to the boys on Sunday evening.

1159. On religious and sacred subjects ?—Yes.

The witnesses withdrew.

The Rev. C. T. Arnold examined.

1160. (*Lord Clarendon.*) You are an assistant master at Rugby ?—Yes.

1161. How long have you been there ? — Since 1841 ; 21 years.

1162. What branch do you teach ?—Classics. I also for a year had modern languages, but that was only as a matter of convenience.

1163. Had you both French and German ?—Yes.

1164. What part of the school do you take ?—My present form is the lower fifth.

1165. We understand that Dr. Temple's letter has been shown to all the masters, and therefore, that it is a common production of theirs, and that in the very long examination we have had of him, he has, in fact, been the mouthpiece of all the masters, and everything he has said has been in extension and illustration of

RUGBY.
Rev. C. T. Arnold.
13 May 1862.

that. We have, therefore, nothing very particular to ask you; but we wanted to know if you had any suggestions to make in any way; if you think any improvement could be introduced beyond what has been stated here in answer to our specific inquiries?—I do not see the way to any improvement by great changes. I think it is rather to be sought in details, and by having more masters. In truth we are short-handed.

1166. It is stated here, that 35 or 36 is the average number in a form?—Thirty-three, I think.

1167. Would you consider that rather more than can be undertaken without undue fatigue to the master, and with perhaps doubtful benefit to so many pupils?—No, I do not think it is at all too many; I think that in many lessons I can teach 40 or 50 quite as well as I can 30, but one is too sharply pressed; one has too little time. I do not think 30 is too many for teaching in many lessons.

1168. (*Lord Lyttelton.*) Supposing you have a class of 40, your objection to that is, that you are too much pressed for time in teaching them?—I consider that if a master has a form of 33, the whole work of that form is too great a pressure on his time. I understood Lord Clarendon to ask, whether I did not think the teaching of 30 was made less efficient by having so many as 33 in the class. You certainly cannot call the boys up so often.

1169. (*Lord Clarendon.*) It is an average of 33, therefore it is sometimes more?—Yes.

1170. (*Lord Devon.*) How much of the day is employed in the school, and how much in private tuition, ordinarily speaking, by an assistant master. In your own case, for instance?—It is rather difficult to say. Wednesday is a full school-day; three hours are employed in tuition, and the whole of the rest of the day in schol.

1171. (*Lord Lyttelton.*) That is about three hours more?—More than that; fully four hours.

1172. (*Lord Devon.*) Does that include the necessary employment in the evening in looking over exercises?—No.

1173. That comes besides?—Yes.

1174. You have worked on that account necessarily on an evening?—Yes.

1175. (*Mr. Thompson.*) What is the maximum number of hours that a master is employed?—I scarcely know. We have just altered our hours. On Wednesday a master in the upper school really was in from seven o'clock in the morning to half-past nine at night, with scarcely any interruption beyond something like an hour for breakfast, an hour for dinner, and an hour for tea. That has been altered now. On that particular day about which you asked there was a great press, and it would be an unfair day to take.

1176. On the average of the week what would you say it was?—I think it almost impossible to answer that question without consulting the tabular statement of work.

1177. It would depend on the rapidity with which a man worked?—Yes.

1178. (*Mr. Vaughan.*) How many private pupils have you?—I have 50.

1179. (*Lord Clarendon.*) That is practically the limit?—Yes. I have 52, but we are only paid for 50. If one has more it is because some brother of a pupil wishes to come.

1180. (*Lord Devon.*) Have you foundationers and non-foundationers?—Yes.

1181. With regard to the social position of the boys of these two classes in the school, are you aware whether a foundationer would be thought meanly of by a non-foundationer?—Not *as* a foundationer. Not at all.

1182. At the same time they would have some among them who from personal disqualifications, or the station of the father, would be looked down upon?—Yes; but this feeling is much more among the foundationers themselves than between them and the non-foundationers. One sees it, for instance, in choosing boys for cricket, and so on. They will avoid those boys who are not in their own station of life.

1183. (*Lord Lyttelton.*) But simply as a foundationer he would be on the same terms as the other boys?—Yes. The feeling is altered very considerably since I have known the school—during the last 20 years, from the fact of many eminent foundationers being here; eminent for ability, and in a good social position.

1184. (*Lord Clarendon.*) Your opinion, I think with respect to Rugby, and perhaps with respect to public schools generally, is that it would be better to perfect your present system than to introduce any radical changes in it?—Yes.

1185. In the letter you wrote you said you had seen a good deal of foreign tuition?—Yes.

1186. French and German?—German.

1187. And that the result of your reflections on what you had seen was greatly to prefer the English system?—Very much so.

1188. Perhaps you will be so good as to tell us what you have observed, and where?—In the first place, in German schools they have no games. I have seen schools at Frankfort and at Heidelberg, and when the present Principal of Wellington College returned from his visit to German schools, I compared notes with him, and I found it was the same with all. At the great public school at Schulpforte, I am told, they have no games.

1189. (*Mr. Thompson.*) Is that a boarding school?—Yes.

1190. (*Lord Devon.*) Where is that?—In Prussian Saxony.

1191. (*Mr. Thompson.*) I suppose the boys walk out?—Yes; and they have a professor of gymnastics.

1192. Are they taught to swim?—Yes.

1193. By a man?—Yes; they are very good swimmers.

1194. Have they no constitution, no polity in their schools?—No.

1195. (*Lord Clarendon.*) Is there no public opinion there. Is everything dependent on the master, or is the school managed at all by its own individual opinion?—I am not sure that I know enough to be able to answer that question.

1196. Have you any hesitation in saying that public school life is far more healthy and vigorous, and tending to the formation of a far more manly character, here than abroad?—I have none.

1197. (*Mr. Thompson.*) How about the things taught?—The teaching struck me as extremely abstract. There are boys in Germany who, if you examine them about the subjunctive mood and Greek particles, display an astounding amount of knowledge, but if you put them to construe a passage they do it with not half the life an English boy would.

1198. As to their composition, is it better or worse than ours?—I think it is not so good as in English schools.

1199. Not in Latin prose?—I think not.

1200. (*Lord Clarendon.*) Do they ever write Latin verse?—I never saw any.

1201. (*Mr. Thompson.*) Do they not begin Greek very much later in comparison than our boys do?—I do not know.

1202. Can you judge from the tables you have seen?—I should imagine a boy would not begin Greek till 12 or 13; I do not know.

1203. Do you think that boys in public schools in England begin Greek too soon?—I think not.

1204. Would they not get a greater hold of Latin if they began Greek a little later, and would they not learn Greek with greater effect, and have more time to acquire a thorough knowledge of French?—Perhaps they would; French ought to be begun very early; but they begin German too late, for it seems to me that the first difficulties of both Greek and German are of the same kind, that they are of the accidence.

1205. They require maturity of mind?—The declensions, conjugations, &c.?

RUGBY

Rev. C. T. Arnold.

13 May 1862.

1206. No, but the construction of the sentence in German ?—Yes, that requires maturity of mind.

1207. A boy might be taught French who could not be taught German ?—Yes; but German ought to be begun early.

1208. Why ?—From having so many inflections.

1209. Would a boy ever acquire a good French accent who began with German ?—I do not think the pronunciation of either in our English public schools is sufficient to do much to injure that of the other; that is a point which we cannot pretend to help a boy with till he can construe very fluently. He does not often go to conversation classes till within a year of his leaving.

1210. (*Lord Clarendon.*) A master must pronounce certain words to him in the way of reading, and as he hears him read, and accordingly as the master gives him a good or bad pronunciation, he starts, and as he starts he will go on ?—Doubtless the pronunciation of single words may be taught correctly here; but the pronunciation of the whole, the rhythm of the read or spoken language, can only be required thoroughly by reading or speaking with a native, or in the country itself.

1211. Is it your impression that, generally speaking, a boy will have very little chance of speaking French well who has not learnt it before he comes to Rugby ?—Those boys who have learnt it in the nursery have a very great advantage.

1212. (*Lord Lyttelton.*) Do you know of your own experience of boys who began to learn French here, and who could pronounce it well before they had left ?—No; but I have known boys, who, having learnt French and German entirely at Rugby, were able, after a residence of a few weeks in those countries, to read and speak fluently.

1213. With regard to these conversation classes, how are they attended ?—Mr. Vecqueray will tell you more about that; he has had great difficulty with them, I know.

1214. (*Lord Clarendon.*) The modern language department was introduced by Dr. Arnold, was it not ?—Yes.

1215. French was taught here before his time, but I suppose it was made in a manner compulsory by him ?—Yes.

1216. As part of the form work ?—Yes.

1217. (*Lord Devon.*) Are you satisfied with the way in which modern languages and modern literature are cultivated now in connexion with this school ?—I think so.

1218. Would you suggest any improvement ?—No.

1219. (*Lord Clarendon.*) In the German schools you found considerable attention paid to foreign languages, particularly English and French, did you not ?—Yes.

1220. That is quite a part of their curriculum ?—Yes.

1221. (*Lord Devon.*) Do you think they pronounce English better than our boys pronounce French or German ?—That is very difficult to judge of. I do not think they do, because the peculiar difficulty of the English language is in the pronunciation, I mean the irregularity of it. I have heard "youth" pronounced "yowth;" I said, that is not correct; the answer was, "Dear me, you say 'cloud.'"

1222. Is the relation of the private tutor one of a confidential character generally ?—Quite.

1223. So that if a boy got into a scrape he would consult you ?—Yes.

1224. (*Lord Clarendon.*) It is more so if he is also his boarding master ?—Yes, of course. There is not 10 minutes in the day when he is in, that one or other of the pupils is not running up for something or other.

1225. And the boarding master has the general charge of him ?—Yes.

1226. Does it often happen that a boy's private tutor is not the same as the master of the house ?—In three cases; in the school-house, Dr. Temple is not tutor to any one; one mathematical master has a boarding house, and one modern-language master. In fact there are three such houses, containing about 170 boys.

1227. Neither of those masters are tutors to the boys ?—Only to those in the lower school.

1228. I do not know why they should not be ?—Because they are not teachers in classics.

I may say as to the two last questions I most cordially agree with Dr. Temple.

The witness withdrew.

The Rev. Charles Evans, M.A., examined.

Rev. C. Evans

1229. (*Lord Clarendon.*) I will take first the paragraph in which you say, "It must be remembered, "however, that a large number of boys leave Rugby "every year from lower forms, and to most of them I "think our system does but scant justice. I am not "speaking of the idle or the dull, but of a very large "class of boys of good natural abilities and industry "who yet do not reach high positions in the school. "At about 16 years of age their type of mind appears "to reach the length of its classical tether, and how-"ever much worked after that time it takes no polish. "Such boys are constantly passed in the race for "promotion by younger and more apt competitors, "and leave school at 17 or 18 years of age, very im-"perfectly educated, with little Latin and less Greek, "with stagnant and ill-informed minds, if not a "great disrelish for study and application of all "kinds." Surely this applies to the great majority of boys, does it not ?—To one half at least.

1230. You say, "They have never reached the point "at which the study of classics begins to acquire its "greatest value as an engine of mental discipline, and "apart from the moral and social advantages and the "unconscious self-education of a large school, their "last two or three years at Rugby are, I think, "almost unprofitable." Is that the result of your experience ?—Yes.

1231. That the last year or two here is not profitable to at least one half of the boys ?—Not otherwise than socially and morally.

1232. I mean educationally ?—Yes, intellectually unprofitable.

1233. You say, "It is quite true that in many "instances such boys grow into eminent men, and we "are tempted to confound *post hoc* with *propter hoc*, "forgetting how much may be due to natural force "of character and abilities developed in spite of, "rather than in consequence of, their early intellectual "training." I must say that is not a satisfactory result, but that it is the embodiment of the general opinion now with respect to schools, and has created a great desire for inquiry to know whether something better could not be devised for making, as you say, these last two years intellectually more serviceable to the boys; you think that this could be done by what we call bifurcation ?—Yes, I think it absolutely necessary to have distinct departments.

1234. You have considered that the change would be very great and important in its application to an established school with its tradition like Rugby ?—Yes, very great.

1235. In the latter part of your answer you say, that in new schools this would be more practicable than in old ones; but even at Rugby you do not consider the difficulties insurmountable, and think the experiment well worth a trial. In what way would you carry out that experiment, and what results should you anticipate from it ?—I think I should begin in the upper part of the school. I should begin with the formation of a Woolwich class, into which

RUGBY.
Rev. C. Evans.
13 May 1862.

class no boy should be admitted who had not reached at least the fifth form. The fact of a boy having reached the fifth form presumes a liberal acquaintance with classics. I should be prepared to draft off such boys, and boys from the sixth and twenty into a Woolwich class.

1236. Why should you call it a Woolwich class?—I think there is such a demand at the present moment for Woolwich appointments, that we should at once get a large body of promising boys from the three upper forms if we could hold out to them the prospect of their obtaining valuable appointments at Woolwich. But I should not in any way restrict the system of education in this new department to the requirements of Woolwich.

1237. Then you would include under this new system the sixth form?—I would allow boys to be drafted from the sixth form into it.

1238. It would be done at their parents' desire; you would not make it compulsory; it would be entirely voluntary on the part of the boy with the consent of his parents?—Yes.

1239. You would not tell a boy, "You are doing "no good here, you must go into the Woolwich "class"?—We never could put such a pressure as that on a boy in spite of his parents. We could recommend it to the parents; in reality, the decision would rest with us, as in most cases the parents would act upon our advice, but I should not recommend forcing a boy.

1240. Would you desire a boy to leave the school whose parents declined to let him go into the new class?—No.

1241. It would be entirely voluntary?—Yes; I may be allowed to explain why I should begin at the top of the school. I think the great danger in trying such an experiment here would be that this second department would not in the face of the classical prestige obtain a status equal to that of the classical department, so that if such a thing be started here, I think it will be well to begin with the higher class of boys, so as to show the rest of the school at the outset that it is not an inferior department to which they are invited to come.

1242. (*Mr. Vaughan.*) Do you mean a higher form in the school?—I think if the new department were filled at once with boys from the middle or lower school, boys of advanced attainments or great ability would not be willing to go into it, because they would find their social status inferior.

1243. In what way do you think it would act on their social status?—A boy never reaps the full advantage of a public school, at least not at Rugby, until he has reached a high form. He does not mix with the *élite* until he has reached the fifth form.

1244. (*Lord Lyttelton.*) You think the difficulty would be in giving the system a fair start?—Yes, that is a great difficulty.

1245. (*Mr. Thompson.*) Would you continue to the boys drafted off into this subsidiary school the same privileges as the members of the sixth form now possess?—Yes.

1246. (*Lord Clarendon.*) How could a boy still remain in the sixth form, and have all the privileges and status of the sixth form, and yet go into the subsidiary school?—Subsidiary, but not subordinate. The sixth form in the new school must rank exactly on a level with the classical sixth form, or else we should be defeated.

1247. (*Lord Lyttelton.*) You have stated it with very great force in this last sentence: "Even if this," that is, perfect equality, "were secured, the unity of the "school, the strong bond of common tastes and inte- "rests and feelings, so valuable an element in our "present system would be endangered, to say nothing "of the increased difficulty of finding head masters "equal at once to the teaching and general super- "vision of such a double school." You have given full consideration to that?—Yes; but those remarks apply to Rugby in particular; here the welfare of the school depends to much on unity of action.

1248. (*Mr. Vaughan.*) Do you propose this plan for the purpose of assisting the career of boys hereafter, or for the purpose of giving them a good education, or both together?—I think you will find at the end of my answer to question 43, that I have alluded to that. I advocate it not on the narrow ground of special professional training, but in the abstract, as a valuable liberal education.

(*Lord Clarendon.*) You say, "Having acquired "a solid groundwork in Latin and Greek, they "might then be permitted to drop a certain "portion of their classical work (say, versification "and Greek) and devote the time thus gained to ma- "thematics principally, to physical science, history, "and modern language, care being of course taken to "guard against superficial smattering."—That meets exactly what I think are the requirements of the age, and what parents now desire, but know not how to achieve.

1249. (*Mr. Vaughan.*) I understand that you think that a valuable mental education would be afforded by the prosecution of the study of mathematics or physical science?—Combined with a groundwork of classics.

1250. (*Lord Lyttelton.*) Have you gone at all into detail in your own mind with regard to the quantum of Greek and Latin which you would still retain?—Yes.

1251. Can you state at all distinctly how far you would retain classics?—I think, if I had to work it myself for a continuance, I should be satisfied with their keeping up sufficient Latin to ensure a gentlemanlike and familiar acquaintance with a few good Latin authors, say, Horace and Virgil, or Horace and parts of Cicero, committing a great portion of them to memory.

1252. Not as composition?—No.

1253. (*Mr. Vaughan.*) Is it upon scholastic grounds, with reference to the status of the boy in the school, that you would propose to commence that sort of study so late in his career, and for that reason only. You mention, that unless a boy attain to a certain position in the school, "his social status is inferior," and for that reason it was that you recommended the commencement of these studies at that time. Is that your only reason for recommending it at that time?—I made those remarks in reference to the mode of starting such a scheme at Rugby; but beginning *de novo* I should not begin so late as that.

1254. Beginning *de novo* what course would you pursue then?—I should give the same education to all boys up to the average age, I think, of 15.

1255. Would that education which you propose to give up to the age of 15 be entirely classical, or would it contain in it the studies you have mentioned?—It would contain just the *instrumenta cognitionis* which all must have, the elements of mathematics; but the main part of the education would be classics.

1256. Do you think that at the tender years at which you now propose that they should study Latin only, the boy's mind is not fitted for the prosecution of the study of physical science?—I do. I think it is not fit.

1257. (*Lord Lyttelton.*) Not only at the time the separation takes place, but previously, would you diminish the amount of time now given to mathematics, physical science, and so on, and would make it more classical?—I should make the education up to 14 almost identical with the education a boy now gets up to that age, the staple being classics, mathematics, and French.

1258. (*Mr. Vaughan.*) If you look at the returns I think you will see that a boy gets no education in physical science up to 14?—Not often; unless he happens to be a very precocious boy, who is high in the school. It is then competent for him to get such an education.

1259. Have you had an opportunity of forming an opinion as to the powers of the boys at an early period to learn physical science?—I was at a school myself

where mathematics were pressed on the boys at a very early age, but not physical science.

1260. I ask specially as to physical science, conceiving that to be very distinct from mathematics in the requirements which they make on the mind of the learner?—I should say the sciences of observation, such as botany, and a great part of chemistry, are quite open to the comprehension of boys at the average age of 13 or 14.

1261. (*Lord Lyttelton.*) When you say the average age, I understand you to mean that in some cases a separation might take place earlier and sometimes later?—Yes.

1262. According to circumstances?—Yes.

1263. But probably you would not think of it earlier than 14?—No, never.

1264. (*Lord Clarendon.*) Do you not think that in the case of a boy whom you would recommend to go into the subsidiary school and no longer to continue in the sixth form, there would be a sense of inferiority and a sense of shame, that he would consider himself rather degraded? — Not if well started, and the difficulty will be in that.

1265. (*Lord Lyttleton.*) You propose to drop Greek altogether?—I should be willing to drop Greek; but if it were desirable for particular reasons for a boy to continue Greek he should have the opportunity.

1266. (*Mr. Thompson.*) Suppose a boy intended to go to the University of Cambridge, and he is conscious that he has no turn for classics, and has a decided turn for mathematics, you would put such a boy as that in the new department?—If I had to construct it myself I should try to make the new department so good that it would be worth while for a boy of that sort to go into it. The amount of classics he would get would be enough to qualify him for passing the "Little go."

1267. Do you not think, if it were so constructed, that it would admit boys who were intended for the University and for active competition at the University; that in that case it would be looked upon as of inferior importance?—I think not; all would depend on the way in which it was started.

1268. Even as a mere training school for active competition at Woolwich, and the like, you do not think it would entail a loss of caste?—No; I think not.

1269. (*Lord Devon.*) Do you attach high importance to the sixth form in connexion with this school?—Yes; very great.

1270. So that any change in the system which would at all impair the working of that portion of the system would be prejudicial?—I think it would be fatal.

1271. (*Mr. Thompson.*) You could not bring the sixth form into such close relation with the Head Master in the new department?—I think the present Head Master might do it. I think many men could do it. In many lessons they might be combined so as to bring them into contact with the Head Master.

1272. (*Lord Clarendon.*) I do not know whether you have talked of it to any of the higher boys; are you aware what the opinion would be in the school about such a change?—I do not. I fully admit that there are many difficulties in the way; but I think, under a wise Head Master, they might be overcome.

1273. (*Mr. Vaughan.*) With regard to those boys in whom you have observed that the two last years of their school life have been intellectually unprofitable, do you observe that that failure begins to take place at a particular part of their career, or that throughout the whole of their career there has been an inaptitude to those things?—The moment they are called upon to comprehend the finer parts of scholarship they slacken. They get through a certain mechanical part of their work exceedingly well, and they are often very accurate and very painstaking boys, but without taste or any aptitude for the nicer points of scholarship.

1274. You think, as long as they are carried through the grammar and the earlier parts of the teaching of the language they advance as other boys do?—Yes, I do; and I think they are boys who, if carried through large portions of Homer, would have a very great relish for the beauty of the writing.

1275. (*Lord Lyttelton.*) You mean they receive great benefit from what they have done in classics up to a certain age?—Yes, great benefit in the logical training, which the study of grammar gives; but they never read a sufficient amount of classics to make any impression. The moment a boy reaches the upper school a good deal of scholarship comes into play, and unless he is a sharp boy, with a certain aptitude, he will not get on.

1276. (*Mr. Vaughan.*) It seems to me to go a little further, because I understood you to say that you think this is the case with one-half of the boys in the school. So far as I understand your reasons for it, the same reasons would have led me to expect that it would be the case not with one-half, but with the general mass of the school; and that it would be only those who had a great aptitude for classics who would be exception?—When I said one-half, I meant one-half of those who left the school above a certain age.

1277. I thought you meant one-half of the boys. I should have anticipated that you would rather have divided the boys into two kinds; boys that really had had their minds adapted to the finer parts of scholarship who ought to be carried on to those finer parts, and who, of course, would be few, and the other boys, who would be the great mass of the school, who were not capable of that; and so your reasoning and your remedy would apply rather to the main than to anything like an equal part?—I think at this moment it would apply to 200 boys in the school. I think I could pick out 200 who would be better for the new department.

1278. (*Lord Devon.*) What branches of instruction would you include in this second department?—A very few, so as to avoid a smattering. Mathematics, modern languages,—

1279. (*Mr. Vaughan.*) You would include history?—Certainly.

1280. Would it apply to the teaching of natural science as well as mathematics?—There would always be one subject in natural science which I should aim at teaching fully.

1281. I infer from what you say that you consider that physical science commenced at that period of life would carry on the discipline of the mind effectually?—Yes, combined with mathematics.

1282. Do you think that would be essentially necessary?—I think it would be much better, and would tend very much to clearness and precision. I do not propose in any case to drop Latin.

1283. (*Mr. Thompson.*) Would you hear them do their Latin lessons with the other boys?—Yes.

1284. (*Mr. Vaughan.*) You propose to drop Greek, but has it ever struck you that there is another alternative possible, viz., to drop some subject of history?—I do not think you would gain sufficient time.

1285. Take the three branches of history stated here—Jewish history, Roman history, and English history. Suppose a boy to continue his Greek education, would it be impossible, do you suppose, for him to continue his study of the language and to cut off his study of history, and to adopt that of natural science?—Possibly; but all those three subjects do not occupy one-sixth of the time given to Greek.

1286. Does it not strike you that there is gathered round what is called a classical education so much beyond what used to be considered a classical education, which was the mere instruction in the language, that the impediment to additional studies consists not entirely in the study of the classical languages, but in those auxiliary subjects, for instance, history and geography?—I am not sure that I see the meaning of your question.

RUGBY.

Rev. C. Evans.

13 May 1862.

1287. Many years ago classical education was supposed to consist of Greek and Latin, the languages alone; but now there has been a good deal of historical and geographical knowledge that has been added to to that?—Yes.

1288. I wish to ask you whether a part of the impediment to the study of physical science and mathematics is not owing to the amount of time given to those auxiliary subjects that have gradually gathered round?—I think not.

1289. (*Lord Lyttelton.*) I rather inferred from what you said just now that you would think any amount of separation between the boys to be in itself bad, therefore your object would be, whenever you could do so, to continue the boys in the same exercises and working together?—Yes.

1290. (*Lord Devon.*) Without an absolute division into departments, would it not be possible to devote a larger portion of time at Rugby to mathematics and physical science than at present is given without any such interference with the system as would result from the opposite course?—No; we have already widened our curriculum as far as possible. I think if a boy were to attend to anything more we should lose the high finish of our classics.

1291. (*Mr. Vaughan.*) Could you not as to some boys keep the advantage of the classical languages by separating them from the auxiliary subjects to which I alluded?—I think not. I think in geography and history very much is said in a lesson by way of illustration which is part and parcel of the lesson, and if you strike it out, you must get a different class of teacher.

1292. But the special teaching of the existing Rugby cycle of history and geography of several nations might become optional?—I think you will find that the time given to those subjects is one twelfth of the time given to Latin and Greek, so that the gain would be very small. There is only one lesson in ancient history a week.

1293. And in English history?—They are not taught simultaneously.

1294. Are there then only two historical lessons a week?—Only one purely historical.

1295. Is not that one of the subjects which boys learn by themselves?—They have to prepare 150 pages of history, which a sharp boy would do in a few days. Perhaps I may be allowed to say that I consider that this second department would after all give a kind of education inferior to that given at present. I believe that a purely mathematical education will not train the mind in the same way as a classical education thoroughly carried out.

1296. (*Lord Clarendon.*) But you say you do not succeed in thoroughly carrying it out?—Not in many cases; but where successful, the classical system is really the higher education.

1297. If a boy can take it in, and really avail himself of it?—Yes.

1298. But those boys, you say, are few?—The type of mind which cannot take in classics is very numerous.

1299. (*Mr. Thompson.*) But under any system, I suppose, there would be boys who would not do much good?—That is true.

1300. Do you think you would get 20 per cent. more of active industry by the arrangement you propose?—More than that considerably. I should rather say profitable than active industry; many of those boys are industrious, but they do not get on.

1301. As to diminishing idleness, what appreciable effect would it have? It would not be a refuge for the idle would it?—Certainly not, if the standard is pitched high enough.

1302. (*Lord Lyttelton.*) Does there appear to you to be any analogy between this system and the Cambridge system?—I have not thought of it.

1303. I believe the Cambridge system fully admits the principle of bifurcation as something less than one-half of the undergraduates' time is spent before passing the "little go," and he may after that choose for himself the honours he is to pursue?—Yes.

1304. That would be a much stronger case of bifurcation than you propose?—Yes.

1305. But yours would fully adopt the principle?—Yes; I may be allowed to say that with plenty of convenience and with a master mind in the school it might be done.

1306. (*Mr. Vaughan.*) What would you do with the exhibitions in that case?—I have not thought of it.

1307. Do you not think a step would be necessary?—Practically you would find that intending exhibitioners would stay in the classical department, until at least these new subjects command more scholarships and fellowships at the Universities.

1308. In order to give effect to your system would it not be all the more desirable on that account to make changes in the destinations of the exhibitions?—I think not. As it is I find boys willing to enter such a department as affording a better training for practical life at an early age.

1309. (*Lord Clarendon.*) How many years have you been assistant master here?—I shall have been here 14 years at Midsummer.

The witness withdrew.

The Rev. R. B. Mayor and J. M. Wilson, Esq., examined.

Rev. R. B. Mayor. J. M. Wilson, Esq.

1310. (*Lord Clarendon to Mr. Mayor.*) I believe you are a mathematical master at Rugby?—I am.

1311. How long have you been so?—Since 1845; 17 years.

1312. What part of the school do you take?—The school is divided into five divisions, and I take part in four.

1313. Which four?—In all but the lower school, which forms the fifth and last division in mathematics.

1314. In what way do you take those, how often do they come to you?—It varies in the different divisions; the sixth come twice a week to me, and once to Dr. Temple.

1315. What branches of mathematics do they take?—That varies according to the set they are in. The first set does the highest work.

1316. Do you think that sufficient time is devoted to it?—Considering the number of subjects we teach and the time we have, I do not think that the boys in general could give a larger proportion to mathematics.

1317. (*Lord Lyttelton.*) It is about 3 hours a week?—That is the average. The middle school has more; 3½ hours.

1318. (*Mr. Vaughan.*) It is four I think in one case?—Yes; but that set merely does half an hour's work more in school, instead of an hour's work out of school.

1319. (*Lord Lyttelton to Mr. Wilson.*) You are mathematical master as well as teacher of physical science?—Yes.

1320. (*Lord Clarendon.*) In what year did you take your degree?—1859.

1321. (*Lord Lyttelton.*) Do some of the boys become well acquainted with the elements of mathematics?—Yes.

1322. (*Mr. Thompson.*) They do not get to its application at all?—Not in a difficult subject.

1323. Do they reach the elementary hydrostatics?—Yes.

1324. In astronomy at all?—Popular astronomy.

1325. (*To Mr. Mayor.*) What is the highest mathematical degree taken by a Rugby man?—In my time we have had a fourth wrangler.

(*Mr. Wilson.*) There was a fourth wrangler at Rugby three years ago.

1326. (*Lord Lyttelton to Mr. Mayor.*) I suppose the capacities of boys vary very much in mathematics?—Yes.

1327. (*Mr. Thompson.*) What is the propor-

RUGBY.

Rev. R. B. Mayor. J. M. Wilson, Esq.

13 May 1862.

tion of your pupils who are capable of being made to understand the differential calculus?—It varies very much at different times. At present the proportion is very small; I have had three or four times as many as I have this half. In the sixth just now there are only two fit for it.

1328. Do you think as a general rule that boys with good ability for classics, have also good abilities for mathematics?—As a general rule those strongest in classics are strongest in mathematics; almost always.

1329. Is there any difference between pure and mixed mathematics?—We do very little in mixed mathematics, but boys who do well in the one can generally do well in the other.

1330. Do you think there is any preference for pure mathematics in the classical mind?—I have noticed that a few boys, who were rather elegant composers than sound scholars, have been very incapable in mathematics; but the boy who sees through hard constructions will generally do well in mathematics.

1331. (*Mr. Vaughan.*) Have you formed any opinion with regard to Rugby boys, whether those who are high in classical attainments, succeed best in a mathematical or modern language school?—As a rule the strong men drop mathematics, and go on to classics. I have never noticed modern languages. I have never attended to the school lists at all.

1332. Have you observed to which of those two schools, the modern language and the mathematical school, the classical man takes most kindly?—No, I never saw the list.

1333. (*Lord Lyttelton.*) When a boy comes to the lower part of the school, he begins I believe with the writing master?—In the Lower school he is altogether in the hands of the writing master.

1334. As soon as he passes out of the Lower school, does he necessarily come into the hands of the mathematical master?—For two hours a week at least.

1335. He does not at once begin with so much as three hours a week?—When he once gets out of the lower school into the lower middle school, he has then four lessons. He comes twice a week to the mathematical masters, and twice a week to the writing masters.

1336. (*Mr. Thompson.*) Is any part of arithmetic taught by the mathematical masters?—Yes; we are responsible for the entire teaching of the upper school.

1337. (*Lord Lyttelton.*) Is there any man under you?—No. The writing master teaches the Lower school; he has that entirely to himself. The next mathematical division includes three classical forms, which are divided into five sets; he has nothing to do with the first set; the four others go to him twice a week.

1338. Those above come entirely to you?—Yes, except the two lower sets in the upper middle.

1339. Do you teach arithmetic as well?—Yes, the principles of arithmetic.

1340. In any but the lowest division?—Yes, all through the school. In the higher sets chiefly by every now and then giving examination papers in arithmetic.

1341. (*Mr. Thompson.*) Are you satisfied with the arithmetic of the Lower school?—(*Mr. Mayor.*) Certainly not. To do well, boys under 14 ought to give an hour a day to arithmetic, but we have not got the time.

1342. (*Lord Lyttelton.*) Do they come badly prepared to the school generally?—Generally.

1343. (*Lord Clarendon.*) What is about the average amount of mathematics that a boy goes away with from here?—An average boy who leaves at 18 will have gone through the whole of arithmetic, algebra to the end of the progressions, and the first four books of Euclid.

1344. (*Lord Lyttelton.*) You mean without extra private tuition?—Yes.

1345. They have the opportunity of extra private tuition in mathematics?—Yes.

1346. Do you know for how many hours a day a boy fond of mathematics would get private tuition?—He is actually with the private tutor three hours a week, and gives what time he can to preparation before he comes.

1347. (*Lord Clarendon.*) Is he with him three hours a week on mathematics?—That is besides the form work.

1348. (*Lord Lyttelton.*) Conic sections are not done in any set?—No, not by all the boys in any set. With three hours a week boys could not get so high, and keep up a knowledge of the lower subjects.

1349. (*Mr. Thompson.*) Do you find that the boys who go to Oxford take double as well as single honours?—Latterly they have not; it takes a strong boy in both to do it, and they have not courage to attempt it.

1350. (*Lord Clarendon.*) I do not know whether either of you gentlemen has anything to suggest?—No. Dr. Temple is very anxious to encourage mathematics, and is always willing to listen to any suggestions we have to make.

1351. Have you considered the system of boys in the upper parts of the school being put into a separate sort of school?—I think it is quite possible.

1352. Would you think that, in an old established school like Rugby, there was any insurmountable obstacle?—No, I do not think so. There would be difficulties of course. There would be this danger; in the first place, that idle and incapable boys would wish to enter this modern school to get off Latin composition and Greek.

1353. (*Mr. Vaughan.*) Could that be counteracted?—I should make a rigid rule that the boys in that division who would not work should leave.

1354. (*Lord Clarendon.*) Would you begin it with the highest and most eminent boys in the school?—Yes, if they showed a decided turn for mathematics, or if for some other reasons classics were of less importance to them than mathematics or modern languages.

1355. (*Lord Lyttelton to Mr. Wilson.*) Do you think so too?—I have considered the question a great deal, from seeing so very many boys here on whom a classical education produces but a very small effect, and I have observed it very much. It is a matter of opinion, of course, what amount they have gained; I think if a modern school were established here, there is so great a pressure for the army, that we should probably have nearly half in the modern school in a couple of years.

(*Mr. Mayor.*) A very large number wish to go in.

(*Mr. Wilson.*) At this moment I have 26 pupils; ten are for Woolwich, and they all will be obliged to leave Rugby, because they cannot get into Woolwich from here. If there was a second school, they could remain here.

1356. If you had a modern school, Latin being kept up, do you think boys leaving here could compete with those who, going to Woolwich some months before, have a special cramming tutor?—If there were, as they have at Marlborough, a special school given for cramming, then I think it might be done.

(*Mr. Mayor.*) The standard now required for Woolwich is altogether beyond boys of 18.

Mr. Mayor withdrew.

J. M. Wilson, Esq.

1357. (*Mr. Vaughan to Mr. Wilson.*) How long have you been the teacher of physical science at Rugby?—Since I came here, three years ago.

1358. That was soon after taking your degree?—Half a year after taking my degree.

1359. Did you come here as teacher in mathematics or in physical science?—I was appointed, in February, to come here in August. I had studied no physical science experimentally, but Dr. Temple said he supposed I could get it up sufficiently for

RUGBY.

J. M. Wilson, Esq.

13 May 1862.

the purpose; he wished me, therefore, to employ my intervening time in learning it.

1360. Then, in fact, being a mathematician, you, for the purpose of teaching it at Rugby, grafted physical science on to mathematics?—Just so.

1361. That is three years ago?—Yes.

1362. During your stay, have you devoted more time in the week to mathematical science than to physical science?—More school hours, certainly, but with private pupils at one time less, when I had many pupils in the laboratory.

1363. I do not understand, from your written evidence, whether you spend the time with them in the laboratory?—I stay in my school about four hours a day, three days in the week working with mathematical pupils; during some portion of that time the laboratory pupils are in the laboratory, which opens into my school. They are at work at the analyses which I give them; I am not with them always, but if they have any difficulty, they can ask me questions.

1364. What is the reason of that rule, that no boy in the lower school is admitted to the natural philosophy class?—I made that rule myself, simply that it should be optional for me to refuse boys, unless they are foundationers, if I find they are not well qualified for it. I break that rule whenever I see cause; for instance, a clever lad came to me last year from the lower school, but he is now in the middle school; he was only kept back by an ignorance of Greek.

1365. You are bound to admit foundationers?—I cannot refuse them; but the Head Master can.

1366. If the Head Master chooses to receive them, you must?—Yes.

1367. Do you know what is the reason that in the lower part of the middle school, which is the lowest part in which there are any natural science pupils, there are so extremely few pupils compared to the upper school?—Partly from the age at which boys generally develop a taste for natural science, which I take it, comes not before 14 or 15; they then want to know something of it. Another and less dignified reason is, perhaps, that they are not sufficiently up in German, and would then be bound to become private pupils of the modern language master, in order to qualify themselves in German. Some who are so situated say they would prefer chemistry, and, therefore, I suppose I get one or two every half-year on those grounds.

1368. I observe the same proportion goes on increasing; does that explain the greater proportion of the sixth form?—No; it continually happens that the more promising and able boys who are strong in modern languages come into the natural science class towards the twenty and sixth form.

1369. Preferring it to modern languages?—Yes; they find that the one hour a week they give to French and German is sufficient for them, and they wish to know something of physical science.

1370. Do you think the variety of mental occupation which it gives is any reason?—The boys have more active minds who wish to do it, and they wish to have some scientific knowledge.

1371. Is it your opinion that the desire you speak of as arising at about the age of 15 or 16 is a desire which seizes on the more powerful minds, or the less powerful minds?—In both; and the weaker boys are continually coming, and they say they have a taste for natural science; that is for explosions, and such things. They are the most hopeless cases I have to deal with. It is a sort of curiosity which lasts a week. It is the stronger ones, who come and say they know nothing about it, that study science to any purpose.

1372. Are your boys of higher ability do you think than the average ability of the school?—Yes.

1373. Are they of the highest ability?—Yes, some are. Those whom I consider the strongest in the school are not necessarily the strongest in classics, though there are both in the sixth form.

1374. I think the sixth form has only one set of physical science students in it?—That is all.

1375. Is it not a consequence of having only one set in it that there are some boys who have been in that set for two or three years?—Yes.

1376. And that, therefore, they are in the same set with boys who have just commenced?—Yes.

1377. How do you find it possible to give lectures which shall adapt themselves to both?—I am lecturing now on chemistry for the second time. Those who really mastered the previous course of lectures I draft off into the laboratory, and they are doing practical chemistry there while I am lecturing to the others, so that I am not incommoded with the presence of two or three boys who would know everything I have to say in such an elementary course.

1378. In fact, your general lectures are addressed rather to the beginners?—Yes.

1379. Do those laboratory pupils pay for the laboratory?—No.

1380. That is your mode of meeting the difficulty?—That is my own private mode of meeting the difficulty.

1381. What is the cause of your having only one set with that variety of attainment in the class?—Because every hour in the week is occupied, and you could not possibly find me another hour to take them in.

1382. Your own time is very much occupied?—I think it will appear from the tables that I have no unoccupied time, except on Wednesday morning.

1383. I believe you are engaged so many hours at mathematics that you would not be able to do it?—It would be quite impossible, unless I cut off mathematical work.

1384. The fact is, that having the two branches to conduct, it is impossible to devote sufficient time to it?—Yes. At the same time I do not think it a very serious disadvantage. I think the boys learn very much from one another's answers and the remarks they lead to; and almost as much from those below, as from those above them in knowledge.

1385. How long have the prizes been established in natural science?—There was a valuable one of 10*l.*, which was established before I came; but which has since been discontinued. I have established privately a prize for practical chemistry every year, with which is combined some branch of natural science.

1386. How long has that been established?—One year. The laboratory has only been established this year. Besides that, I give prizes to those who obtain 75 per cent. in their marks in my periodical examinations on the lectures.

1387. Do you find any difficulty in assigning those prizes?—The analytical prizes will generally be very easily given, to the best analyst in the laboratory.

1388. With the other prizes do you find it difficult to ascertain a gradation in the merit at all. Do you find a greater difficulty in ascertaining the gradations of merit in this subject than in others?—No.

1389. Are the prizes in these subjects obtained in part by the general ability of the boy, *i.e.*, his analytical power of mind, and not by mere feats of memory?—By both.

1390. Do you find a greater difficulty in this subject than in any other in ascertaining the degree of intellectual power?—I should be very reluctant to give a prize of great value by paper examination alone, it should be combined in all cases with practical chemistry; the 75 per cent. prizes are simply prizes to encourage work.

1391. I believe there are fellowships and scholarships in the University devoted to physical science?—Yes.

1392. Do you know where there are any?—There are some at Christ Church at Oxford, some at Magdalene, and possibly some at Caius at Cambridge.

1393. Are there enough to make it an object of encouragement to men to study the subject at school?—In a general way, certainly not; at the same time I

have now a laboratory pupil who is specially preparing for Christ Church. I think in that respect that schools are in advance of the universities.

1394. (*Lord Lyttelton.*) Is that boy the sort of boy who must depend on his own exertions in life?—He is the son of a well known London physician, with a very strong natural bent for physical science.

1395. (*Mr. Thompson.*) Would you recommend a pupil of yours with a talent for this kind of science to combine a rigorous mathematical education with it. Is the combination of faculties in the one the same or nearly the same as that which leads to excellence in the other?—I think that natural science follows mathematics; in the case of an able pupil I should strongly recommend it.

1396. There are very few capable of mathematics who would be incapable of the higher branches of chemical science?—I have had no experience in teaching the higher branches, so I cannot say.

1397. Has Rugby got many who are studying in the university laboratory at Oxford?—There are two certainly; I think more.

1398. Have you heard of any at Cambridge?—I have not. I do not know where they could study it.

1399. (*Mr. Vaughan.*) Do you think that arrangements might be made in the school, for instance, by devoting the whole time of the natural philosophy teacher to natural philosophy instead of dividing it between that and mathematics, and other arrangements made by which the study might be encouraged to a greater degree than it is now?—Of course it might be done. If there was a man who gave up all his time to teaching those things; I think there would be more demand for it then than now. There is no very great demand for it at present, because the University does not take interest enough in it. If they would give a scholarship at Trinity or St. John's for chemistry they would get students for it. It is a question of demand and supply.

1400. If there were an odd exhibition given now and then for it?—If it were only now and then, I do not think it would have much effect.

1401. Supposing there was an exhibition given at stated times, say, every year, or an exhibition given periodically, and there were also scholarships in the University: would not that have the effect of very much increasing the study of it here?—I think it would do so, but not to a very great extent. I do not think an exhibition here would seriously affect it. I do not think it would be desirable.

1402. That would be another question; but whether it would have that effect, I asked?—It certainly would.

1403. Is the study as it is prosecuted here prosecuted to the degree to which you desire to see it prosecuted?—Not in the manner in which I should wish to see it prosecuted on the whole. I do not think it can be combined to a much greater extent than at present, with a classical education. If they are all to study classics, I do not think that they can do much more in natural science.

1404. You think if the present system is to be kept up it would not be desirable to have it increased?—I think classics would probably suffer if I took them three times a week instead of twice.

1405. Is there any arrangement which you could suggest which would be desirable?—I have much doubt in speaking, for I have had so little experience. But I think the alternative between modern languages and physical science is ridiculous. Those boys who wish for a modern education wish to do both, but they cannot do both.

1406. (*Lord Lyttelton.*) They are allowed to do both?—There are four who do it. They must be in the lower sets of modern languages, because the higher sets in the upper school come in at the same time.

1407. (*Mr. Vaughan.*) They are practically incompatible?—Yes; and it is advocated by the Head Master and other masters that boys should not do both.

1408. What would you suggest?—It would be that classics should be left as free and open as possible. There are some boys who gain nothing whatever from classics, and when they have reached the fifth form they might very well drop some part of their classical work; other boys might drop modern languages; but it should be left very free if natural science is to be much studied.

1409. Do you think it would be most advisable to state that which they should drop, or, for the purpose of assisting physical science, that you should give them an option of that which they should drop?—Giving them the option, subject to their tutor. It should not be left to their decision alone. I think it is an open question whether this would be a real gain.

1410. I meant optional, as everything optional is optional at the school?—There is another method of teaching natural science. There might be periodical lectures, say once in three weeks, to all the upper part of the school; popular and good experimental lectures every three weeks; and the natural science class (in which chemistry was taught) should be purely voluntary, not an alternative at all. There would be some difficulty, at the same time, as to obtaining masters here to teach natural science, because they generally reckon on young and inexperienced men undertaking it. When there was a change, the lectureship would have to be supplied from a distance.

1411. That would involve the question of what might serve as an attraction to the teacher?—Yes, I think it would serve probably to increase the class in natural science. A good lecturer would make it attractive. They would come within the sphere of knowing something about it and would wish to know more.

1412. (*Lord Lyttelton.*) With regard to the amount of attainment which boys can reach in natural science, how far could a clever boy go into it?—The University examiners for the exhibitions last year declined to examine in chemistry: I would not examine the boys myself, and I got the second master of King Edward's grammar school of Birmingham to examine them, and he reported them as being fairly well up in the chemistry of the non-metallic elements. They ought to be able to do that. They ought to be perfect in common qualitative inorganic analysis, and to have a fair notion of the other subjects, geology, physical geography, and perhaps electricity, and so on.

1413. (*Mr. Vaughan.*) I understand you that the state of the instruction and proficiency in physical science at Rugby, at the present moment, is not what you would absolutely desire, but you do not see a prospect of altering it without a complete change?—I think it is as satisfactory as anything else in the school.

1414. As the study of the classics?—Yes; perhaps it is.

The witness withdrew.

The Rev. P. Bowden Smith and G. Vecqueray, Esq., examined.

1415. (*Lord Clarendon to Mr. Bowden Smith.*) I believe you are an assistant classical master as well as a foreign language master?—In a very slight degree. The only classical work I have is superintending the private tuition of the junior boys in my own house as house master.

1416. How long have you been at Rugby as assistant master?—Since February 1852.

1417. (*To Mr. Vecqueray.*) How long have you been here?—Since 1859.

1418. You are exclusively modern language master?—Exclusively.

1419. French and German?—Yes.

1420. (*Mr. Thompson to Mr. Bowden Smith.*) Have you always taught French and German since

RUGBY.

Rev. P. B. Smith. G. Vecqueray, Esq.

13 May 1862.

you came?—Are you referring to my own teaching, or the teaching of the school?

1421. Your own teaching?—That has been my main work ever since I came. When first I came I was not so fully occupied. I had a little stray work put upon me; for instance, once I had an extra prose copy with a few junior boys in the sixth to look to.

1422. You never took a form?—No; I have had a boarding-house since 1854.

1423. Were you at Rugby yourself?—Yes.

1424. You were on the continent, I suppose?—I was on the continent some four or five years with my family, as a boy.

1425. Both in France and Germany?—Yes.

1426. (*Lord Clarendon.*) And that is where you learnt the languages mostly?—Yes. I confess I have learnt a great deal since I have been teaching here.

1427. All forms come to you?—Yes.

1428. You teach separately, do you not?—Yes; nor can we do the whole work ourselves.

1429. (*Lord Lyttelton.*) Mr. Arnold takes a part?—Yes; and he used to take more, but since Mr. Vecqueray has been here there is less need for him and Mr. Moberly to do so.

1430. (*Lord Clarendon.*) How much time do the boys devote to modern languages in the course of the week?—Only two lessons a week; that is two hours in school. That is independent of the time for preparation, and also independent of extra work.

1431. (*Lord Lyttelton.*) For prizes?—Yes, and in the shape of private tuition.

1432. (*Lord Clarendon.*) Are you private tutor to the boys in modern languages?—Yes; with the exception that Mr. Vecqueray takes two conversation classes in French and German; being much more fluent in speaking than myself he takes those classes.

1433. (*To Mr. Vecqueray.*) Perhaps you will have the goodness to explain these conversation classes. They are recently established, are they not?—Since I came. I understand they were the chief object of my nomination as additional modern language master. These conversation classes have generally been attended by eight boys each half.

1434. (*Lord Lyttelton.*) Are they the same boys, or do they vary?—No; eight on the whole. These classes are reserved for the more proficient boys, those who are qualified for them, and to whom it is a real object to obtain a wider familiarity with French and German.

1435. How low down in the school are they?—In the upper part of the school only. I take it that these classes are reserved for boys in the sixth or in the first set of the upper school, and those who take private tuition with Mr. Bowden Smith, and who get on well with him.

1436. (*Lord Clarendon.*) So that admission into these conversation classes is a matter of privilege?—Quite so. A privilege to be obtained by high position in the school or by good extra work.

1437. (*Lord Lyttelton.*) You select them, do you not?—Partly. Any of the sixth have the right to attend them, but I may select any of the first set of the upper school.

1438. (*Lord Clarendon.*) In what manner has this conversation class been conducted?—It depends on the proficiency of the boys. This half, I have eight boys really well up in French, and we carry on these conversation classes entirely through the medium of French. We do various exercises not done in the school, as well as reading a French author without translating it, with my merely stopping them here and there to ask questions either as to an unusual word or a difficult construction; my questions and their answers always being made in French.

1439. (*Lord Clarendon.*) The whole of your communication is in French?—All in French.

1440. That is the rule?—Yes. I began by real conversation, but I found that did not answer. I tried to make them talk on different subjects, but boys under such circumstances are shy to talk.

1441. So that it is now reading books and exercises?—Yes; which is a better medium. Another plan is dictation from some modern author or a French newspaper; and again, taking a French grammar written in French for French schools, going through it with them, and doing exercises *vivâ voce*.

1442. At what time of day is it?—At half past 12 one day and at half past 2 the other day.

1443. How often?—Twice a week.

1444. How long does the class go on?—For an hour.

1445. That is over and above the regular lesson?—Yes.

1446. (*To Mr. Bowden Smith.*) How are the boys able to get this time?—From the games. This extra work has to do battle with the games. There is ample time for the extra work, only it has to be taken from the games.

(*Mr. Vecqueray.*) That explains the small number. If they were taken from other subjects the number eight would be soon increased to eight times eight; but being taken from the play time, it is very difficult to get them to come.

1447. (*Lord Lyttelton to Mr. Vecqueray.*) Do you make it a chief object in these conversation classes to attend to their pronunciation?—Yes, of course.

1448. (*Mr. Thompson.*) Can you give us any idea, by example, of the amount of proficiency of the boys, the pupils that you have. What can they do now in German?—In German they are not so well up as in French, on the whole.

1449. Can they construct correct German sentences?—Yes, some of the better scholars can, certainly.

1450. If you placed before them a historical book, say, Lord Stanhope's Life of Pitt, would they be able to turn it into reasonably good German?—I think not.

1451. If you were to give them a comedy, an easy comedy full of polite conversation, would they have any idea of that?—Many would do that, but not those who have been exclusively educated at Rugby school. It is exceptional.

1452. Would they be able to do that in French?—I should say so.

1453. They obtain a greater proficiency in French than in German?—Certainly.

1454. You think it easier for them to learn French well than German?—Yes, I suppose it is.

1455. Would many of those who leave you be able on going abroad to speak French fluently?—There is the difficulty; I am afraid not; not many.

1456. One half of those who leave the school?—I think not.

1457. Do you think your conversation classes would enable them to do that?—I think they would; it makes all the difference.

1458. They would hold their own in French society?—I think they would be able to get on.

1459. If they had anything to say?—Yes.

1460. (*Lord Lyttelton.*) Can you get the pronunciation pretty good before they leave?—I think so; pretty good.

1461. Is any fair proportion of them tolerably grounded in French before they come here?—That varies very much.

1462. (*Lord Clarendon.*) Is it not rare to find a boy well grounded?—Yes, unless there is some particular circumstance to account for it, living abroad, foreign connections, &c.

1463. Or having had some foreigners in his family?—Just so.

1464. (*Lord Lyttelton.*) What is the size of your French class?—In the upper school I should say from 22 to 25.

1465. (*Lord Clarendon.*) French and German or French alone?—They are mixed together.

1466. (*Lord Lyttelton.*) Do you find them perfectly manageable?—Quite.

1467. No difficulty about discipline?—Not the slightest.

1468. (*Lord Clarendon.*) Do you hear the French and German contemporaneously?—No, they begin with French exclusively in the lower school, and again in the lower middle, and in the upper middle even they begin exclusively in French, then the upper sets of each part take up German. The upper middle is divided into five different sets. German is properly begun only in the third set; very little in the fourth set.

1469. Do you consider that you can give those who have been a certain time with you sufficient time and attention to be able to send them away well grounded in French at least?—Sufficiently well grounded for what?

1470. Well grounded in grammar and knowledge of the language, independent of speaking it?—Yes; I think so.

1471. (*Lord Lyttelton.*) Able to read French with pleasure and enjoyment to themselves?—I cannot say I have noticed that; I have had opportunities, but I cannot say that a boy has acquired that amount of knowledge as to take up at his pleasure a French paper that might fall into his hands.

1472. (*Mr. Thompson.*) Sometimes it is so, I suppose?—I have not noticed it.

1473. (*Lord Lyttelton.*) But for any purpose of necessity he could do so if he had a mind?—Yes.

(*Mr. Bowden Smith.*) Some of the boys of the sixth form, if they had a historical subject for their lesson, and had the choice of a French author, would prefer it; De Tocqueville, for instance.

1474. And they would have sufficient facility to enable them to do it?—Yes.

1475. (*Lord Clarendon to Mr. Vecqueray.*) You consider that they go with a tolerably good accent?—I think so, on the whole.

1476. Probably those who come with a knowledge of French come with a bad accent?—Yes.

(*Mr. Bowden Smith.*) The majority have been ill-prepared; the last few years I have noticed that the majority are worse prepared.

1477. (*Lord Lyttelton to Mr. Vecqueray.*) In boys who come here not much younger than 10 it would be of great importance to have them well-grounded in pronunciation and accent before that age?—Yes; it would be a great acquisition.

1478. (*Lord Clarendon.*) Do you not find it extremely difficult, if a boy comes here with a bad accent, to improve his accent?—Yes; I find that the system of taking places at school is an immense help. When a boy begins reading a passage his neighbour is intent on catching the first word or syllable mispronounced, and he will immediately jump at it and gain a place thereby; that makes a boy very sharp on the look-out.

1479. (*Mr. Thompson.*) You never pass a word down and find that none of them can pronounce it?—No, except perhaps some proper name.

(*Mr. Bowden Smith.*) Not often.

1480. (*Lord Clarendon to Mr. Bowden Smith.*) Is the study of modern languages preferred by the boys to physical science?—It is not altogether so much the choice of the boys as the choice of the parents; you must also remember then that modern languages are included in the school system of payment, while natural philosophy is an extra payment.

1481. Do you not find that the parents are anxious about their children acquiring modern languages?—Some are; but the majority begrudge the time taken from the classics.

1482. Is there anything that either you or Mr. Vecqueray would suggest to us by which the study of modern languages could be promoted, because I, for one, think they are very important?—The only suggestion I have to make, and I do not see myself the way of carrying it out, is to have an extra hour a week.

(*Mr. Vecqueray.*) I second that suggestion very strongly.

1483. (*Lord Lyttelton.*) There is a very fair amount of prizes?—(*Mr. Bowden Smith.*) Yes; I think there are enough to stimulate the study.

(*Mr. Vecqueray.*) More would be a harm, I think.

(*Mr. Bowden Smith.*) There are prizes which I do not think appear in the report.

1484. (*Lord Lyttelton.*) They are alluded to?—There are prizes given now for proficiency in grammar both in German and in French. It is quite a late institution.

1485. (*Mr. Thompson to Mr. Vecqueray.*) You do not affect to teach German philologically, *i.e.*, with reference to its cognate languages?—No; it would hardly do, because there is not one set exclusively composed of proficient boys in German. There are a few very proficient, but the majority are very inferior.

1486. I suppose the efficient boys would be able to point out the analogies between German and English, for instance?—Yes.

(*Mr. Bowden Smith.*) Or between French and Latin.

1487. (*Lord Lyttelton to Mr. Vecqueray.*) Is it commonly the case that a boy clever at one would learn the other easily?—I do not think it would follow. It may, perhaps, be one difficult point to manage. Boys very proficient in one language are often backward and slow in the other language.

1488. From a knowledge of German it does not follow that he would have a knowledge of French?—No. There are exceptional cases of boys who have been brought over from Germany.

1489. (*Lord Clarendon.*) I think you say there is a great difference in boys as to the facility or difficulty of their acquiring languages. Any person who possessed the facility of acquiring language would find that they could learn one thing the same as the other?—No doubt.

(*Mr. Bowden Smith.*) I should say as a rule they progressed very equally.

(*Mr. Vecqueray.*) There are boys proficient in one and not in the other.

1490. (*Mr. Thompson to Mr. Vecqueray.*) Do you know anything of the success with which English and French is taught in the Prussian or Belgian schools?—I should say not so generally nor so successfully as French and German here.

1491. Do you think they get on so well with their English as our boys do with their German?—I think not.

1492. Do you not think they get on better, that they know more English generally in the public schools of Germany?—No, I think not; I should say not.

1493. (*Lord Clarendon.*) I think in all the gymnasiums and schools they always teach French and English; I have some knowledge of the different schools in the Duchy of Nassau and throughout Prussia, and they always attach great importance to those two languages, French and English?—Yes, in the prospectus; but I understood the question to be, "Do you find the average of boys in France and "Prussia more proficient in English than boys in "England (than Rugby boys for instance) would be "in French or German"? In answer to that, I should say no.

1494. (*To Mr. Bowden Smith.*) The same marks I see are given for modern languages as for classics, that certainly must be an encouragement?—The same proportion according to the time given.

1495. That has acted as an encouragement, I suppose?—Yes, very much; sometimes it makes a difference of place.

1496. That is a formal and official recognition of the study of modern languages, which must have promoted them?—Yes.

1497. (*Mr. Thompson.*) Do the examiners from the universities profess to examine in French and German?—They set a paper which counts very slightly in the result.

1498. Who looks it over?—I can say nothing as

RUGBY.

Rev. P. B. Smith. G. Vecqueray, Esq.

13 May 1862.

to who looks it over, or how much account is made of it, but it is just recognized formally.

(*Mr. Vecqueray.*) I think the boys do not attach any importance to it.

1499. (*Mr. Thompson to Mr. Vecqueray.*) What other examinations are there besides the University examination in modern languages?—There is the quarterly examination in Grammar; then there is the half-yearly examination for the regular work, and the annual voluntary examination for the French and German prizes.

1500. Conducted by whom?—By Mr. Bowden Smith and myself.

(*Mr. Bowden Smith.*) And generally a third classical master; for instance, Mr. Arnold.

1501. (*Lord Lyttelton to Mr. Vecqueray.*) I understand that, in the conversation classes you allow no English to be spoken?—No English. As a general rule, French is spoken; we do not often have boys qualified for a German conversational class; this half year we have only one, and he an accidental one.

Victoria Street, Tuesday, 16th December 1862.

PRESENT:

Earl of Clarendon.	Hon. Edward Twisleton.
Earl of Devon.	Rev. W. H. Thompson.
Lord Lyttelton.	H. Halford Vaughan, Esq.

The EARL OF CLARENDON in the Chair.

H. L. Warner, Esq.

16 Dec. 1862.

Henry Lee Warner, Esq., called in and examined.

1502. (*Lord Clarendon.*) How long were you at Rugby?—I was there six years; I went there in 1854 and left in 1860.

1503. Since 1860 you have been at St. John's College, Cambridge?—Yes.

1504. There are a certain number of residents, are there not, whose boys are at the school?—Yes.

1505. Residents in the town and in the immediate neighbourhood?—Yes, within five miles.

1506. Are there a large number of those at the school?—There are a good many; I do not know what the exact proportion would be; I should think there are about 90.

1507. As many as 90?—I should think so, but I will not be certain.

1508. Are they upon a footing of perfect equality with the other boys?—Yes; except those that are in the lowest forms. There are a great many among the number who never get above the lower forms; they never rise to any eminence; but as soon as they get into the middle or upper school there is perfect equality.

1509. Socially speaking?—Yes.

1510. Some of them are sons of tradesmen in the town?—Yes.

1511. And no difference is made whatever towards them?—No, certainly not; only of course very few of the tradesmen's sons ever do rise; they come knowing no Latin or Greek, and they are taken away very soon, or else remain in the lowest forms.

1512. Would you tell us what are the duties and the powers of the monitors at Rugby?—If they are in the house, they have to call over at dinner, and at locking up, and at prayers; and they have to see that the fellows are in bed at a quarter after 10, and to keep silence for about five minutes between 10 and a quarter past 10 while each bedroom has private prayers; and then they have to say public prayers at half-past 9 if the master of the house does not come down.

1513. That is in chapel?—No, in the hall; and besides that, they have to see that there is not any excessive noise, or anything of that kind.

1514. That is in the house?—Yes. Out of the house they have to prevent fellows smoking, or any bullying, or anything of that kind, and generally to look after the fellows.

1515. They would consider themselves called upon to interfere if they saw anything going on that was very wrong, such as going into a public-house?—They would at once interfere, and either send the boy up, or they have the power of licking him if they prefer it, only that of course is subject to appeal.

1516. Their power extends beyond the mere school?—Yes.

1517. What are the punishments which they have power to inflict?—Setting lines to be written out, or to be learnt by heart, and licking.

1518. What is the punishment they generally prefer?—Licking would be very seldom resorted to indeed.

1519. Licking with the fists would it be?—No; with the cane; they may not lick with the fists.

1520. (*Lord Lyttelton.*) They are allowed canes on purpose?—Yes.

1521. But caning is reckoned the more serious punishment of the two?—Yes; it is a very serious punishment indeed.

1522. (*Lord Clarendon.*) Is it generally inflicted on the spur of the moment, or is the boy brought up the next day?—If they are keeping order in school calling over, they are obliged to do it on the spur of the moment, but there is a master present. On other occasions they would either have him to their study, or before the sixth of the house, or before the sixth of the school if it is a very public offence, or even in some cases before the whole house.

1523. That would be a grave case?—That would be a very grave case indeed, where all the house was interested in seeing the punishment; as, for instance, in an aggravated case of bullying.

1524. Was there much bullying during your time at Rugby?—Very little indeed.

1525. (*Lord Lyttelton.*) By bullying, do you mean personal violence?—There was so very little of that.

1526. That would be considered aggravated bullying?—Yes, certainly.

1527. (*Mr. Vaughan.*) You were speaking of præpostors keeping order, do they keep silence at dinner time now?—No; they are always allowed to talk during dinner, and even in the bedrooms when they were all in bed.

1528. (*Lord Clarendon.*) Do you think the monitorial system as established at Rugby works satisfactorily?—Yes.

1529. And has the support of public opinion?—Yes; and very few fags object to it.

1530. (*Mr. Vaughan.*) Is it a common practice of the masters not to be at prayers in the house?—No, it is not by any means a common practice, but they are sometimes absent; for instance, if they are away; Dr. Temple was often away.

1531. Were the canes that were carried by the præpostors carried at all times, or only by the official præpostor of the week?—They could have them whenever they liked; if they go out for a walk.

1532. Is that the usage?—I think it was usually confined to Sunday walks.

1533. (*Lord Lyttelton.*) No others are allowed to have the canes?—No.

1534. (*Lord Clarendon.*) Is it a thick cane?—It

is no particular cane; you may have a walking-stick if you like.

1535. (*Lord Devon.*) Is it not submitted to the masters?—No; but of course you would not use a walking stick on a fellow.

1536. (*Mr. Vaughan.*) Referring to your experience when you were an under boy and before you were in the sixth, did you ever see boys who habitually abused their powers as præpostors?—No, I do not think I know of any cases of habitually doing it, because we should at once have an appeal to a sixth levy on it.

1537. I am speaking of the time when you were a lower boy yourself?—I do not think I do.

1538. (*Sir S. Northcote.*) With regard to keeping order in the house; suppose there was any card playing going on in the studies, would the sixth take notice of it?—Certainly.

1539. Did they ever go into boys' rooms to see if there was any mischief going on?—They would not go into their studies on purpose; but if they came upon it by accident they would notice it. If they knocked, the fellows would probably lock the door.

1540. Was it considered legal to lock your door?—It was considered legal.

1541. So that any mischief might be carried on, which really could not be prevented in that way?—Except by the influence of the sixth fellows generally.

1542. (*Lord Devon.*) Supposing the monitor who filled also the position of head of the house to be a small boy, and a case of bullying to exist in the house in which a larger and backward boy in a lower form had bullied a small boy in the same form, would the authority of the small boy be paramount over the larger boy below him?—Certainly.

1543. Would the bigger one think of resisting the smaller one if he attempted to cane him?—No.

1544. And if such an improbable event did occur, the small captain would appeal to another sixth?—Yes, or show him up to the Head Master.

1545. You do not think of an express instance?—I do not remember one.

1546. I ask, of course, merely the general question; but supposing the case which is conceivable, of any offence which would be visited, as regards a boy on the form below the sixth, by any punishment to be administered by the sixth, to be committed by a sixth form boy himself, what would happen?—There would be a sixth levy called by some fellow in the sixth, and they would probably decide to ask the Head Master either to send him away, or to put him down a certain number of places.

1547. Would that be within his form, or would it imply degradation to the next form?—I am not sure that I remember any case of his being put out of the sixth.

1548. (*Mr. Vaughan.*) Was it a remedy that a little boy would easily and naturally resort to, the application to a sixth form boy, in case of being bullied?—I do not think he would like to do it; I do not think he would like to peach; probably his friends would tell for him.

1549. Do you think that most of the cases that occur get to the knowledge of the sixth form?—I think they do; I do not remember any out of the sixth that did not, sooner or later, get to their knowledge.

1550. (*Lord Devon.*) Did you enter in a lower form yourself?—Yes; I was a fag for half a year.

1551. Then, looking to your experience in both portions of the school, do you think that the system of influence and power that is administered by the sixth form is on the whole beneficial to the school?—I think so, decidedly.

1552. (*Lord Lyttelton.*) Do you think it has a good effect upon the minds of the boys themselves who exercise that power?—I think it has on the majority; there are some who are not very good characters really at heart, and they put on an appearance rather the other way.

1553. Do you think, in their future life, it has a good effect on their character?—I should think so; the only danger is, that they might be rather priggish on first going up to the universities.

1554. It gives them a sense of discipline, good order, and responsibility?—Yes.

1555. (*Lord Clarendon.*) Does it make them tyrannical?—No, I do not think it does generally, because the tone of the school would be very much against that.

1556. (*Sir S. Northcote.*) It is not the habit of the masters to go round the house at night, is it?—In our house the masters very seldom did, except late at night to see that there was no chance of a fire, or anything of that kind.

1557. Do you think it would be a better system if, instead of trusting the discipline to the sixth, the masters had themselves occasionally gone to the boys' rooms?—No; I think that would engender mistrust between the masters and the boys, and the sixth would not think it their business so much if the masters took it into their hands.

1558. You think it better to be entrusted to the sixth than for the masters themselves to do it?—Yes; of course I can only speak for our own house.

1559. (*Mr. Vaughan.*) They no longer shirk the præpostors when they are walking in the country, do they?—No.

1560. (*Mr. Thompson.*) Nor the masters?—No.

1561. Is that entirely done away with?—Yes.

1562. (*Lord Devon.*) You mentioned instances in which a jury of the sixth would be called together; would it be competent for a sixth form boy to inflict punishment by caning in his own room, without anybody being present?—I do not think he would have room in his study.

1563. Supposing there was not that physical impediment, would it be consistent with the usages of the school and public opinion, that he should do so?—Yes, it would.

1564. Where the studies were large enough to admit of that, have you known instances in which they have inflicted punishments by themselves?—I think they have in one house; but I am not certain. They could not in ours.

1565. (*Mr. Thompson.*) Do you recollect any flagrant instance of the abuse of the monitorial power, during the time you were at Rugby?—I should think the worst would be for letting a fellow go by out of bounds, or anything of that sort.

1566. That is hardly an abuse of his power; it is rather a neglect to use it?—Well, he might give him leave when he had no right to.

1567. I am not speaking of that, but of over strictness rather than of over laxity; do you think the monitorial power was habitually or frequently abused?—No.

1568. Not habitually or frequently, but it was occasionally, perhaps?—I do not at this moment recollect an instance, but I should think probably it might.

1569. Supposing one of this body of monitors exceeded his powers, would he be supported by the others?—No; certainly not.

1570. There would be an appeal to the whole body of monitors?—Yes.

1571. That would be the constitutional remedy for the excessive exercise of power?—Yes, unless they like to go to the Head Master at once; but I have never known a case in which there has been an appeal to the Head Master, which has reversed the decision of the sixth.

1572. (*Lord Lyttelton.*) Do you think the body of the lower boys look to the monitorial system as a great protection against bullying?—I think they do when they think about it; but there is so little bullying that they do not think much about it.

1573. (*Lord Clarendon.*) Was there much drinking

RUGBY.

H. L. Warner, Esq.

16 Dec. 1862.

at Rugby, when you were there?—Very little indeed.

1574. Would the public opinion of the school be against that?—Well, it varies so very much. When I first went there, I should have said that public opinion would not be actually against it; it was not for it in the least, but it was not against it. I should think when I left it was rather against it.

1575. (*Lord Lyttelton.*) You mean against the practice of drinking?—Yes.

1576. There would always be a feeling against drunkenness?—Well, they think it is a silly thing to go in simply for the sake of the bravado, because it could not be from any want.

1577. Do they go to public houses to drink?—Very little, indeed.

1578. That you think was rather discountenanced?—Yes.

1579. (*Mr. Thompson.*) Would a monitor stop that?—Yes.

1580. (*Sir S. Northcote.*) After a game of football or cricket, did you not get beer?—Yes, we generally went into the school-house.

1581. (*Lord Clarendon.*) They are allowed beer there?—Yes, after football those who played the biggest matches; of course all the small fellows are not allowed, unless they happen to want it very much, when a sixth fellow may take them.

1582. (*Lord Lyttelton.*) You have known cases of drunkenness occur sometimes?—Yes, chiefly on a day which was set apart for a whole holiday, when they went away for two nights.

1583. (*Mr. Vaughan.*) Do you mean that that took place away from school?—We had leave to go, and we used to go to Warwick or Kenilworth.

1584 Without going to any relation or any grave person could you be absent for the day?—Yes, you might go for the night if you stayed at any friend's house in the neighbourhood, otherwise only for the day.

1585. (*Lord Clarendon.*) You had to make known where you were going if you stayed out all night?—Yes, you had to get the leave of your parents. That has been done away with now; the whole school cannot go on the same day, they have to get leave from Thursday to Saturday, or from Saturday to Monday.

1586. (*Lord Lyttelton.*) Did you go and sleep at Leamington?—No, that was out of bounds, and so is Portobello, a place between Warwick and Leamington, where there was a rather large public-house.

1587. I thought sometimes on those two days they went to Warwick or Leamington?—I said Kenilworth.

1588. Would they sleep for a night at Kenilworth?—No, they might not do that.

1589. Then how could they sleep out?—If they went to a friend's.

1590. (*Lord Clarendon.*) Was there any gambling or any immorality of any kind at Rugby?—In my second half some fellows were discovered playing cards; I suppose there was some kind of gambling, but I do not know what were the cases; I never discovered any while I was in the sixth.

1591. (*Sir S. Northcote.*) You say discovered; do you mean discovered by the sixth or by the masters?—By the sixth.

1592. (*Mr. Thompson.*) Do you mean that cards would not be allowed at all, not even in moderation?—No, not at all.

1593. (*Lord Clarendon.*) The sixth form would consider themselves bound to interfere in the case of any gross immorality?—Certainly.

1594. Was the tone of the school high—was there a strong feeling against lying, for instance?—Very strong indeed.

1595. You consider that the tone of the school was gentlemanlike and honourable?—Certainly; I think the only thing which might be rectified was the cribbing, or anything of that kind, taking things in composition which were not your own.

1596. (*Sir S. Northcote.*) With regard to lying—was lying to the masters thought wrong?—Yes, very wrong.

1597. Lying of any kind?—Yes.

1598. (*Lord Devon.*) Take another offence which is not a moral offence, take smoking, would the sixth form interfere to support any prohibition by the masters with regard to smoking?—The sixth always punished for smoking.

1599. And never smoked themselves?—I suppose some of them did; of course if they were discovered smoking by a sixth fellow, he would call a sixth levy.

1600. (*Mr. Thompson.*) They would be obliged to leave the sixth in that event?—They probably would.

1601. It would be thought a graver offence for a sixth-form boy to smoke than for another boy to do so?—Yes; I do not think that the school generally did think that smoking was an offence; they would think it very silly, and that was about all.

1602. (*Sir S. Northcote.*) Were there particular boys who would have an influence in the school in that way; a certain set, who, if they took to smoking, or any particular thing, would make it fashionable?—Yes; I should think they might.

1603. Boys who were distinguished in games, or otherwise, and who had an influence?—Yes; but I should think the majority of those were in the sixth generally.

1604. Even of those who were distinguished in games, and so forth?—Yes; I should think the majority were.

1605. (*Lord Clarendon.*) It is not the practice to have single rooms for the boys?—No.

1606. They were almost all dormitories?—Yes.

1607. (*Lord Lyttelton.*) Is there any case of single rooms?—There are two beds in one room.

1608. (*Mr. Vaughan.*) Are you speaking of the school-house?—Yes.

1609. There is only one room with two beds?—I am not sure whether they use the other; there was another.

1610. (*Lord Devon.*) What was the largest number in Dr. Temple's house?—Fourteen.

1611. How many were there at the other houses?—I should think there were 12.

1612. (*Lord Clarendon.*) What boys had the power of fagging?—Only the sixth.

1613. How many boys are in the sixth?—I think about 40, generally.

1614. The whole of those are able to fag?—Yes.

1615. Do you think that power is often abused?—No, I do not think so; I think the worst case would be where they fagged small fellows. They might favour any fellow they liked, and not fag him so much as the others.

1616. What were the duties that fags were generally called upon to perform?—Sometimes he had to go and fetch hot water in the morning, when you got up; that was very seldom; then he made the toast for breakfast and tea. In our house there is an institution called night fagging, at which he had to be on for a week between 8 and half-past 8; there were two every day, so as to answer any call while we were at supper.

1617. Was he often required?—Yes, they were called frequently; because in our house we always had the fifth up to supper with us, and while they were with us they were allowed to call for that half-hour.

1618. I suppose it was merely to go and fetch things?—Merely to fetch beer or bread, or anything of that sort.

1619. (*Sir S. Northcote.*) Was there not a system called "study fagging"?—Yes; each sixth fellow in a house could choose a fag if he liked, to be his study fag instead of the night fag.

1620. What had the study fag to do?—He had to shut up the books and put them on the shelves again, and things of that kind.

1621. He had not to dust the room?—Yes, he had.

1622. (*Mr. Vaughan.*) Was it customary for one

master to have three or four fags of that description, who took it in turns week by week?—It was not in our house, because each sixth fellow had only one.

1623. Were you in the school-house?—Yes, I was.

1624. How was it that each boy had so few as one in that large house?—Because we did not divide them off into study fags; the rest could be fagged at any moment; a sixth fellow would open his door and call "fag," and whatever fag heard first had to come.

1625. Was there a great desire to be first to hear it under such circumstances?—No, not generally.

1626. (*Mr. Thompson.*) Do you recollect what your own feelings were when you were in that capacity; was it very hard work?—No; I rather liked it, because it gave me an opportunity of talking to the swells of the school.

1627. (*Lord Clarendon.*) Do you think it is productive of kindly relations between the fag and his master?—I think it is in most cases.

1628. And a master would consider himself bound to protect his fag?—Yes; your study fag you would always look after, and generally have him in to see how he does his lessons.

1629. (*Mr. Vaughan.*) Did you ever know an instance of spiteful fagging; of a boy who had the privilege, marking a particular boy he did not like, and worrying him with the fagging?—I do not think I have known a real case; of course there have been cases where it has been thought to be so, but I have never known any case which I have actually thought to be so myself.

1630. Have the fags anything to do with keeping the cricket ground in order, or anything of that sort?—No, not the least.

1631. (*Lord Devon.*) As to attendance at games, were the junior boys obliged to attend either cricket or football?—They were always obliged to attend football; it was compulsory, unless they had a note from the medical man signed by the head of the house, and the master of the house.

1632. And that exempted them?—Yes.

1633. Now, as regards cricket, were junior boys liable to be fagged out?—Yes, but that is almost done away with now.

1634. (*Sir S. Northcote.*) What is the system of island fagging?—That is entirely gone, I think it went away a long time ago.

1635. You were not there at the time?—No.

1636. (*Mr. Thompson.*) Football and cricket are the only games that are much practised at Rugby; you have no boats there?—No, we have rackets.

1637. In the cricket season, which begins in May, how many hours a day do you think would be devoted to cricket?—It would depend so very much what elevens there were. If there was a fellow in the eleven of the school, or in the twenty-two, he might go and play at 3, and go on till about 6.

1638. Do you think the boys would be obliged to play 20 hours in the week?—I should not say as much as 20.

1639. Not so much as five hours a day at cricket, one day with the other?—No.

1640. That would seem excessive?—Yes.

1641. (*Sir S. Northcote.*) Practically, how many hours would a boy who was in the eleven be likely to play?—There would be three big sides a week, probably three hours, that would make nine hours, then he could have about two hours the other days; I should think it might amount to fifteen hours.

1642. (*Lord Clarendon.*) Were you generally satisfied both with the quantity and quality of the meals while you were there?—Yes, latterly perfectly. I do not think when I first went there it was such as it ought to have been.

1643. Was it deficient in quantity and quality?—No, not in quantity, in quality it was.

1644. Was it ill cooked?—I do not think they looked after it as they ought, when I first went; Dr. Temple reformed that.

1645. Is there nothing to be complained of?—Nothing at all, I think.

1646. (*Sir S. Northcote.*) How is the beer?—It was very good indeed when I left.

1647. (*Mr. Vaughan.*) Have you stated what the meals consisted of?—We had bread and butter and tea for breakfast, or we could have coffee, if we liked. For dinner we had meat, and every other day pudding.

1648. Only every other day?—Only every other day. Then we had tea the same as breakfast, and for supper in the evening, bread, cheese, and beer.

1649. That was all?—That was all.

1650. You never had meat twice a day?—No, unless sometimes when we had been out having a very long run, or anything of that kind, then they used to send some in.

1651. (*Lord Devon.*) In the afternoon was that?—Yes, for tea.

1652. (*Sir S. Northcote.*) Did the boys ever get any meat for breakfast from out of the house?—Yes, frequently.

1653. And that was allowed?—Yes.

1654. (*Lord Clarendon.*) Will you have the goodness to tell us how the Sunday was passed?—It would depend upon whether we had morning chapel. During the summer we had morning chapel at 8, consisting of the Litany, after that we had breakfast, and then at a quarter past 10 there was what was called lecture, which consisted of saying something by heart, and then being heard some chapters of the Bible; it was a lecture in the higher forms. Dr. Temple usually gave a lecture upon some part of the Old Testament History, which lasted an hour.

1655. You say "being heard some chapters in the Bible"?—In the lower forms they were asked questions, because they would not attend to the lecture unless they were asked questions.

1656. It was known beforehand what those chapters would be, on which lectures would be given?—Yes, always.

1657. And then the school was prepared to answer those questions?—Yes.

1658. Then, afterwards?—At half-past 11 we had the rest of the morning service.

1659. The whole of the school attending both times?—Yes. Then at 1 we had dinner, after that we generally went out for a long walk till 4, or half-past 4, when we had chapel again, and then we generally went out for a walk again, or stayed about in the close.

1660. (*Lord Lyttelton.*) You had your time to yourself?—Yes, till locking up.

1661. (*Lord Clarendon.*) There was no school, nothing but Dr. Temple's morning lecture and chapters in the Bible?—That was all. Dr. Temple did not lecture to the whole school; each master lectured to his own form.

1662. During that same time was there a similar lecture or form of religious instruction going on in the house?—Do you mean during the time which we had to ourselves?

1663. No; I mean in the morning, about the same time that Dr. Temple was giving his lecture?—Dr. Temple would only lecture to his form.

1664. But in the other forms?—Yes; each master would be lecturing his own form from a quarter past 10 till a quarter after 11.

1665. (*Lord Lyttelton.*) All the school would be under some religious instruction during that time?—Yes.

1666. (*Lord Clarendon.*) What other form of religious instruction was given; was the Greek Testament done?—That was done on Monday morning; we had generally Greek Testament then.

1667. (*Lord Lyttelton.*) Did you prepare for that on the Sunday?—Sunday evening.

1668. (*Lord Clarendon.*) How much of the Greek Testament was taken on Monday morning?—Some masters made it much longer; they took a few verses at a time; and others would go through it so very quickly. It was simply a matter of learning the Greek.

RUGBY.

H. L. Warner, Esq.

16 Dec. 1862.

1669. Dr. Temple heard his class in the Greek Testament?—Yes, he always heard them very carefully. We said Greek Testament on Thursday morning, too, in his form.

1670. Did he expound the part that was done?—Yes, he always did so.

1671. He asked questions upon it?—Yes.

1672. More with reference to the subject than to the Greek?—Certainly.

1673. (*Mr. Thompson.*) How many sermons had you on Sunday?—One in the afternoon.

1674. (*Lord Lyttelton.*) Did Dr. Temple always preach?—Whenever he was there.

1675. (*Mr. Thompson.*) Are his sermons popular?—Yes, among the higher forms.

1676. (*Lord Lyttelton.*) It is in his discretion whether he preaches or anybody else?—Yes, he is chaplain.

1677. And in case he cannot preach does he appoint a deputy?—I think they take it by turns then; they always seemed to keep order, but I am not sure.

1678. (*Lord Clarendon.*) When he is there he does not give up the pulpit to any other master?—Never, except on special occasions.

1679. (*Lord Devon.*) Is the choral service liked?—Yes, very much, but we do not have it very much a choral service.

1680. But such parts as are performed chorally are appreciated?—Yes.

1681. (*Lord Lyttelton.*) Boys used to join in it themselves, did they?—As many as could.

1682. If the boys were inclined to read, would they take a Sunday for private reading?—I do not think so.

1683. Is it a day on which they write letters home?—Yes.

1684. (*Lord Clarendon.*) Great pains were taken by Dr. Temple in preparing boys for confirmation?—Great pains indeed.

1685. When did the preparation commence; how long before confirmation?—I could not say for certain.

1686. A considerable time?—Yes, certainly. I do not think I could say exactly the time.

1687. I suppose as soon as Dr. Temple knew who were the boys that were to be confirmed, he would begin pretty early in that half to prepare them?—Yes.

1688. What was his form of preparation?—He had his own house up of an evening; about three or four of them every evening; and then he had the whole school, all those in the school who were going to be confirmed, once a week in chapel, and lectured to them.

1689. Was his lecture followed by questions?—I do not think he asked questions except privately.

1690. He ascertained that the boys were in a proper state privately?—Yes.

1691. (*Lord Lyttelton.*) Did he preach on the subject in the chapel?—Not publicly, only to the fellows who were going to be confirmed, all collected together.

1692. (*Lord Clarendon.*) Do you think there is a proper feeling with respect to confirmation generally among the boys?—Yes, certainly.

1693. That they recognize its importance?—Yes. What I judge by is, that one frequently would hear fellows saying, So-and-so is doing things which one would not expect from a fellow who is going to be confirmed.

1694. And immediately after the confirmation do they take the sacrament?—The very next Sunday.

1695. That I suppose never fails among those who have just been confirmed?—They all go.

1696. There is no compulsion?—No.

1697. Would the habitual absence from the communion table of those who had been confirmed be observed upon by Dr. Temple?—It would be observed upon, and it might be observed by a tutor if he knew the fellow very well, but he would not notice it to a fellow he did not know well.

1698. So that attendance depends on the boy's feelings?—It is optional.

1699. (*Lord Lyttelton.*) He would not let it bear on his conduct towards the boy, or his position in the school?—No.

1700. (*Mr. Thompson.*) What would be the number of boys at any given celebration of the communion?—It would depend so very much upon whether there had been a recent confirmation or not.

1701. It would be more numerous immediately after confirmation?—Yes; and at the end of a half or at the beginning of a half.

1702. What would be the maximum number; do you think it would be 100?—I should think quite that.

1703. (*Lord Devon.*) With regard to private prayer, has it occurred to you to observe that the system of having large dormitories or rooms in which more than two or three boys slept together, would interfere with the practice of saying private prayer on the part of the smaller, more timid or more shy boys?—I should think not. It would rather make them do it the more, because a fellow would not like to be noticed not to say his prayers.

1704. The head of the room there would require silence for a certain time?—He always did in our house.

1705. Even supposing such a room as 14 boys?—Yes; in fact more so, because it would be the more required.

1706. Practically, have you formed any opinion as to the advantage of having a good number of boys in the room, or having only in one or two as in some schools?—I think having a good many is preferable.

1707. Even for boys of the age of the sixth form?—Yes, I think so.

1708. On what ground?—You can then always have one sixth fellow in each dormitory in a house.

1709. You think order is better preserved by having the rooms so arranged that you could have a senior boy in each?—I think so, certainly.

1710. Is it so comfortable for the senior boy?—No.

1711. Has he the opportunities of reading privately which he would otherwise have?—He would only have to see that they are all in their rooms; then he would have to keep silence for about five minutes; then he would wait about a quarter of an hour to see them all in bed, and then go down again.

1712. (*Mr. Thompson.*) How late would he sit up?—If he got special leave he could sit up till 12.

1713. (*Mr. Vaughan.*) When is he expected to be up in the morning?—He has to be down in big school at 7, and he usually gets up about half past 6.

1714. Would not that be rather a short allowance for a growing boy, we will say from half past 12 to 6?—Very few fellows do sit up. They generally go to bed about half past 10, and it would be only the sixth who could sit up.

1715. (*Sir S. Northcote.*) Without special leave how late could they sit up?—Till half past 10.

1716. (*Mr. Thompson.*) Do the boys ever get up very early in the morning for the purpose of reading?—They did in the summer half frequently.

1717. Instead of working at night?—Yes; because they could not get leave.

1718. They might get up in the morning?—Yes.

1719. (*Mr. Vaughan.*) Would it be a consequence of a sixth form boy not going to bed at the same time that the room would be without a ruler?—I think when once they got into bed they did not want to get out again.

1720. Sleep governs then?—Not actually sleep, but they begin to talk.

1721. (*Lord Devon.*) How late are they allowed to talk?—As long as they like.

1722. Till the sixth form wants to go to sleep?—No; as long as they like.

1723. (*Mr. Vaughan.*) You think there was no

bed-room bullying at all?—I do not think there was.

1724. (*A Commissioner.*) No turning of beds?—No, I do not think so. There was sometimes a little disorder if the sixth fellow was late.

1725. Nothing serious?—Nothing serious.

1726. (*Lord Clarendon.*) How much private tuition was there at Rugby?—We used to have to go in for about an hour every other day, besides having one copy looked over every week by the private tutor, and you could always refer to him when you wanted to.

1727. Did every boy have a private tutor at Rugby?—Yes, as soon as he got into the middle of the school.

1728. (*Lord Lyttelton.*) You mean, the boarding-house tutor is a private tutor?—Yes.

1729. (*Lord Clarendon.*) When a boy got into the middle of the school he was obliged to have a private tutor?—Yes; he must have one, because there is a special classical subject, which is called extra; but you really must do it if you want to have any position in the form at all.

1730. Was that paid for as an extra by his parents? Yes; I think it was 10*l.*

1731. Will you tell us exactly what the private tutor did for the boy?—He used to take you when you first came and examine you, in order to place you in form; and after he had placed you, you used to have to go to him regularly every other day for an hour to be heard this classical subject.

1732. Was this classical subject part of the school work?—Yes, it was quite as strict as the school work. You must do it.

1733. I mean, it was not a subject in class?—No.

1734. (*Lord Lyttelton.*) Who would be the private tutor in the case of a boy who was in the school house?—There is generally some one who is called tutor of the school house.

1735. But not always?—It is Mr. Scott at present.

1736. It was not always so?—Yes, there is always some one appointed. There was Mr. Benson when I first went.

1737. When you say that a boy in the middle of the school has a private tutor, do you mean, that a boy who is in a boarding-house from the first does not consider his boarding-house master to be his private tutor till that time?—Well, he would; but I should not think it was so in the lower school.

1738. Not to do the extra work, you mean?—No, not to do extra work. I know, for instance, that foundationers did not have tutors till they got to the middle school.

1739. They lived with their parents?—Yes.

1740. I am referring to the case of a boy who was in a boarding-house all along?—He would have a tutor all along.

1741. Would he find any difference in rising in that part of the school?—It would be unpleasant, because he would want to be helped in his preparation.

1742. Would not he pay the same all through?—I do not think he need if he refuses to have a tutor; but I do not remember a case of anyone refusing.

1743. Generally speaking, all the boys in the boarding-houses are on the same footing as to the tutor?—Yes.

1744. Both for lessons and general superintendence?—Yes.

1745. (*Lord Clarendon.*) If a boy wished to read any particular subject with his tutor, could he do so; or does the tutor prescribe what it shall be?—The tutor, I believe, generally puts it to the vote in the beginning if you are in the sixth, and in the lower forms the masters settle it, and at the end of the half, each form is examined in that subject.

1746. That is in the business done with the private tutor?—Yes; it is called an extra. It counts an immense deal in the marks.

1747. It is a competitive examination between the different houses in the work done with the different private tutors?—It does come to that a great deal.

1748. You say that it procures a great number of marks?—A very great number.

1749. (*Lord Lyttelton.*) What examination do you call that?—It counts either in the long list at the end of the half, or in the extras.

1750. Do you call it the extras?—That is called the classical extra.

1751. (*Lord Clarendon.*) There is a good deal of excitement among the boys about it, is there not. They always know that it counts more than anything else?—Yes.

1752. Is there an *esprit de corps* among the different houses, as to which shall stand best in this extra work?—Of course there is among the higher ones. I do not know whether there is among the lower ones. I think they only regard their place in form.

1753. The honour of the house does not enter much into consideration?—No, except among the bigger ones.

1754. (*Mr. Thompson.*) Do you remember how long this institution has existed?—I do not know how long. It was there all the time I was there.

1755. Do you think, speaking from your own experience of Cambridge, that Rugby boys read more or less than boys occupying similar positions in other public schools; I mean the head boys of Rugby. Do you think they have read more or less than the head boys of Eton?—I think they have read more than the head boys of Eton and Harrow, but not more than the head boys of Shrewsbury.

1756. How many Greek plays do you suppose a boy, coming from the front ranks of Rugby up to Trinity or Balliol, would have read?—I suppose he would have read about ten.

1757. Including Aristophanes?—No, not including Aristophanes.

1758. Of Aristophanes, how many would he have read?—About four.

1759. About how many books do you think he would have read of Thucydides?—I should not think more than two.

1760. And of Herodotus?—There we never went straight through a book; we read mere extracts.

1761. Did you read Xenophon's Historia Græca?—I never was in the lower forms. It depended a great deal upon where you came in. If you came in high, you never read any of it.

1762. Demosthenes, and the Orators; did you read much of those?—There was one form in which we all read the Aphobus or Conon.

1763. That was owing to the assistance of one of the masters?—Yes.

1764. Would you have read the De Coronâ?—The chances are we should have read that. I think it was possible we should have read Æschines.

1765. Any Plato?—Yes; a tolerable amount of Plato.

1766. Three or four dialogues?—Yes.

1767. And I suppose a little sprinkling of Aristotle?—I do not think we read any Aristotle. I never read any.

1768. You have read in proportion in Latin authors, I suppose?—Yes.

1769. Rather more perhaps?—I do not think it would be more, because in the sixth we had it equal: we always had the four subjects.

1770. How many books of Livy would you say a model boy would read?—Well, I suppose about three. I do not think more.

1771. And Tacitus?—Well, Agricola and Germania.

1772. And of Cicero's orations?—Generally one.

1773. (*Lord Lyttelton.*) Any of his philosophical writings?—Yes; we used to read them in the sixth; the De Naturâ and always some of the Tusculans.

1774. (*Mr. Thompson.*) And any poetry, I suppose in proportion?—Yes.

1775. You had read all Virgil probably?—I do not think we had.

RUGBY.

H. L. Warner, Esq.

16 Dec. 1862.

1776. (*Lord Lyttelton.*) Had you read the Georgics?—Yes; and the Eclogues.

1777. (*Mr. Thompson.*) And the Æneid?—Yes; I did some I think; it depends so very much on whether you stay a long time, of course.

1778. Horace you would have read through, I suppose?—Yes.

1779. And Juvenal?—I did not read a word of Juvenal.

1780. That was accidental. It is not forbidden in the school?—No.

1781. Lucretius would be read in extracts, I presume?—No; Dr. Temple read a great deal of that. We read three books. When he first came he read very fast, faster than he is reading now.

1782. Now as to plays, Terence or Plautus?—We read three plays of Plautus.

1783. (*Lord Clarendon.*) Is there a great deal of independent work done?—I should say next to none.

1784. In that the industrious boys were not industrious?—They spent so very much time over copies, exercises.

1785. (*Mr. Twisleton.*) So that their time is occupied in fact?—I think it is pretty well.

1786. (*Lord Clarendon.*) Do you think there is too much original composition at Rugby?—I think there is too much original Latin prose. I think we have Latin themes too often.

1787. And not sufficient translation, turning English into Latin?—I do not think there is sufficient Latin or Greek prose translation.

1788. (*Lord Lyttelton.*) Into Latin?—Into Latin or Greek.

1789. Is there any Greek prose writing at all?—There is when you get into the two higher forms, I think.

1790. (*Mr. Thompson.*) Did you ever know a boy at Rugby who could write moderately good Greek prose?—I do not think I can say.

1791. (*Lord Lyttelton.*) Do you think there is enough translation from Latin and Greek into English?—I think there is quite enough of that.

1792. Is there a good deal of it?—We used to have it at fourth lessons, between five and six, and then we had to take it down and translate it in school; take it down from dictation, and then write it out.

1793. (*Mr. Thompson.*) That is, Latin or Greek?—Yes.

1794. (*Lord Lyttelton.*) Into English?—Yes.

1795. Was it thought important with reference to the power of writing English?—Yes.

1796. Did they repeat a great deal by heart?—No; I do not think they repeated by any means enough.

1797. (*Mr. Thompson.*) How much do you think they do?—It is not that they do it; they generally say very little. I do not think they are strict enough about it.

1798. How much is supposed to be recited?—They sent in as little as 10 lines.

1799. Would that be considered an average task?—20 was generally what we did.

1800. But 20 would be enough if it was done well?—If it was well done; I do not think it is well done, as a rule.

1801. (*Lord Clarendon.*) Did this insufficiency of translation from English into Latin and Greek occur to you at the time, or has experience shown it to you since you have been at the university?—I think it occurred to me at the time partly, and of course I have seen it more since I have been at the university.

1802. You think if there had been more translation it would have given you greater facility at Cambridge?—Yes, I think so.

1803. In fact, you felt the want of it there?—Certainly.

1804. And your opinions on the subject, which you formed at Rugby, have been strengthened since you went to Cambridge?—Yes.

1805. (*Sir S. Northcote.*) Boys who went up from Rugby to try for open scholarships, felt themselves at some disadvantage in consequence of not being practised at translations, did they not, occasionally?—I should think they would, certainly, in Greek prose; I do not know that they would in Latin.

1806. (*Mr. Vaughan.*) Would you ascribe any deficiency to Rugbeans either in the habit and power of interpreting difficult classical passages, or of rendering into adequate English choice passages on paper?—I do not think it would be in finding English, because I think we had enough translating into English, but it was in the translating out of English that we did not do enough.

1807. (*Lord Lyttelton.*) Do the boys help each other in composition at all?—Yes, a good deal.

1808. That is not thought ill of by the general feeling of the school?—No.

1809. Do they make use of translations which the masters are not supposed to allow?—A great many of them do; I think it is pretty even.

1810. (*Lord Clarendon.*) Do the boys prepare their lessons alone or together?—It just depends on the character of the boy, and whether there is a fellow he likes in the same form with him; there are so many chances.

1811. He has no other place to prepare his lessons in but his bedroom?—Yes, in his study.

1812. (*Mr. Twisleton.*) Do the boys, before they say their lessons to the master of the form, construe their lessons to a tutor or to any one else?—Not to a tutor; they do to themselves. They construe it over.

1813. But to no tutor?—No.

1814. So that there is one preparation of their lessons, namely, for the master of the form?—Yes.

1815. (*Sir S. Northcote.*) Did they show their exercises up to more than one master? Did they show them up to a tutor before they were shown up in school?—They are shown up to the master in form; then he signs them; then they go to the tutor; then they have to write out a fair copy, and then go back to the master to be marked.

1816. They are looked over practically by two masters?—Yes.

1817. (*Mr. Vaughan.*) Supposing a præpostor sees a boy preparing his lesson with a translation, would that be a matter which he would be disposed to take cognizance of?—No.

1818. (*Lord Clarendon.*) What do you think are the principal stimulants to work at Rugby. Do you think it is the hope of a prize, the desire to rise in places in the school, or the fear of punishment?—I think those are the three chief ones. There would be the desire to rise and get a good position in the school, which would be a very great one indeed, and then prizes, of course, would be a great stimulus, because we have got an immense quantity of prizes at Rugby; and, of course, if there is a fellow low in the house, the sixth fellows would be perpetually at him, till he was anxious to get out of his form for the honour of the house.

1819. As far as you know, does the influence of home operate well on the boys?—I think it does.

1820. Speaking generally, the parents of boys at Rugby desire that they should advance, and take interest in their progress?—Yes; I should think that was the case at Rugby, particularly.

1821. (*Lord Lyttelton.*) The parents are very many of them in that class of life in which it is of some importance to them?—Yes; I should think there were very few who came to Rugby who were told, "Oh, it does not matter how you do."

1822. The general body of the school took great interest in the public competitions, and the prizes, and so on?—Yes, I think they did, certainly.

1823. (*Sir S. Northcote.*) Do you think the boys are at all overworked?—No, I do not think they are.

1824. (*Mr. Vaughan.*) How are the boys satisfied with the working of the parallel forms?—I think they are very glad that they get out quicker than they used to; the fellows who are good fellows

having to go through so many forms, of course lazy ones found there was more chance of their remaining low.

1825. But how are they satisfied with the fairness of it, as between two forms that are parallel?—They think it is fair. Of course, if there is one master who is popular, and one who is unpopular, there would be a great rush to get into the popular master's form.

1826. Do they think that arrangement is satisfactorily managed at present?—I think they do.

1827. (*Sir S. Northcote.*) How is it decided which of the two parallel forms a boy goes into?—If the fellow was the pupil of one of the masters, he would go into the other master's side to a great extent; it is a good deal chance.

1828. I mean when you talk of a rush to get in, is there anything that a boy can do to get himself placed in Mr. A.'s form rather than Mr. B.'s?—He would go to his tutor, and say, "Do get me into Mr. "A.'s if you can."

1829. Who settles it, Mr. A. or the Head Master?—I think it is decided by the Head Master, but I do not know; it is a state secret.

1830. (*Mr. Thompson.*) It would be a very great disadvantage, would it not, in many cases, for a boy to miss being under an eminent teacher in consequence of this division of the form?—Yes, that would certainly be a disadvantage to him, but I think the chances are pretty even of getting a good master.

1831. And the next time he may get a better?—Yes.

1832. (*Mr. Twisleton.*) It might also happen that he might evade an inferior master?—Yes; I have known some cases where a boy's master has been moved up with a fellow at the same time; that is very objectionable. I think there would be the same objection to the double remove which would be the other plan they would have to adopt.

1833. (*Mr. Vaughan.*) Would a boy high in the school feel a disadvantage in having been under an inferior master for half a year. Do you think, as a matter of fact, it was felt by the boy himself?—Well, of course if there were a master who had got a bad name, it would be the fashion to say, "What a nuisance it is!"

1834. (*Mr. Thompson.*) That might be made up to him in some measure by his private tutor?—Yes; that is one of the advantages of having a private tutor.

1835. (*Lord Lyttelton.*) How many hours do you think a studious boy worked, taking the whole work together?—I should think he would be in for an hour at first lesson.

1836. I do not want the particulars, but the sum total of the work of a studious boy fond of it?—Supposing he went in for games at the same time, I should think he must do about eight hours.

1837. And, perhaps, close to the vacation a little more?—Yes.

1838. (*Sir S. Northcote.*) He would work eight hours on full days, or on the average, do you mean?—I should think that would be a tolerably full day.

1839. Do you think they work more than 30 hours a week?—I should think so.

1840. (*Lord Clarendon.*) Is there much intercourse between the Head Master and the other masters and the boys?—Very much, I should say; there is a very great deal between the Head Master and the boys, and with most of the under masters.

1841. (*Lord Lyttelton.*) What intercourse was there between the Head Master and boys in the lower part of the school?—Well, he would always come across them when he went round the forms; if they were in his house of course he would always see them; then in the Close he is always about.

1842. Does he go among them in the games?—Yes, he is always there.

1843. The personal character of the Head Master was very perceptibly felt?—Very perceptibly, indeed.

1844. (*Lord Clarendon.*) There were kindly relations between him and the boys?—Yes.

1845. (*Lord Lyttelton.*) Not merely in his public character, but as an individual?—Yes.

1846. And with the other masters, too?—Yes; I should say the general feeling was very good.

1847. (*Lord Clarendon.*) In fact, they were all in the same boat together?—Yes.

1848. (*Mr. Thompson.*) Was it usual for the masters to join in the games?—Not as a rule.

1849. There were exceptions?—Yes, about four or five would join; one of them was the best player in the school.

1850. At cricket?—No; at football.

1851. (*Lord Clarendon.*) How much time is given to modern languages at Rugby?—About two hours a week in school. Of course, you have to prepare your lessons and do your exercises.

1852. Is much attention paid to the masters during the lessons?—I think so.

1853. Do you think there is a desire to get on in modern languages?—I think so.

1854. Their importance is recognized?—It counts in marks a good deal, and that is how they estimate it.

1855. How is the French taught there; in classes?—Yes; they have to go in and take an exercise, and then construe some out of a book.

1856. It is part of the Rugby school work?—Yes.

1857. There is one gentleman who is, I think, a German?—Yes.

1858. (*Lord Lyttelton.*) One German, and the other an Englishman?—Yes.

1859. And the German has never any difficulty in keeping order there?—I do not think he has.

1860. Has not the foreigner more difficulty than the other in keeping discipline?—I do not think he has, but he is a very able man.

1861. Has not the Englishman a great advantage?—I should think as a rule certainly an Englishman would have.

1862. (*Lord Clarendon.*) Did you acquire any proficiency in French at Rugby?—I did not do any French while I was there; I did German.

1863. Did you know any German before you went there?—No, none.

1864. What were you able to do when you left Rugby; could you read an average German book with facility and ease to yourself?—Yes, pretty well. We used to read books like Max Müller's Selections, looking out about six words in a page.

1865. Could you read Schiller?—Yes, pretty well.

1866. (*Mr. Vaughan.*) Could you do it well by grammatical rules; could you have parsed it as you would a Greek sentence?—Yes; they were very particular about that.

1867. (*Sir S. Northcote.*) Could you speak it at all?—No, we could not speak it.

1868. (*Lord Lyttelton.*) There was no practice, I suppose?—When M. Vecqueray came they began to speak to him for about an hour.

1869. (*Mr. Twisleton.*) Did the boys like learning German?—Some wanted to learn it very much.

1870. (*Lord Lyttelton.*) What was the feeling about German and French; do you think the boys had more liking for one than the other?—I do not know. French was not learned in the higher forms while I was there; they only began lately.

1871. Has it ever occurred to you since you have left, from what you have seen at the university or elsewhere, that the French ought to have been taught more?—I thought the French ought to have been taught more than it was, but it was taken for granted that you knew it.

1872. Was it the impression of the school that German was of equal importance with French?—Yes, I think so. Of course, in the middle school they always learned French, but it was in the upper school that they did not learn French.

1873. If a boy took to learning French in the upper part of the school at Rugby, with what object

RUGBY.

H. L. Warner, Esq.

16 Dec. 1862.

do you think he did so?—It would depend a great deal upon what he was going to do in after life.

1874. For what sort of career in after life would you say that German would be of importance to him as a student?—I should say that the classical fellows at Rugby rather thought it was unnecessary. There was rather a feeling that it was *infra dig.*

1875. Was it not optional to them whether they should learn German or French?—When I left we always had German as a matter of course. I believe since they have got French parallel with it, and they do both.

1876. Was it not felt that French would be wanted for them in the intercourse of life?—Yes; but it was always supposed that they ought to know it.

1877. With what purpose did they think the German was learnt. Was it merely as an exercise, or was it for the literature?—No; for the travelling I should think, most. I do not think they had any great idea of the literature.

1878. (*Mr. Vaughan.*) There was a part of the school in which they were compelled to learn French?—Yes; the middle and the lower school.

1879. (*Mr. Twisleton.*) When you left, could you yourself with tolerable ease read a French book?—I did it when I went there. I did not learn French there.

1880. When you left were you still able to do so?—Yes.

1881. When you left Rugby, you were able to read easy French and German books?—Yes.

1882. (*Lord Lyttelton.*) Were you required to pronounce accurately?—Yes; that was the object of introducing the conversational class.

1883. The conversation was thought an important point?—Yes.

1884. Do you apprehend the boys who could pronounce French well on arriving at Rugby would keep it up well?—I think they would do that. I think all the other fellows who did not know French and German would take care to exercise them whilst they were there.

1885. (*Mr. Vaughan.*) There was an alternative at Rugby, was there not, between learning modern languages and learning physical science, or was that not so in your day?—Yes, it was the case in my day; but I do not know much about how the other thing was conducted.

1886. Do you happen to know whether there were many who took advantage of the alternative in favour of the physical sciences at the top of the school?—I should not think there were many; I should think about four or five in the sixth.

1887. They were not allowed to learn it in the lower part of the school, were they?—I think they could in the upper school.

1888. But they were not allowed to learn it in the lower school?—Not unless they showed that they really did know something about it; I believe they were then.

1889. (*Lord Lyttelton.*) Do you think there was any feeling in the school about learning modern languages, that it was an interference with the school-work, or superfluous?—I should say, that probably the higher classical fellows did think that they were a bore.

1890. Do you think it would be an unpopular thing among the boys to give them a more solid place in the school teaching?—I think it would; more solid than they get at present.

1891. (*Lord Clarendon.*) Did you pay much attention to history and geography when you were there?—I do not think we did enough by any means.

1892. Are you alluding to modern history, or ancient?—Modern.

1893. Was there any instruction given in modern history and geography?—It was just a chance till we got into the sixth. We had only one day that we learnt history, and the master generally chose ancient history.

1894. (*Mr. Thompson.*) Had you not some regular course of history through which every boy went?—We always had to learn Smith's History of Greece, and a history of Rome.

1895. (*Lord Lyttelton.*) Was Dr. Temple the Head Master the whole time you were there?—Only three years.

1896. Previously it was Dr. Goulburn?—Yes.

1897. How is modern geography taught. Is it taught separately, or combined with anything else?—I think it is generally combined with something else; except that you have occasionally to do a map.

1898. What part of the school do maps?—I think all the school do now.

1899. (*Lord Clarendon.*) What maps. Is it tracing maps only?—Tracing maps, chiefly to show the physical bounds.

1900. You stated you did not think there was enough attention paid to modern history and geography, and you have given a clear account of the manner in which the time is filled up at Rugby; how would you propose that modern history and geography should be introduced. Would you advise that something should be subtracted from the present curriculum, or do you think that these subjects could be superadded?—I think they might have taken a little out of the classics. One hour a week would not have taken much out of the work.

1901. Supposing you were able to subtract anything from the classical work, what would it be, verses?—No; I think I should take out some translation. Just one hour.

1902. There is some attention paid to natural science is there not, at Rugby?—Yes, there is.

1903. Chemistry is included?—Yes.

1904. That was only just beginning, I suppose, when you left?—It was only just started when I left.

1905. Was there any instruction in drawing and music?—You could get it extra.

1906. And that did not count as part of the regular school work?—It did not give marks. I believe drawing does gain marks now at the examination at Christmas.

1907. (*Mr. Thompson.*) You were speaking of two years ago?—Yes.

1908. (*Lord Devon.*) Have you ever seen reason to think that the attendance on the class, either of physical science or of modern languages, has been entered into with a view of getting off part of the school work?—Yes, I think they got off verses.

1909. I only meant to ask this; have you reason to think that the less clever or the less industrious boys have gone into the modern language or the physical science line in order to save themselves from work in other departments?—No, I do not think so.

1910. (*Mr. Thompson.*) You say that you think modern history is deficient, but is it not the case that a considerable portion of modern history has to be prepared for the examinations?—Yes, certainly; you may take it in as an extra.

1911. And at the examinations for scholarships in June?—Yes, there it would come in, because Dr. Temple generally reads modern history with the form, and that is the exception.

1912. You are examined; it tells towards the result, does it not?—Yes.

1913. (*Sir S. Northcote.*) Did boys read modern history at all themselves?—Yes, I should say some of them did.

1914. Was there much private reading of modern literature?—I do not think there is very much.

1915. Did boys read much poetry?—Yes, a good deal of poetry, and Carlyle.

1916. Do you suppose many of the boys had read Shakspeare?—Yes, a great many read Shakspeare, and whilst we were there we occasionally read Shakspeare together.

1917. Carlyle you mentioned; was Carlyle a favourite author?—Yes.

1918. What other modern authors should you say were favourites?—I think they generally were novels.

1919. (*Lord Devon.*) Was any poet particularly

favoured—Tennyson?—Yes, they always took out Tennyson; I do not know how much they read it.

1920. Wordsworth?—I do not think much Wordsworth.

1921. (*Lord Lyttelton.*) Living authors, I suppose, more than others?—Yes.

1922. Did they read Macaulay?—Yes.

1923. (*Mr. Thompson.*) Were they obliged to read any of what is called classical poetry, such as Dryden and Pope?—No, I do not think they took that out, except in reading Homer and Virgil.

1924. (*Mr. Twisleton.*) I suppose Shakspeare?—Yes.

1925. (*Mr. Thompson.*) A boy might leave Rugby without having read a line of Dryden?—Yes.

1926. (*Sir S. Northcote.*) What sort of novels were they, Sir Walter Scott's?—Sir Walter Scott and Kingsley were very popular; Dickens, of course.

1927. (*Mr. Thompson.*) Thackeray, perhaps?—Thackeray was not a favourite so much.

1928. (*Sir S. Northcote.*) Had you a debating society?—Yes, we had it. There would be a pause for a half, and then it would start again.

1929. What sort of subjects were debated there; politics at all?—Yes.

1930. Quite modern politics, the politics of the day?—Yes; we used to have questions on that; the present Government was one.

1931. (*Lord Lyttelton.*) Had you historical questions as well?—Yes; we always had Charles the First.

1932. Was that a regular institution. Was it always held in the same place?—Yes; but then it used to stop for about half a year, and then go on again.

1933. Though it was suspended, was it the same institution. Did you keep its records?—Yes, we kept records.

1934. Of the debates?—Yes, that is to say, of who spoke; not of what they said.

1935. You could tell when it was founded?—Yes; and there was a printed book of rules.

1936. (*Sir S. Northcote.*) Were boys elected into it?—Yes, by ballot.

1937. How were boys elected into it; was it that the boys who were most distinguished in the school were generally elected, or was it a question of popularity?—It was always a great dispute whether we should elect fellows who could speak, fellows to do the society good, or the society to do the fellows good.

1938. (*Lord Lyttelton.*) How many members were there?—Thirty-three.

1939. Was it reckoned a distinction to be elected into it?—I think it was.

1940. Did the school take interest in it?—Yes, I think they did.

1941. (*Sir S. Northcote.*) Were they all in the sixth?—No.

1942. About what proportion of them may have been of the sixth?—About 18 would be.

1943. (*Lord Lyttelton.*) The sixth had no positive prerogative above the others?—I am not sure; I do not think they had.

1944. What time of day did you meet?—We generally met at 2, directly after dinner.

1945. How long would the debates last?—It went on till 4.

1946. Would a speech last as long as 20 minutes or half an hour?—Yes, it might, certainly.

1947. Would the boys take pains and read up in order to prepare for the debates?—Certainly.

1948. Do you think the boys acquired a certain amount of historical and other knowledge, through the society?—I think so, certainly.

1949. (*Sir S. Northcote.*) Had the boys any magazine or periodical of their own writing at the time you were there?—Yes, a book called "The New Rugbean."

1950. (*Mr. Twisleton.*) Was it possible for boys at lessons to miss reading their lessons often without being detected?—I do not think it was, because there is a chance that a master interposing questions would see that a fellow did not know much about it, and he would at once put him on.

1951. In the same way, when lines were learned by heart, when boys had to repeat lines by heart, was it possible for them to shirk learning the lines?—In one form it was generally very easy.

1952. Will you explain why in that form?—Because the master did not adopt the system of hearing them all, and in most forms they would have them all up one after another.

1953. Did a boy know whether he was likely to be set on, and if set on, did he know where he was likely to be set on?—I do not think he could well guess.

1954. (*Mr. Vaughan.*) Was it the case at Rugby that the boys who were distinguished as scholars were also good at the games of the school?—I should think it was. In the case of football it was, certainly, because a sixth fellow was supposed to take a "cap" directly he became a sixth fellow. and we had a sixth match and a fifth form match, which made you very anxious to play football very well for the sake of the sixth.

1955. With regard to the cricket?—Cricket was just a chance I think, generally. They played because they had been there longer than most.

1956. They did not drop out of it as a class?—No.

1957. Now, for instance, in the eleven, which represented the best players of the school would you have a fair sprinkling of men who were quite high in the school?—Certainly; sometimes we could play the school. The football kept that up very well indeed, because the head of the school was, *ex officio*, head of football, so he always had to play.

1958. Was not the hounds a regular part of the games at Rugby?—Yes; hare and hounds.

1959. That was chiefly for running and jumping hedges?—There were two things. There was hare and hounds, and house leaping. Hares and hounds was simply a run out into the country—a fixed run which one knew, and at house leaping, you went out jumping the brooks and the hedges, and there were always one or two jumps the beauty of which was that you must get in.

1960. (*Lord Lyttelton.*) They were both very hard exercise, were they not?—Yes; house leaping came on in ordinary when we had nothing else to do.

1961. What was the length of the run—very long was it not?—Some were very long.

1962. (*Lord Clarendon.*) Ten miles were they?—Yes, even 12.

1963. (*Sir S. Northcote.*) Has not Dr. Temple altered the length of the run?—He makes them have notes, before they run out, from the doctor. It is very seldom such long ones are run. They are most of them about five or six miles.

1964. (*Lord Devon.*) You say boys must have a note from the doctor, does that apply to every boy, or only those who wish to get them?—It applies to all who run for the "Crick."

1965. (*Lord Clarendon.*) I think you said it was about two years since you left?—Yes; I left in June.

1966. There has been time enough therefore for you to reflect on the time you passed at Rugby. Do you look back to it with satisfaction. Do you think that time was as well employed as it could have been in an educational point of view?—I think it was as much so as it could have been.

1967. You could not imagine any better manufactory for turning the raw material to the best account?—No.

1968. And, with the exception of one or two matters that you have alluded to, perhaps not sufficient translation into English, and not time enough given to the modern history and geography, which you think might be usefully substituted for some part of the classics, there is nothing that you would suggest or which occurs to you for the honour of the school and the advantage of those who attend it,

RUGBY.

H. L. Warner, Esq.

16 Dec. 1862.

which could be materially altered?—I do not think there is anything at all.

1969. (*Lord Lyttelton.*) Do you find the position of the Rugby boy generally as good as any other at the university?—I think so.

1970. (*Lord Clarendon.*) In short, as far as you can judge, the system at Rugby is as near—I will not say perfection, but is as good as the system of a public school could be made?—I think so, certainly.

1971. In fact, you look back to the education you received there with gratitude and satisfaction?—Most decidedly.

Victoria Street, Wednesday, 17th December 1862.

PRESENT:

Earl of Clarendon.	Hon. Edward Twisleton.
Earl of Devon.	Rev. W. H. Thompson.
Lord Lyttelton.	H. Halford Vaughan, Esq.
Sir Stafford Northcote, Bart.	

The EARL OF CLARENDON in the Chair.

A. Sidgwick, Esq.

17 Dec. 1862.

Arthur Sidgwick, Esq., called in and examined.

1972. (*Lord Clarendon.*) How many years were you at Rugby?—Six years.

1973. When did you leave it?—In the summer of 1859.

1974. Did you go straight to Trinity College, Cambridge?—Yes, in October term following.

1975. And you are at Trinity now?—Yes.

1976. Would you have the goodness to give us your opinion of the monitorial system at Rugby, both the duties and the powers of the monitors, and the way in which they are exercised?—The duties are generally to look after the morality of the school, to prevent all offences they know of, and to keep order in the houses.

1977. When you say the morality of the school, does that imply something more than the mere order and discipline of the school. I mean, do the monitors take care, as far as they can prevent it, that there is no drinking, gambling, nor bad language?—Yes.

1978. The checking of these would all come within the duties of a monitor?—Yes; all of them.

1979. And do you consider that those duties are strictly performed?—Yes; I think very fairly indeed.

1980. The authority of the monitor in those respects is cheerfully acknowledged?—Yes.

1981. And supported by public opinion in the school?—Yes, certainly.

1982. What effect should you say the exercise of that sort of power had on the monitors themselves. Do you think that it inspires them with a sense of responsibility or makes them arbitrary?—I think in most cases it inspires them with a sense of responsibility. It is looked upon as a matter of course by all who get into the sixth form, that they shall have these powers, and in most cases that they shall exercise them properly.

1983. And a monitor in exercising those duties, does not make himself unpopular?—No.

1984. He would rather lose respect if he did not exercise it properly?—Yes, certainly.

1985. What punishments have the monitors power to inflict?—Impositions and caning.

1986. Which do they resort to most?—To impositions for small offences, but there are plenty of instances of caning.

1987. Is it caning on the hand or on the back?—On the back.

1988. What is the amount of imposition a monitor can set?—I do not fancy there was any limit; I never heard there was any.

1989. Except his own judgment?—His own judgment, and subject to an appeal to the Head Master, or the master of the boarding house.

1990. Is there often an appeal from the monitor to the master?—I have known a few cases; not many.

1991. (*Lord Lyttelton.*) What is the maximum length of an imposition?—An ordinary length is about 300 lines.

1992. It is beyond that sometimes?—Yes; it is occasionally doubled for contumacy.

1993. Is it ever as low as 50 lines?—Yes.

1994. (*Lord Clarendon.*) To write?—Yes.

1995. Is there ever any repetition?—I have never known any.

1996. I suppose in general the master upholds the position of the monitors?—Yes; almost universally.

1997. Appeals are not encouraged?—No.

1998. (*Sir S. Northcote.*) Do you require what is written to be written decently, or do you take anything?—We take anything.

1999. (*Mr. Thompson.*) Has that a good effect on the handwriting of the school?—Very bad, I should think.

2000. Do you think Rugby boys write much worse in consequence of this practice of impositions?—I do not think so.

2001. You mean, perhaps, that the tendency was bad, but that it was counteracted by the efforts of the boys?—Yes; and also that other boys have to do impositions in other schools, if not for the præposters, for the master.

2002. You think, perhaps, that the average handwriting would be better throughout the public schools if the practice of impositions were not so general?—I think it is possible.

2003. (*Lord Clarendon.*) Was there much drinking or immorality of any kind at Rugby?—There were very few cases I knew of.

2004. Were those of drinking?—Yes; there were four or five of drinking that were generally known of while I was there.

2005. Was the practice condemned by public opinion, or was it looked upon with indifference?—It was entirely condemned, I should say.

2006. You would say it was only confined to a very few?—A very few indeed.

2007. And the habit of the school was against anything of the kind?—Yes.

2008. Was there much bullying while you were there?—There was very little in public. I cannot answer for the boarding houses; of course it is possible it might have gone on in the boarding houses to a great extent without its being generally known.

2009. (*Mr. Thompson.*) You were a town boy?—Yes; I was not in a boarding house.

2010. (*Lord Clarendon.*) As you were a town boy, I will ask you as to your relations with the other boys of the school and the boarders. Were you on a perfect equality with them?—Perfectly.

2011. You never had any reason to think yourself at a disadvantage?—No, not in the least.

2012. And you would say the same generally for those who were town boys?—Yes; with the exception of those who were the sons of Rugby tradesmen.

2013. (*Lord Lyttelton.*) How many of them were

there?—There were none when I went there; and when I left there were about 20.

2014. And they were clearly at a social disadvantage, were they?—Yes, I should say so.

2015. (*Mr. Thompson.*) How do you account for the increase in their numbers?—I do not know.

2016. Was any new regulation made giving them easier access to the school?—None whatever.

2017. It was merely accidental?—Yes.

2018. And these boys were not well treated?—Well, they formed a set by themselves; whether from necessity or from choice I cannot say.

2019. They were not bullied?—No.

2020. But rather what we should call "cut"?—They appeared to keep to themselves.

2021. (*Lord Clarendon.*) Were you a town boarder from the accident of your family residing there?—Yes.

2022. Habitually, or did they come to reside there?—They came to reside there on purpose.

2023. I suppose you were subject to being fagged just the same as if you were in a boarding house?—The town boys generally were.

2024. What was the system of fagging there. Who had power to fag?—Any member of the sixth form.

2025. At what distance from the school did you live?—About 600 yards.

2026. There is a prescribed limit, is there not?—I think it is three miles; three or five, I am not sure which.

2027. Where do the town boys have their meals?—At home.

2028. All of them?—Yes.

2029. There was no instance of a town boy boarding in the house, although he might go home to his parents of an evening?—There was no instance of that. There were some instances of town boys, that is to say, of the sons of people living in Rugby, who were sent to the boarding houses, who were permanently at the boarding houses.

2030. And who did not go home at night?—Yes.

2031. Your habit was to go home for your meals?—Yes.

2032. You had no meals whatever, except at home?—No.

2033. (*Mr. Twisleton.*) Do you consider there were some advantages connected with living at home, or do you think the plan of coming to the school and living wholly in a boarding house was better?—I should say on the whole it was far better to be in a boarding house for most boys.

2034. (*Lord Lyttelton.*) On what account?—Because they would mix better; they would generally mix more with the other boys, and they would not be subject to any home influence at their work, which might be deleterious.

2035. (*Mr. Twisleton.*) Might not home influences on their character be favourable?—Yes, that is possible.

2036. (*Lord Lyttelton.*) Do you think the full benefit of the public school system would be better enjoyed in the boarding houses?—I think so.

2037. (*Mr. Twisleton.*) Do you think a studious boy would have more opportunity of reading in a boarding house than he would at home?—I should say on the average he would.

2038. I am supposing a studious boy and a boy of some character; I am not supposing an idle boy, but a studious boy?—Yes, I think perhaps he would on an average.

2039. (*Lord Clarendon.*) You took your share in the games just the same as if you were in a boarding house?—Yes.

2040. You were not in the eleven, were you?—No.

2041. Did the home boarders spend their Sunday entirely at home, or did they go to the chapel with the other boys?—They went to the chapel.

2042. In all other respects your Sunday was passed like that of the other boys?—Yes.

2043. In the afternoons you had a good deal of leisure; did you spend them at home or with the other boys?—Frequently in taking walks with the other boys.

2044. In fact you were to all intents and purposes as if you were at a boarding house as far as mixing with the other boys goes?—Except, of course, in the evenings.

2045. (*Mr. Thompson.*) Do you think you were in as good a position to form friendships with boys in the boarding houses as if you had been yourself in one?—Yes, I think so.

2046. (*Sir S. Northcote.*) Could you judge at all, in your position, whether there was much difference between the position of the boys in the other houses, or had you any means of judging whether the boys in the school house were better off than the others?—No; I should not say they were better off.

2047. (*Lord Clarendon.*) The sermons were almost entirely preached by the Head Master?—Yes.

2048. Do you consider that they were attractive to the boys, that the boys liked them much?—As far as I can judge, I should say they did.

2049. (*Lord Lyttelton.*) Were you there in Dr. Goulburn's time?—Yes.

2050. And Dr. Temple's?—Yes.

2051. Did Dr. Goulburn preach as regularly as Dr. Temple does?—Yes.

2052. (*Mr. Thompson.*) As long, or longer?—As long. Perhaps rather longer.

2053. (*Mr. Twisleton.*) Do the sermons of the Head Master produce a moral impression on the boys?—I cannot say, I am sure.

2054. (*Lord Clarendon.*) Dr. Temple used always to have boys collectively first, and then individually, did he not, in their preparation for confirmation?—I do not know, because in the course of having the boys individually he would only deal with the school-house boys; I cannot say about the school-house boys; he had all the candidates for confirmation collectively.

2055. You would consider that a town boy would have the same advantages in his assistance and advice in preparing for confirmation as the other boys?—Yes, quite.

2056. And they of course attended the Sacrament the same as the school-house boys?—Yes.

2057. (*Mr. Thompson.*) It has been given in evidence that Dr. Temple was in the habit of giving Sunday lectures on the Old Testament to the boys in his own form; did you ever attend any of those?—Yes, always.

2058. Was that custom introduced by Dr. Temple?—No; it was before his time.

2059. Dr. Goulburn gave similar lectures?—Yes.

2060. Possibly it was a tradition from Dr. Arnold's time?—Yes, I should think so.

2061. (*Lord Clarendon.*) Did you have a private tutor when you were there?—Yes.

2062. From what period?—During the whole time I had a private classical tutor.

2063. Not when you got to a certain height in the school?—No.

2064. What did the private tutor do for you, or rather, what did you do with him?—He looked over one composition every week, and we had a lesson of an hour once every two days, three times a week.

2065. Did you go to him alone, or with others?—With others.

2066. You considered you derived great advantage thereby?—Yes, during the time I was in the sixth; not much before then, I should say.

2067. Why not?—Because it was frequently not more than an ordinary lesson.

2068. (*Mr. Twisleton.*) And then, when you were in the sixth, what was the difference?—The reason is, that the sixth pupils are taken by themselves. They were so much fewer; there was so much personal teaching.

2069. (*Mr. Thompson.*) You do not mean *seriatim*?—No; but just those who were in the sixth were taken by their tutor together.

RUGBY.

A. Sidgwick, Esq.

17 Dec. 1862.

2070. Were boys belonging to different forms taken at the same time if they were not members of the sixth ?—Yes, below the sixth.

2071. The number was not so manageable ?—It was as great as that of a form.

2072. How many would go to a private tutor taking the sixth ?—About five or six generally.

2073. (*Mr. Vaughan.*) Were some tutors regarded as very superior tutors to others ?—Yes.

2074. How did the boys feel who were planted with an inferior tutor ?—They felt their misfortune, I should say.

2075. Was it felt to be a serious disadvantage ?—Yes, certainly.

2076. But they could not remedy it ?—No.

2077. (*Mr. Twisleton.*) It was submitted to as inevitable ?—Yes.

2078. (*Mr. Vaughan.*) Was it such a disadvantage as would be felt in the competitions through the school, and the progress of a boy in the school ?—I should say so, certainly.

2079. Then I suppose that those who had the misfortune to get the least good tutor would have been not very sorry to have seen the system altered ?—No, perhaps not.

2080. Would they have considered it more fair, do you think, that under such circumstances there should be no tutorial system at all ?—Perhaps so.

2081. (*Mr. Thompson.*) Would it have been a choice of evils, do you think ?—I should say so, between a bad tutor and no tutor.

2082. (*Mr. Vaughan.*) Were the foundationers allotted to as good tutors upon the whole as the other boys ?—They had their choice of tutors.

2083. Had the parent the choice of a tutor ?—Yes.

2084. Was that an absolute choice, and was there no limitation of the number of pupils of each tutor that would exclude the parent often from exercising that choice ?—Yes, there was a number, I believe. I have an idea that a limit was placed after I went there, but I am not sure.

2085. Was it such a number as would virtually have the effect of giving all the masters in a school a fair share of pupils ?—Yes.

2086. And therefore of forcing the least eligible on the parents and boys ?—The least eligible tutors would always have some, but not as many as the more eligible.

2087. There would be a sensible difference according totheir character ?—The real qualities which make one tutor better than another are hardly likely to be generally known to the parents when they make their choice of a boarding house, and therefore of a tutor. Moreover, such choice is frequently directed by previous acquaintance or other accidental circumstances.

2088. (*Lord Devon.*) With regard to those who were not foundationers, how was the tutor selected there ?—It was either the master of the boarding house where the boy was, or he was selected by the parent in the case of those masters of boarding houses who were mathematical or modern language masters.

2089. (*Mr. Thompson.*) Did you, as a town boy, have your choice of tutors ?—Yes.

2090. Was not that a great advantage ?—Yes.

2091. But counterbalanced by disadvantages ?—Yes, I should say so.

2092. (*Lord Devon.*) How many pupils had he in number ?—About 55.

2093. Did that admit of anything like friendly personal communication with each boy, or did he only see them in classes ?—Yes ; because he always looked over their composition one by one.

2094. Was there any intimate relation between the tutor and the pupil more than that required by school work ?—There might be.

2095. Practically was there ?—Yes, practically there was, in a great many cases.

2096. In some cases the tutor was a friend of the pupil ?—Yes.

2097. Do you consider that that is a very satisfactory result of the relation ?—Yes, very satisfactory.

2098. You would say that that is an advantage traceable to the system ?—Yes, distinctly.

2099. (*Mr. Thompson.*) Do you think that the bad choice of a tutor ever within your knowledge has made a serious difference to any Rugby boy in his success at the school, and at the University afterwards ?—Well, I think I can say it has.

2100. (*Lord Clarendon.*) Do you think that the mode in which the tutor would impart his instruction, and the encouragement that he would thereby give to or withhold from the boy, would have an influence on his character ?—Yes.

2101. (*Mr. Vaughan.*) Were the tutors paid anything for the foundation boys ?—Yes ; as much as for the others.

2102. By the trustees ?—No ; by the parents of the boys.

2103. (*Mr. Thompson.*) Was that the only payment that the parents of foundation boys had to make ?—They had to pay a certain sum unless they had resided two years in the neighbourhood of the school before the boy was sent there.

2104. (*Lord Devon.*) Do you know what the total cost was of a foundationer ?—Before they were on the foundation, do you mean ?

2105. I mean those who were living in the town ; yourself for instance ; do you know what the total annual cost was while you were on the foundation ?—It was only the expense of the classical and mathematical tutor if there was one. There were also some small school fees, scarcely amounting to 1*l.* per annum.

2106. What was that ?—If there were two tutors it would be 20 guineas, if there was one it would be 10 guineas.

2107. (*Lord Clarendon.*) About how many town boarders were there ?—There were about 72, I think, when I left.

2108. Did those include the sons of tradesmen ?—Yes.

2109. Did that seem to be about a stationary number, or was there any notion that they were likely to increase ?—No, about stationary, I should think.

2110. What, so far as you know, was the effect upon these 70 boys of home influences ; should you say that those boys occupied in any respect a different position in the school ; that their characters were different, or that the result of home influence was manifested afterwards ?—No, I should think not.

2111. And that home influences, as they could only be of parents who came there for the purposes of education of their children, would be exercised in favour of their being studious ?—Yes, in some cases, but not in others.

2112. I suppose there was more school liberty to a boy on the foundation, by reason of his living at home, than to a boy in a boarding house ?—There was exemption from the boarding house fagging, that was the only difference.

2113. I mean with regard to hours and places. Was there not less restraint on the whole on the ways of a boy who was on the foundation than one who was in a boarding house ?—No, there was no less restraint.

2114. For instance, after locking-up hours, were they universally kept at home ?—Theoretically they were.

2115. But I meant rather to ask the practical effect ?—I think the laws were broken very frequently.

2116. Do you think they were ever broken for bad purposes. I mean to say, did you see any evil that resulted from their being broken, besides that of their being actually broken ?—Yes, in some cases.

2117. (*Mr. Thompson.*) In those cases the fault would probably lie with the parent or friend of the boy ?—Yes.

2118. (*Lord Clarendon.*) There was no school

supervision over the boy?—There was one official who was supposed to look after them—to walk about the town.

2119. A kind of proctor?—Yes.

2120. (*Mr. Vaughan.*) From their being under the superintendence of parents, did it not naturally occur that there was less disposition to look after them even by official persons?—No, I should say not.

2121. (*Lord Clarendon.*) Would your tutor ever read with you any other than the school work?—Yes, sometimes.

2122. If you wished to read any classical author that was not in use at the school at that moment, he would have read it with you?—Yes.

2123. (*Mr. Twisleton.*) Did you in fact have any private reading with your tutor?—Yes.

2124. Can you give an idea of what it was?—Reading wherever he thought your work was deficient; he would supply it by giving you extra composition, or reading a particular Greek play, for example, or anything of that sort.

2125. Did you read with him any Greek play which you did not read in the school?—Yes.

2126. And that was not uncommon?—It was not common, I should say; it was done in a few cases.

2127. Generally speaking, the work in the school was sufficient to take up a boy's time?—Quite, I should say.

2128. (*Lord Clarendon.*) What do you consider were the principal stimulants to work at Rugby; was it the desire to get a higher place in the school?—Yes; I should think competition principally.

2129. And there was a real spirit of emulation in the school?—Yes.

2130. The success and the progress of boys were narrowly watched?—Yes.

2131. And interest was taken in their success?—Yes.

2132. And all the prizes that were awarded were known throughout the school?—Yes.

2133. (*Mr. Twisleton.*) Holidays were given for the success of Rugbeians at either of the Universities?—Yes.

2134. (*Sir S. Northcote.*) Do you think that all boys are open to the stimulus of emulation, or do you think it tells more with some than with others?—It tells more with some than with others.

2135. Do you think there is a certain class of boys in the school, quiet boys well-disposed to work, who are not much acted upon by the motive of emulation?—Yes, certainly.

2136. Do you think the Rugby system is good for them?—Well, I do not know under what system they would be better off.

2137. (*Lord Lyttelton.*) Do you think those who are likely to obtain the highest places are more under the influence of emulation, than those who are not so?—Yes, I should say so.

2138. (*Sir S. Northcote.*) Do you think the effect of emulation is to make the tutors pay more attention to those boys who are likely to distinguish themselves, and who are keen to get on?—No, I should not say so, generally.

2139. (*Mr. Vaughan.*) Do you think that upon the whole the classical education of the foundationers commences, by reason of their being on the foundation, at an earlier period than the classical education of the boys not on the foundation?—Do you mean whether they went to the school earlier?

2140. Whether they received some school instruction earlier?—No, I should not say so.

2141. You do not think, for instance, that by reason of a boy being near a great school, where he could receive gratuitous education, he began to learn his Latin grammar, and to do regular school work earlier than the others?—No.

2142. And next, in point of age, how was it; were the foundationers, as they went up the whole school, as forward as the non-foundationers for their age?—Yes, quite.

2143. And did they succeed equally well in the school work. Do you think they held their own, in point of numbers, against the same number of other boys?—Yes, I think so, on the whole. Perhaps, on the average, they were a little below.

2144. To what should you attribute that?—To accident, I think, principally.

2145. Have they done as well in the University afterwards, on the whole, as the non-foundationers?—Yes, I think so.

2146. Have there not been recently some scholarships established towards the top of the school?—Yes. I do not know whether recently.

2147. There are some at present?—Yes.

2148. Were those open to the competition of foundationers?—Yes.

2149. Did the foundationers often succeed in getting them?—Yes.

2150. Were the foundationers a stronger set of boys, do you think, at football, and games requiring violent exercise, than those in the boarding houses?—No, I do not think so.

2151. (*Mr. Thompson.*) Nor weaker?—Perhaps rather weaker, as on an average they were rather younger.

2152. (*Mr. Twisleton.*) On the whole, do you think that their living at home made them read harder, or less hard than other boys?—Well, on the whole, I should say it made no difference.

2153. You do not think that their being slightly inferior to the other boys in knowledge, and their place in the school, had anything to do with that?—No, I do not think so.

2154. (*Mr. Vaughan.*) Had they, do you think, *cæteris paribus*, a preference for the exhibitions?—No, I believe not. There never occurred a case in which I remember that happening.

2155. (*Mr. Thompson.*) We have spoken of stimulants to work. Those stimulants were very effective at Rugby, whatever they were, I think?—Yes.

2156. A good deal of work was done in the school?—Yes.

2157. Comparing it, so far as your knowledge goes, with other schools?—Yes, certainly.

2158. Do you think it would contrast favourably with some other schools in that respect?—Yes.

2159. Do you think that the Rugby boys have read as much, for instance, of the classical authors, Greek and Latin, when they come up to the University, as boys from other schools?—I should say they had read generally more.

2160. More than is read at most schools?—Yes.

2161. Should you say than at any other school?—More classics, certainly, I should say.

2162. Than at all the schools within your knowledge?—Yes; except perhaps the Eton collegers.

2163. Are you acquainted with any Shrewsbury boys?—Well, except, perhaps, some Shrewsbury boys.

2164. How many plays should you say was a fair proportion for a boy to have read when he came to college; a first-rate Rugby boy?—About 15.

2165. Including Aristophanes, or not?—I was not including it at the time.

2166. He would have read most of Sophocles?—Yes, certainly.

2167. The whole of Æschylus?—No; only two or three of Æschylus.

2168. The easier plays?—Yes. This of course can be but a rough estimate, as no two boys would necessarily have read the same when they leave school.

2169. (*Mr. Thompson.*) Do you think that the time devoted to composition in the school was sufficient?—Quite sufficient.

2170. And not in excess?—I think the time devoted to original Latin prose composition in the sixth is in excess.

2171. Was that because the subjects were unattractive, or why?—Generally there was a dislike to write them.

2172. For want of ideas?—Yes.

2173. You think it is a better exercise for boys at

RUGBY.

A. Sidgwick, Esq.

17 Dec. 1862.

college to translate from English into Latin than to have to invent both matter and words?—Yes.

2174. (*Mr. Vaughan.*) Do you think that the encouragement of English verse writing amongst the head boys in the school was sufficient?—There is very little of it at all.

2175. Is it a fact within your knowledge, whether the value of the prizes for English verse at the head school have been diminished or not?—You mean the actual value of them?

2176. Yes?—No, I think not.

2177. (*Mr. Thompson.*) You have got several prizes at the University, have you not?—Two or three.

2178. (*Mr. Twisleton.*) Will you let us know what they are?—One for a Latin essay, and two in two successive years for a Greek ode.

2179. (*Mr. Thompson.*) You have also got prizes in the college?—Yes.

2180. What prizes?—One for Latin elegiacs, and one for Latin declamation, and one for an English essay.

2181. Perhaps you never knew, or do not bear in mind, the success of Rugbeians during the same years at Oxford in the prizes there?—I do not remember any.

2182. Any Latin verse, or English verse?—I do not think there were any prizes obtained by Rugbeians.

2183. The last year?—No.

2184. (*Mr. Vaughan.*) Or within the last three or four years, have they carried off any Latin verse prize?—No; not the last three or four years.

2185. (*Mr. Twisleton.*) How high were you when you left?—I was head.

2186. (*Mr. Vaughan.*) Have they carried off any Newdegate prizes?—One about five years ago.

2187. No Chancellor's Bachelors' English essay?—Not that I know of.

2188. (*Sir S. Northcote.*) You had a special master for composition, had you not?—For the sixth.

2189. Only for the sixth?—Only for the sixth.

2190. Had he a form in the working of the school?—Yes.

2191. Do you think that was an advantageous arrangement?—Very.

2192. In what way did he assist the boys?—In carefully looking over all their exercises with them.

2193. Did he set the subjects?—Yes.

2194. And the exercises were shown up to him as soon as they were done in the first instance?—Yes.

2195. Not to any private tutor, or anyone else?—No.

2196. And then did he examine them with the boys?—Yes.

2197. And give them particular instruction in the art of composition?—Yes.

2198. About how long did that take up in a week for each boy?—About twenty minutes or half an hour.

2199. How many exercises had he to look at?—He had two every week.

2200. Then he gave about ten minutes or a quarter of an hour to each?—Yes.

2201. He would send for the boys to come to him?—Yes.

2202. Were those exercises ever shown to anyone else afterwards?—In the case of great excellence they were shown to the Head Master afterwards.

2203. But not to any of the tutors or others?—Not necessarily.

2204. (*Mr. Vaughan.*) Do you think that if there were any class at Rugby like that of the Eton and Winchester college boys, that that would add still further to the celebrity of Rugby as a school, and to its successes in the university?—It might, by stimulating the best boys even more than they are stimulated at Rugby; but I think it would diminish the average.

2205. Do you think that the recent opening of the scholarships at Winchester, and schools like Winchester and Eton, has the effect of withdrawing boys from Rugby who might otherwise have come there?—I have not known any cases.

2206. Might it not very often happen that a boy would be destined for Rugby by his parents unless he succeeded at Eton and Winchester by force of his abilities and attainments?—Yes, that might be so.

2207. And in that way, are not Eton and Winchester necessarily drawing away some of the best materials from a school like Rugby, while Rugby is not acting upon them in a similar manner?—I should not think that would happen very often.

2208. (*Lord Devon.*) It is sometimes said with regard to some public schools that they may be good for encouraging and bringing forward boys of remarkable natural ability, but that not much is done for those who are deficient in natural ability, however much they may possess industry; do you think that the system at Rugby would be beneficial for both these classes of boys, or not?—Less to the best boys, I should think.

2209. Why; in what respects?—Merely because it was more directed generally to all classes of boys.

2210. Should you say that an insufficient encouragement was given to boys of remarkable ability, or not?—Not so much as might have been, perhaps; not as much, for example, as is given at Eton to the best collegers.

2211. What additional encouragement would you suggest; more prizes, more rapid promotion?—No, I do not think in the present state of the school any additional encouragement could be introduced.

2212. But, if practicable, you think it should be introduced?—Yes.

2213. Could it be introduced without giving something of disadvantage to the others in the other class to which I referred, namely, the steady boys without great natural ability?—I do not know.

2214. Now, take another class of boys, those who may or may not have natural ability, but who have no industry, and are very idle; is enough done to make them work?—Yes, I think so.

2215. And, practically, does it answer; can a boy be idle, in short, at Rugby?—Yes.

2216. Can you suggest any mode by which a boy can be prevented from being idle?—I cannot.

2217. Do the masters look after them as much as practicable?—Quite, I think.

2218. (*Mr. Vaughan.*) I believe there are certain standing rules at Rugby, that at given ages a boy must be in particular parts of the school or he must depart?—Yes.

2219. Is that rule, should you think, acted upon?—I think I have known several cases where it has not been.

2220. Supposing that rule to be faithfully acted upon, does it not necessarily prevent the idleness of boys going beyond a certain extent?—Yes.

2221. Beneficially so to others?—Yes, I should say so to the rest of the school.

2222. Would you mention in what points?—Merely by removing those boys.

2223. Are they generally boys in other points who it would be desirable for the interests of the school should be removed?—In most cases.

2224. (*Mr. Thompson.*) And in exceptional cases they would be allowed to stay, perhaps?—Yes.

2225. There may be cases in which boys of excellent character may be of slow understanding?—Yes.

2226. And those boys, you think, are properly retained?—Yes.

2227. (*Mr. Vaughan.*) When you speak of the rule not being universally applied, should you say it was universally applied with the exception of such cases as have been just pointed out to you?—Yes.

2228. (*Lord Clarendon.*) Did you pay much attention to foreign languages?—Not very much; there was not much chance of so doing.

2229. You had to learn either French or German?—Yes; but it is not very well managed; the lessons, especially in the sixth form, are placed at inconvenient hours, and there is every tendency to make one shirk the work.

2230. In what way ?—The lessons in modern languages are two in the week, and they both come immediately after a classical lesson. I think it is desirable that every lesson to which attention is to be paid should have at least an hour before it vacant.

2231. (*Mr. Twisleton.*) For preparation ?—Yes.

2232. (*Lord Clarendon.*) Do the boys pass from the classical room to the foreign languages ?—Yes ; at least the classical master retires and the modern language master appears on the scene.

2233. (*Mr. Thompson.*) In the same room and the same atmosphere ?—Yes.

2234. (*Mr. Vaughan.*) Does that act to the disadvantage of both lessons, or to the disadvantage only of the modern language lessons ?—Principally to the disadvantage of the modern languages. That arrangement is only in the sixth.

2235. (*Lord Clarendon.*) There is a better arrangement in the other parts of the school ?—Yes.

2236. When you were in the lower parts of the school, did you get more modern languages ?—Yes, rather more.

2237. It was not a subject which was taken up heartily by the boys ?—No.

2238. I think it was by the masters, was it not ; Dr. Temple gave value to it ?—I think it has been improved lately. There has been some stimulus lately.

2239. (*Lord Lyttelton.*) Do not the boys feel the importance of it with reference to their future life ? —I am afraid not.

2240. (*Mr. Twisleton.*) When you left Rugby could you read any common French work ?—No, not without copious use of the dictionary.

2241. And could you read any German ?—I knew rather more German, but not much.

2242. (*Lord Lyttelton.*) You had left off French, and taken to German ?—Yes.

2243. That was the custom ?—That has been altered now.

2244. (*Mr. Vaughan.*) Did you not know French better when you left the school than you did when you left it off ?—No, I do not think so.

2245. In fact, you did not keep it up ?—No, not at all.

2246. Then you must have fallen off ?—Yes.

2247. (*Lord Clarendon.*) It was of no value to you in your school work ?—None whatever.

2248. (*Sir S. Northcote.*) Do you think that was more felt by the boys who were working hard for classical distinctions than the other boys. Were there a certain number who learnt modern languages, and paid more attention to them than to classics ?—There were one or two who paid attention to modern languages, but in those cases generally to the exclusion of the classics.

2249. A boy who was aiming to get classical prizes would deem it a waste of time to give much attention to modern languages ?—Yes.

2250. (*Mr. Vaughan.*) Should you say that the boy who worked in classics worked usually also in modern languages more than the boy who was idle in classics ?—Perhaps so.

2251. (*Mr. Thompson.*) Was there no feeling on the part of the good scholars that German might be of use to them in their own line ?—I think not.

2252. In classics ?—I do not think so.

2253. You hold that opinion now, do you not ?—Yes.

2254. Had you sufficient acquaintance with German to make any use of it in your classical studies ?—No.

2255. (*Mr. Twisleton.*) Are you keeping up German now ?—No.

2256. (*Mr. Vaughan.*) Do you think that any boys in the school use German commentaries written in German ?—No.

2257. Or German dictionaries written in German ? —No.

2258. (*Mr. Twisleton.*) I find of the boys who left Rugby during the year, in the last summer, 39 only went to one or other of the universities, and 101 to neither. Now, among this 101 who did not go to any university, would there not be some who would have desired very strongly to have learnt French or German ?—Yes ; I think there might be in that case.

2259. That class of boys would be more likely to study those languages ?—Yes.

2260. (*Lord Lyttelton.*) Bearing on what has been just stated as to the large number who do not go to the universities, do you think the general sense of the boys is that the studies at the universities determine very much the *status* of the school ?—Yes, I should think so, with those who think about it at all.

2261. (*Mr. Vaughan.*) Do you believe that all those boys who do not go to the university know during their career that they are not going there ?—Yes, I think so.

2262. Do you think the consciousness of not being intended for the universities acts on the majority of those boys to withdraw a strong stimulus to work generally ?—Yes, I should think it did. It is rather hard to put oneself in their position, but I should rather think it did.

2263. (*Lord Lyttelton.*) Do you suppose many go with the intention of going to the university, and whose destinations are changed while at school ?—Yes, I think there are some, certainly.

2264. (*Mr. Twisleton.*) But in the last year they would be likely to know whether they were going to the university or not ?—Yes.

2265. Are there many boys who go, intending to offer themselves for Woolwich or for competitive examinations ?—Yes.

2266. And have those boys usually considered that they can best receive instruction direct from Rugby or from some private tutor ?—A good many go to some private tutor.

2267. It would be looked upon as hardly wise in a boy to begin simply from the Rugby training ?—I should think so.

2268. Do you think the Rugby training could be at all modified, so as to enable those boys to get what they want ?—It is, in some cases. They are excused some of their classical work.

2269. Do many boys avail themselves of that ?—Yes, I think a fair proportion.

2270. Do you think they do so in order to escape harder work and to take easier work, or that they do it fairly for the purpose they have in view ?—I think they do it *bonâ fide* generally.

2271. Have you ever cases of first-rate classical scholars not going to the university ?—One or two ; but very rare.

2272. (*Lord Lyttelton.*) Do you think there is a difference between common examinations and the Woolwich examinations ; could boys go direct from Rugby in many cases prepared for the others, but not prepared for Woolwich ?—I do not think they could.

2273. Not safely ?—No.

2274. (*Mr. Thompson.*) You said yourself that you left Rugby at Midsummer and came up to Cambridge in the following Michaelmas term, that is in October ? —Yes.

2275. Did you spend the intervening time with any private tutor ?—No ; doing nothing.

2276. It is not usual to spend the interval with a tutor?—Not that I know of.

2277. You consider the mathematics you get there are sufficient to start you at Cambridge ?—If one is intending to read mathematics at Cambridge, it perhaps might be wise to take a private tutor between.

2278. (*Lord Lyttelton.*) For matriculation ?—No, not for matriculation, except in cases of great ignorance of or incapacity for mathematics.

2279. (*Mr. Thompson.*) For the mathematics that a classical man, who wishes to obtain a medal, would get up ?—I should think there is enough taught at Rugby for that if continued at Cambridge.

2280. (*Lord Clarendon.*) How far in mathematics

RUGBY.

A. Sidgwick, Esq.

17 Dec. 1862.

did you go at Rugby?—I went as far as conic sections.

2281. Inclusive?—Yes.

2282. (*Mr. Thompson.*) Did you read any part of mechanics?—No.

2283. (*Lord Clarendon.*) Were the boys in general well grounded in arithmetic at Rugby?—I should think so.

2284. Mathematics do count in the places in the school work?—Yes, they do.

2285. Was there any natural science taught while you were there?—Yes.

2286. How long had that been established?—It was there when I went there.

2287. Did you attend?—No, I did not.

2288. Was it voluntary?—The alternative was to learn modern languages.

2289. (*Mr. Thompson.*) Was there any disposition to look with, I will not say contempt, but with indifference, on mathematical reading?—Yes, certainly.

2290. The point of honour was in no way involved in a boy's succeeding in mathematics as it was in classics?—No.

2291. In fact, classical excellence was the point aimed at?—Yes.

2292. Would you say that was the only thing that gave a boy any *éclat* in the eyes of his fellows?—The main thing.

2293. If a boy showed any aptitude for mathematics would that be appreciated?—To a certain extent.

2294. Would he be thought what boys call a "swell" in consequence?—To a certain extent he would, but to a much less extent than in classics.

2295. (*Lord Lyttelton.*) Was there any distinction between those who took up physical science and the rest. Do you suppose that those took it who had real talent for it, or was it thought an easier thing to do?—When I was there, it was certainly thought an easier thing; but I believe it is changed now. There was a change of master, and I believe that made a change in that respect.

2296. It is better taught, you think?—Yes.

2297. (*Mr. Vaughan.*) Do you happen to know whether, at the present moment, by far the greatest portion of students in physical science are not in the sixth form?—I do not know.

2298. (*Mr. Twisleton.*) Do you know why the boys do not look with the same respect on eminence in mathematics as in classics?—Because the rising in the school, and the obtaining of prizes, scholarships, and exhibitions, is mainly caused by classics.

2299. You think that was the only reason. It was not from any idea on their part of the advantage of one over the other?—No.

2300. (*Mr. Vaughan.*) Do you think it was the case that the Rugby men as a mass went to Oxford rather than to Cambridge, and that this may in part account for it?—No; because I do not think they did do so.

2301. (*Mr. Thompson.*) You would perhaps say the cause might be that they were able to appreciate classical excellence better than mathematical excellence?—Perhaps so.

2302. (*Lord Lyttelton.*) The mathematical prizes were substantial prizes, were they not?—Yes; but there were not many of them.

2303. Were they all books, or were there any money prizes?—They were all books.

2304. They were not valued nearly so much as the classical prizes?—I should think they were valued as much, but there were so few of them.

2305. I mean in the estimation of the school they did not confer such distinction?—No.

2306. (*Mr. Vaughan.*) Did the boys work harder at arithmetic and mathematics, who were not going to the university, but were going into practical life straight?—I do not think so.

2307. (*Lord Clarendon.*) Was there much time for private reading at Rugby?—Not very much.

2308. Therefore there was not a great deal?—There was a good deal in this way, that boys neglected their school work. I mean by the theory there was not much time for private reading.

2309. (*Mr. Thompson.*) Boys *made* the time, in fact?—Yes.

2310. (*Lord Clarendon.*) Private reading in general literature?—Yes.

2311. What sort of books; principally novels?—Principally novels, I should think.

2312. (*Sir S. Northcote.*) Much poetry?—History and poetry also.

2313. Can you mention any particular book of history?—They were the ordinary books, Macaulay's History of England, for example.

2314. Had a boy read Gibbon, for instance?—Some boys would.

2315. There would be several doing that?—Yes.

2316. (*Mr. Thompson.*) Hume and Smollett?—Some few, perhaps.

2317. (*Lord Lyttelton.*) Prescott, I suppose?—Yes.

2318. Shakspeare?—Yes, a few would.

2319. (*Sir S. Northcote.*) Would they have read Tennyson?—Yes.

2320. Byron?—Yes.

2321. Wordsworth at all?—I do not remember a case of Wordsworth.

2322. Not any of Pope or Dryden?—Not many, but some few might.

2323. Scott?—Yes.

2324. (*Mr. Thompson.*) You sometimes had essays to write on literary subjects, had you not?—Yes; English essays.

2325. And those essays required a certain research amongst English classical authors?—Yes.

2326. (*Sir S. Northcote.*) Did boys buy many books that were worth having?—Not much, I think.

2327. (*Mr. Vaughan.*) What was the style of book that was given in prizes in your time?—After Dr. Temple came there, every boy had his choice, and the sum was credited to him at the booksellers.

2328. He was compelled to take it out in books?—Yes. There was a list drawn out for all those below the sixth. There were about 250, from which they might choose.

2329. (*Lord Clarendon.*) Could he add any money of his own to the sum spent for him, in order to get a handsomer edition?—Yes.

2330. (*Sir S. Northcote.*) Was that ever done?—Yes.

2331. What sort of books did they usually choose?—They chose standard works, such as Gibbon, and Hume, and Macaulay's Essays.

2332. (*Mr. Vaughan.*) Ever Greek and Latin books?—Very seldom; but sometimes.

2333. For Greek and Latin prizes?—Yes.

2334. (*Sir S. Northcote.*) There was no system of giving leaving books, was there, among the boys?—No.

2335. (*Lord Clarendon.*) Was there a debating society?—Yes, there were two. It died out, and was started again twice, while I was there.

2336. Were you a member of it?—Of the second one I was.

2337. Were the debates carried on with spirit; was it popular?—Yes, at first; but it gradually fell into contempt and disuse.

2338. What from do you think?—From the interest flagging.

3339. (*Lord Devon.*) Boys who took an interest in it at first went away, I suppose?—Yes.

2340. (*Mr. Thompson.*) That is the case in societies of the same kind at the universities?—Yes.

2341. (*Sir S. Northcote.*) Was it a mere debating society, or were newspapers taken in, and something of the character of a club given to it?—It was merely a debating society.

2342. Did boys read many newspapers?—Yes.

2343. Where did they get them?—They were all taken in at the boarding houses.

2344. (*Lord Devon.*) Did the second debating

society thrive better?—No; about the same as the first.

2345. Did that die too?—Yes, and there has been one since, which has also died.

2346. (*Sir S. Northcote.*) Did boys read up much for the debates?—Yes, I think so.

2347. (*Lord Clarendon.*) How many hours a day should you say, taking one day with another, was the average hours of work at Rugby?—Do you mean compulsory work or actual work?

2348. Say actual work with a studious boy?—A studious boy would work generally the whole morning, and generally the whole evening, and on whole school days in the afternoon too from about three or four to six.

2349. You would say seven or eight hours a day would be taken up by his work?—Yes.

2350. (*Mr. Vaughan.*) Out of school?—Altogether; I am counting in school and out of school.

2351. (*Sir S. Northcote.*) Can you add up the number of hours to yourself; can you say the number of hours in the week?—I should say about 40.

2352. (*Mr. Vaughan.*) Including composition and including school times too?—Yes; perhaps a studious boy might work more than that.

2353. (*Mr. Thompson.*) You exclude Sunday?—Yes.

2354. That would be about six and a half hours a day?—Yes.

2355. (*Lord Clarendon.*) How much time in general should you say is given to play?—Generally the whole afternoon of a half-holiday, I should say.

2356. How many half-holidays are there in the week?—There are always three, and in about two weeks out of three there are four.

2357. And the whole afternoon, you would call that five hours?—Yes.

2358. Would you say 20 hours a week were given to play?—I should say quite that.

2359. During the cricket season, how many hours was it necessary to play at cricket to keep yourself well up?—I am afraid I cannot say. I was not a cricketer.

2360. With the exception of what you were alluding to just now, respecting too much original composition, and the change that you think should be made in that respect in favour of the translation from English into Latin, is there any other change which it occurs to you would be for the benefit of the school?—I think more attention might be paid to Greek prose composition.

2361. Do you mean original composition?—No, translation.

2362. (*Mr. Thompson.*) Translation from English into Greek prose?—Yes.

2363. (*Lord Lyttelton.*) Do you think there is enough translation from Greek and Latin into English?—I think so.

2364. Would you have more or less repetition at Rugby?—I do not think it need be altered.

2365. In fact these are the only two changes which you think would be advantageous, the translating more into both Latin and Greek from English?—Yes, and altering the modern languages.

2366. Did that occur to you at the time when you were at Rugby, that you were doing too much original composition, or have you found since you left Rugby a want of facility in translating which you might have acquired there?—It occurred to me at the time.

2367. That then was some waste of time?—Yes.

2368. (*Mr. Twisleton.*) Was your obtaining a prize for Latin prose not likely to be the result of your composing very much?—I do not think so.

2369. You think if you had had the translating into Latin prose you would have been just as likely to obtain a prize?—I think so.

2370. (*Sir S. Northcote.*) Do you think boys take more interest in original compositions than in translations?—The majority, I should say, certainly not.

2371. (*Mr. Thompson.*) Not even in verse?—No.

2372. (*Mr. Twisleton.*) It is a much better plan for learning a language, is it not, to have frequent translations into the prose of the language?—Yes.

2373. (*Sir S. Northcote.*) Which strikes you as the more difficult, translating English verse into Latin verse, or writing original Latin verse?—Writing original Latin verse.

2374. (*Mr. Twisleton.*) Then in regard to Latin prose, which is the most difficult, writing original Latin prose, or translating English into Latin prose?—It is much more difficult to write satisfactory Latin prose.

2375. (*Mr. Vaughan.*) In the case of original composition, are not two distinct efforts of the mind necessary: invention, to produce and arrange ideas; and afterwards or concurrently the expression of these in language?—Yes.

2376. Suppose, therefore, that the work is properly done in both cases, there is an additional effort of mind required in original composition, and that makes it more difficult?—Yes.

2377. (*Mr. Twisleton.*) And with regard to the average, as a matter of fact, and the way in which Latin prose is written usually, which is preferred?—I daresay they could do the original quicker, and therefore would prefer it.

2378. Do you think that with boys who have not much imagination and much original power, the fact of being compelled to learn the language in writing original composition prevents their learning it as effectually as they would if they simply had the effort of translation to overcome?—I think it is quite possible.

2379. (*Sir S. Northcote.*) Is there not a double operation in the translation of English verse into Latin verse, that you have first thoroughly to appreciate the English author, and then you have to adapt his ideas to the style of thinking of a Latin author?—In most cases the appreciation of the English is a very speedy operation.

2380. (*Mr. Vaughan.*) What was the kind of subject, we will say in the upper parts of the school, which you had to write upon at Rugby for an original essay?—Historical, literary, and sometimes metaphysical subjects.

2381. (*Sir S. Northcote.*) Have you any ideas given for that?—No.

2382. You would merely have the subject given?—Yes.

2383. (*Mr. Vaughan.*) Did it ever strike you that the subjects were rather above the boys?—Yes; I thought so.

2384. Do you think the boys could have supplied ideas, could have combined their ideas, and arranged them better, if they had had humbler topics, and more within their experience to write upon?—I do not know, I am sure; they might have done.

2385. (*Mr. Thompson.*) Trite topics do not generally excite much enthusiasm in school boys?—No.

2386. (*Mr. Twisleton.*) I do not understand you that you would dispense altogether with the original Latin composition?—No.

2387. It is merely as a matter of degree you think it better there should be more translation from English into Latin?—Yes; there being one a week regularly in the sixth.

2388. Have you considered what proportion would be desirable. Once in three weeks?—Certainly; not oftener than that.

2389. You think if for two weeks there were translations from English into Latin, and in the third week original compositions in Latin, the boys would not write Latin less well, but they might, perhaps, even write it better?—Yes.

2390. (*Sir S. Northcote.*) I have observed that a great many boys from different schools have given the same answer with respect to original composition, and expressed a wish that there should be more translation. Do you think that arises from the fact that translations are of more value in scholarship examinations at the universities than original compositions, or from a sense on the part of the boys that the

RUGBY.

A. Sidgwick, Esq.

17 Dec. 1862.

one is really more valuable than the other?—I think partly from the reason that it is more valuable in scholarships, and partly from the recollections of the utter miseries of original composition.

2391. The actual paying value of the power of translation is very considerable, is it not, at the universities?—It is, I should think.

2392. (*Lord Clarendon.*) The masters were on very good terms with each other, and with the boys, I believe?—Yes.

2393. There was a friendly relation between them?—Yes.

2394. As if the whole thing was a joint stock company, and success the object of all?—I should say so.

2395. Looking back at the system established at Rugby, from your experience would you think that the system was one well calculated to get all that could be got into the boys?—I think so.

2396. (*Lord Lyttelton.*) Did the upper boys communicate constantly and freely with the Head Master out of school?—Whenever they wished.

2397. Did he go among them out of school in the games, or at other times?—Yes.

2398. Did he ask them to his house in the evening?—Yes.

2399. You think that the personal influence of the Head Master was perceptible?—Yes; when I speak of the Head Master I mean Dr. Temple.

RUGBY.

ANALYSIS OF THE EVIDENCE.

[*** The Names of the Witnesses are in Alphabetical Order. The Figures refer to the Numbers of the Questions in the Minutes of Evidence.]

ARNOLD, Rev. C. T., page 275.

Has been an Assistant Master at Rugby since 1841, 21 years, and is a teacher of classics in the lower Fifth Form, having also for one year, as a matter of convenience, taught modern languages, both French and German; 1160–1164. Asked whether he can suggest any improvements beyond what has been stated by Dr. Temple, as the mouthpiece of all the Masters, the witness thinks improvement is to be sought less in great changes than in details, and by having more Masters; the School is shorthanded; examination on this point pursued; 1165–1177. Has 50 private pupils, Foundationers and non-Foundationers; 1180. A Foundationer, as a Foundationer, would not be thought meanly of by a non-Foundationer; a boy might be looked down upon from some personal disqualification or the station of his father, but this feeling prevails more between the Foundationers themselves than between the Foundationers and non-Foundationers; the feeling between the two classes which prevailed 20 years ago is very much altered, owing probably to the fact of many Foundationers having been at the school eminent for ability and in a good social position; 1181–1183. Thinks it would be better to perfect the present system at Rugby than introduce any radical changes into it; 1184. Has stated in a letter that he has seen a good deal of German tuition and greatly prefers the English; has seen the schools at Frankfort and at Heidelberg, and other German schools are the same; they have no games, the boys walk out, they have a professor of gymnastics, they learn to swim, but he has no hesitation in saying that public school life is far more healthy and vigorous, and tends to the formation of a far more manly character here than abroad; the teaching in Germany is extremely abstract; there are boys in Germany who, if examined about the subjunctive mood and Greek particles, display an astounding amount of knowledge, but if put to construe a passage cannot do it with half the life an English boy would display; their composition is not so good as in English schools he never saw any of their Latin verse; 1185–1200. Opinions as to the age and order of learning Greek, Latin, French, and German; 1201–1208. Pronunciation of the two latter languages: boys who learn modern languages in the nursery have a very great advantage; does not know of boys who began to learn French here and who could pronounce it before they left; but he has known boys who, having learned French and German entirely at Rugby, were able, after a residence of a few weeks in France and Germany, to read and speak the languages fluently; 1209–1213. Dr. Arnold introduced the modern language department into Rugby; French was taught before his time, but he made it compulsory, as part of the form work; 1214–1216. Is satisfied with the way in which modern language and modern literature are cultivated in connexion with this school; would not suggest any further improvement; 1217, 1218. In the German schools considerable attention is paid to foreign languages, particularly English and French; they are quite a part of their *curriculum*; 1219–1221. The relation of the private tutor to his pupil is generally one of a confidential character; if the boy got into a scrape he would consult his tutor; the relation is closer if the tutor is also his boarding master; 1222-1228.

ANSTEY, Rev. CHARLES ALLEYNE, M.A. The Rev. HENRY JAMES BUCKOLL, M.A., examined at the same time, page 273.

The practice of the Head Master in consulting the Assistant Masters did not exist in Dr. Wooll's time; on occasions of disturbance Dr. Wooll would call a meeting of the Masters and take their opinion, but there were no periodical meetings; he did not usually consult them relating to alterations in the school system; 1105–1110. Very soon after Dr. Arnold came he invited the Masters occasionally to dinner, when they talked over the state of the school; besides which they had meetings every three weeks, and a quarter of an hour every morning before the second lesson; Dr. Tait and Dr. Goulburn continued the same system; they all used to meet on the "third "week half-holiday;" the meetings dropped off a good deal in Dr. Goulburn's time; at these meetings everything connected with the management or alteration of the School was brought forward, and each master was asked his opinion; the consequence was a very harmonious working of the school; 1111–1120. At one of these meetings recently, Dr. Temple communicated with the other Masters, and his letter, now before the Commissioners, is in fact a joint production, Dr. Temple being spokesman of all the Masters; 1121–1123. Approves of the position, powers, and responsibilities of the Sixth Form, which is rather a distinctive feature of the School; of course there are evils connected with it, as the power may be abused, but there is an appeal from the authority of the Sixth Form to the Head Master, which keeps it in tolerable check; has known the power to be abused, but not in the present Master's time; the authority of the Sixth Form has been in force ever since he first knew the School, with the modifications which the different forms required; in Dr. Wooll's time the Fifth, there being no "twenty" at the time, was the only form exempt from personal fagging, now the "twenty" and two Fifths are exempt; when the rebellion broke out in Dr. Wooll's time, it was entirely on a point of discipline connected with the Sixth Form; that rebellion injured the School materially; in Dr. Wooll's time the authority of the Sixth Form was of great advantage in lessening bullying by the big boys; allowing the Sixth Form to settle little matters, often of a school-boy character, without the interferenee of the Master, was reasonable and advantageous; it is incorrect to say that in Dr. Wooll's time the boys did not say their prayers at night; they did so, and were protected by the Sixth Form; in former times fowl-stealing was a common occurrence, but the Sixth Form found it out; the power of the Sixth Form, as it is now, existed about the time of Dr. Arnold; he legalized punishment by the Sixth which had before only been tolerated; the authority of the Sixth Form is of great importance in keeping up the intellectual character of the School; 1124–1135, and 1143, 1144. A modification has been introduced into the power of the Sixth Form, to prevent abuse of it; the right of appeal has been introduced; when Dr. Tait was ill for a whole half, the matter was brought under the consideration of the Assistant Masters; the Sixth Form contended that there was no appeal from their power; the Masters had several meetings, and decided that there must be an appeal; any boy can now appeal to the Master before any punishment is inflicted by the Sixth; he can now arrest the Sixth boy's arm in the act of punishing, and appeal to the Sixth in full number or to the Head Master; 1136–1142. The boys breakfast, dine, and sup, in the hall: the Master occasionally dines with them; it is a rare thing to hear complaints as to the diet; 1145–1149. Except in a few cases, the Foundationers are not in the houses; in teaching and in the games, not the slightest difference is recognized by the Masters between the Foundationers and the non-Foundationers; all the boys are on a perfect equality; some of the town boys of humble parentage do not join with the others, but it is their own doing; when their conduct and habits are good and respectable they are not avoided by the rest of the boys; there have been more than a dozen tradesmen's sons in the school; more on this subject; 1150–1156. The question of erecting a secondary or inferior school at Rugby has been considered; but so many difficulties were found in the way that the project was abandoned; 1157. Sunday intercourse between the Masters of the boarding houses and the boys; religious lectures on Sunday evenings, 1158.

BUCKOLL, the Rev. HENRY JAMES, M.A. (*See* Evidence of Anstey, the Rev. C.A., M.A., page 273.)

EVANS, the Rev. CHARLES, M.A., page 277.

His answer to the printed questions, to the effect that many of the Rugby boys leave school at 17 or 18 years of age very imperfectly educated in classics, applies to at least half the boys; the last year or two at Rugby is, in their case, intellectually unprofitable; thinks the system of "bifurcation," or distinct departments, might make this period more serviceable to the boys; in new schools this would be more practicable than in old ones, but even at Rugby does not consider the difficulties insurmountable, and thinks the experiment worth a trial; he would begin with the formation of a Woolwich class, into which no boy should be admitted who had not reached the Fifth Form, and then only at the desire of the boy and sanctioned by the parents; he would have the Sixth Form in this new class rank exactly on a level with the classical Sixth Form; the boys having acquired a solid groundwork in Latin

RUGBY.

EVANS, the Rev. CHARLES—*cont.*

and Greek might then be permitted to drop a portion of their classical work, say versification and Greek, and devote the time thus gained to mathematics principally, to physical science, history, and modern languages, care being taken, of course, to guard against superficial smattering; this would meet what seems to be the requirement of the age, and what parents desire but do not know how to achieve; he would keep up sufficient Latin to ensure a gentlemanlike and familiar acquaintance with a few good Latin authors, say Horace and Virgil, or Horace and parts of Cicero, committing a great portion of them to memory; beginning his scheme *de novo*, and not grafting it on an old institution, he would give the same education to all boys up to 14 or 15, consisting of classics, the elements of mathematics, and French; 1229–1263. A boy recommended to go into this subsidiary class would not feel a sense of shame or inferiority, or degradation, if the scheme were well started; witness would drop Greek, unless for particular reasons it were desirable for a boy to continue it, and then he should have the opportunity; suppose a boy intended to go to Cambridge, and he had a decided turn for mathematics, but none for classics, witness would try to make the new department so good that it would be worth the while of such a boy to enter it; the classics that he would get there would be sufficient to qualify him for passing the "little go;" admitting the difficulties which stand in the way, he still thinks that under a wise master they might be overcome; 1264–1272. The boys of whom he had spoken get through the mechanical part of their work exceedingly well, but as soon as they were called on to comprehend the finer parts of scholarship they slacken; believes he could pick out 200 boys at this moment, who would be better for the new department; 1273–1282. Objects to suggested substitutes for his scheme; 1283–1301. Analogy between the proposed scheme and the Cambridge system; 1302–1305. With plenty of convenience, and a master mind in the school, his scheme could be carried out; 1305. Thinks it would not be necessary to divert some of the exhibitions to a fresh destination if his scheme were adopted, as he finds boys willing to enter such a department as affording a better training for practical life at an early age; 1306–1309.

HEFFORD, MR. GEORGE VALENTINE, page 241. (*See* Evidence of DR. TEMPLE, page 241.)

MAYOR, the REV. R. B., a Mathematical Master at Rugby (JOHN WILSON, ESQ., examined with him); page 280.

(*Mr. Mayor*:—Has been a mathematical Master at Rugby 17 years; 1310, 1311. Speaks of the part he takes in teaching; 1312–1315. Considering the number of subjects taught at Rugby, the boys could not devote longer time to mathematics; the time is 3 or 3½ hours a week; 1316–1318. (*Mr. Wilson*:—Is a mathematical Master as well as teacher of physical science; took his degrees in 1854; 1319, 1320. Some of the boys become well acquainted with the elementary mathematics; they do not get to its application in a difficult subject; they reach elementary hydrostatics and popular astronomy; the highest mathematical degree taken in his time by a Rugby man was fourth wrangler, that was three years ago; 1319–1325. (*Mr. Mayor*:—The capacities of boys vary very much in mathematics; the proportion of pupils who are capable of understanding the differential calculus varies much at different times; at present there are only two; has had three or four times as many; as a rule the strongest in classics are the strongest in mathematics; the Rugby boys do very little in mixed mathematics, but boys who do well in one case generally do well in the other; has noticed that a few boys who were rather elegant composers than sound scholars had been incapable in mathematics, but the boy who sees through hard constructions generally does well in mathematics; 1326–1330. A boy in the lower part of the school is altogether in the hands of the writing Master; on passing out of that he is with the mathematical Master two hours a week at least; school details; is not satisfied with the arithmetic of the school; there is not time to do it well; the boys generally come to school badly prepared; 1333–1342. An average boy leaving the school at 18 will have gone through arithmetic, algebra to the end of progression, and the first four books of Euclid, without extra tuition, 1343, 1344. Extent of private mathematical tuition; three hours a week and preparation, besides from work; with this extra tuition boys cannot get so high as conic sections, and keep up a knowledge of lower subjects, 1345–1348. Latterly the boys who go to Oxford from Rugby do not take double honours; 1349. Thinks it quite practicable for boys in the upper parts of the School to be put into a separate kind of school; sees no insurmountable obstacle to this, even in an old established School like Rugby; there would be difficulties, of course; idle and incapable boys would wish to enter this modern school to get rid of Latin composition and Greek; to counteract this, he would make a rigid rule, that the boys in that division who would not work should leave; he would begin the new school with the highest and most eminent boys, if they showed a decided turn for mathematics, or if from some other reasons classics were of less importance to them than mathematics or modern languages; 1350–1354. (*Mr. Wilson*:—Has considered this question a great deal, from seeing so very many boys at Rugby on whom a classical education produced but a very small effect; it is matter of opinion, of course, what amount they have gained; but he thinks that if a modern school were established here, so great is the pressure for the army, that half the boys would be in the modern school in a couple of years; has at this moment 26 pupils, ten of whom are for Woolwich, and all of them will be obliged to leave Rugby, because they cannot go hence to Woolwich; with the second school they could all remain at Rugby; 1355, 1356.

MAYOR, the Rev. R.B.—*cont.*

SIDGWICK, ARTHUR, ESQ., page 296.

Was six years at Rugby; left it in the summer of 1859, and in October term following went to Trinity College, Cambridge, where he is still; 1972–1975. The duties of the monitors at Rugby are generally to look after the morality of the School, to prevent offences, and to keep order in the houses; the monitors prevent, as far as they can, drinking, gambling, and bad language; the duties are fairly performed, and the authority of the monitor is cheerfully acknowledged and also supported by public opinion; 1976–1981. Thinks the monitorial power inspires the Sixth Form with a sense of responsibility, and that in most cases they use it properly; by exercising his power a monitor does not make himself unpopular; 1982–1984. Monitorial punishments: impositions and caning on the back; 1985–1987. No limit to the length of the impositions, except on appeal to the Master of the boarding house or the Head Master; has known a few instances of appeal; appeals are not encouraged; the Master generally upholds the authority of the monitors; the ordinary length of an imposition is 300 lines of writing out; it is sometimes double in case of contumacy; at others it is as low as 50; 1985–1997. Any kind of writing is taken; this has a tendency to deteriorate the handwriting; still he does not think it has actually had that effect at Rugby; 1998–2002. There were a few cases of drinking when he was at Rugby; the practice was opposed to the public opinion of the School; 2003–2007. There was little bullying at Rugby in public; was a town boy, and therefore ignorant of what took place in the boarding houses; 2008, 2009. As a town boy, was on perfect equality with the boarders; so were all the town boys, with the exception of the sons of the Rugby tradesmen, about 20 in number when he left; they were clearly at a social disadvantage; they formed a set by themselves; they were not bullied. (*Mr. Thompson*:—Were they cut?) They appeared to keep to themselves; 2010–2020. His family resided at Rugby; went there on purpose that he might have the advantage of the School; 2021, 2022. The town boys were subject to fagging, as well as the boarders; any member of the Sixth Form had power to fag; 2023, 2024. Town boys took all their meals at home; none of them were day boarders; some of them were permanently in the boarding houses, 2025–2032. Home influences may be of a favourable or a deteriorating kind, but, on the whole, thinks a boy likely to get more advantage from being permanently in the boarding houses than from being merely a day pupil; 2033–2038. Took his share in the games as if he had been in the boarding house; was not one of the "eleven;" 2039, 2040. Home boarders went to chapel on Sundays with the rest, and passed the day like the rest of the boys, except that they were at home in the evening; the afternoon frequently spent in walking; was in as good a position to form friendships with boys in the boarding houses as if he had been in one himself; the sermons by the Head Master were attractive to the boys; was there in Dr. Goulburn's time and in Dr. Temple's; 2041–2053, and 2057–2060. Dr. Temple used to prepare the boys for confirmation, town boys and boarders; both attended the sacrament; 2054–2056. Private classical tuition, details of it; some tutors very superior, and the boys felt the advantage; others inferior, and the boys unfortunately placed under them would probably not be sorry to see the tutorial system altered or abolished altogether; 2061–2081 and 2099, 2100. Tutors, how chosen; the Foundationers could have as good tutors as the other boys; the parent had the choice; more details, 2082–2093. Intimate friendly relations often established between the tutor and pupil of great benefit to the pupil; 2094–2098. Tutors for Foundation boys paid by the parents, as much as for the boarders; the parents had also to pay another sum unless they had resided two years in the neighbourhood; the total expense of a Foundationer was 10 guineas to the classical tutor, 10 guineas to the mathematical tutor (if any), and small fees amounting to about 1*l.* a year; 2101–2106. There were about 72 town boys, including the sons of tradesmen; saw little manifestation of home influences among them to distinguish them from the rest of the boys; 2107–2111. Foundationers living at home were of course exempt from the house fagging; after locking-up hours they were supposed to be kept at home, but the rule was frequently broken, and mischief resulted, the fault being probably more that of the parent or friend than the boy; there was a school official, a kind of proctor, to walk about the town and look after them; 2112–2120. The tutor would often read other than school work; read Greek plays with his tutor; generally, the school work was sufficient to take up a boy's time; 2121-2127. Emulation, interest in the progress and success of the scholars, and prizes the principal stimulants to work at Rugby; holidays given for the success of Rugby boys at the Universities; 2128–2138. Does not think the Foundationers begin classics earlier than other boys; they

SIDGWICK, ARTHUR, Esq.—*cont.*

are about as forward, age for age, as the non-Foundationers, and, number against number, hold their own, and do as well in the Universities as the rest of the School; 2139–2145. The Foundationers compete for the scholarships at the top of the School, and often successfully; 2146–2149. The Foundationers, on an average, rather weaker, because rather younger, than the boarders, 2150–2151. Their living at home made no discernible difference in their reading or scholarship; 2152–2154. The stimulants to work are very effective at Rugby; 2155–2158. Generally speaking, the Rugby boys have read more Latin and Greek when they come up to the University than boys from other schools, more than boys from any other school, except perhaps the Eton collegers, and except perhaps some Shrewsbury boys; details of Rugby classical reading; 2159–2168. The time devoted to Latin prose composition at Rugby is quite sufficient, perhaps in excess; prefers translation to original composition; 2169–2173. English verse prizes; 2174–2176. Obtained college prizes for Latin elegiacs, Latin declamation, and an English essay, and University prizes for a Latin essay and two Greek odes; 2177–2180. Does not remember any other Rugbeian obtaining prizes during the same year, or any prize of late, except a Newdegate prize, five years ago; 2181–2187. Special Master for composition; details; 2188–2203. If there were a class at Rugby like that of the Eton and Winchester College boys, it might be an additional stimulus to the best boys, but it would probably diminish the average; has not known any case in which the recent opening of the scholarships at Eton and Winchester has prevented boys from coming to Rugby; but such a thing is likely to happen; 2204–2207. The Rugby system is less beneficial to the best boys than to others; less encouragement given than to the best collegers at Eton; a boy can be idle at Rugby, though well looked after by the Masters; 2208–2217. It is a standing rule at Rugby that at given ages a boy must be in particular parts of the School, or leave; but this is sometimes departed from; the rule, if strictly acted upon, would, to a certain extent, prevent idleness by removing the idler; but in the case of boys of excellent character, though slow of understanding, the rule is properly held in abeyance; 2218-2227. Paid little attention to modern languages; the boys had to learn either German or French, but the thing was not well managed, especially in the Sixth Form, for the lessons followed close on the classics, without an interval; the arrangements in the other parts of the school were better; modern languages not taken up heartily by the boys, but some stimulus has been given to them lately; when he left Rugby could not read a common French work without a copious use of the dictionary; he knew more of German; a boy aiming at classical prizes would deem it a waste of time to give much attention to modern languages; the boy who worked in classics worked also in modern languages more than the boy who was idle in classics; is not keeping up either his French or his German; 2228–2257. The general feeling of the boys is that the studies at the Universities determine very much the status of the School; the consciousness of not being intended for the Universities acts on the majority of boys as a withdrawal of a strong stimulus to work; some boys go to Rugby with the intention of proceeding to the University, whose destinies are changed while at School; in the last year they would be likely to know whether they were going to the University or not; many go intending to offer themselves for Woolwich or for competitive examinations; the Rugby training is modified to enable such boys to get what they want; they are excused some of their classical work; a fair proportion of boys avail themselves of this, *bonâ fide* generally, and not in order to escape the harder work; cases of first-rate classical scholars not going to the University are rare, 2260–2276. Left Rugby at Midsummer and went to Cambridge at Michaelmas; spent the interval in doing nothing; if one intended to read mathematics at Cambridge it might be wise to take a private tutor during that time, but not for the matriculation except in cases of great ignorance or incapacity in mathematics; for the mathematics that a classical man wishing to obtain a medal would get up, enough is taught at Rugby if continued at Cambridge, 2274–2279. Went as far in mathematics as conic sections; did not read mechanics; Rugby boys are well grounded in arithmetic; mathematics count in School work, 2280–2284. Natural science taught at Rugby; it is compulsory with the alternative, however, of modern languages, 2285–2288. Mathematics used to be regarded with some indifference; an aptitude for mathematics would be appreciated, but classical eminence was the chief point aimed at, 2259–2294. Reasons for preference of classics to mathematics; rising in school, and obtaining prizes, scholarships, and exhibitions, are mainly owing to classics; the mathematical prizes were books, but there were few of them, 2298–2306. Physical science touched on, 2295–2297. Private reading in general literature, novels, history, poetry, 2307–2323. The English essays on literary subjects require a certain research amongst English classical authors, 2324–2326. Prizes in Dr. Temple's time; boys selected their own from a list; standard works, such as *Gibbon* and *Hume*, and *Macaulay's* Essays, rarely Greek or Latin, 2327–2333. No system of "leaving" books at Rugby, 2334. Debating societies; the first died out, a second was started with the same fate, so with a third; boys at first read up for the debates, which were carried on with spirit; 2335–2346. About 40 hours a week given to work; 20 to play, 2347–2359. Asked for further suggestions as to

SIDGWICK ARTHUR, Esq.—*cont.*

improvement of the School, thinks more attention might be paid to Greek prose composition, in the shape, not of original composition but of translation from English; reasons for preferring translation; the subject pursued at length, 2360–2379. Subjects of original essays: historical, literary, and metaphysical, 2380–2385. Would not dispense altogether with original Latin composition; would have translations two weeks and original composition in the third; 2386–2389. Thinks the general feeling in favour of more translation and less original composition arises partly from the fact that translation is more valuable in scholarships, and partly from the recollection of the utter miseries of original composition; 2390–2391. The Masters at Rugby were on good terms with each other and with the boys; there was a friendly relation between them, as if the whole thing was a joint stock company, and success the object of all, 2392–2395. The upper boys communicated constantly and freely with the Head Master out of School; the Head Master was with the boys in their games and asked them to his house in the evening; his personal influence was perceptible; he spoke of Dr. Temple; 2396–2399. Looking back at the system established at Rugby, he thinks it calculated to get into the boys all they can receive; 2395.

SMITH, the REV. BOWDLER (G. VECQUERAY, ESQ., examined with him), page 283.

Is Foreign Language Master at Rugby, and Assistant Classical Master in a very slight degree; his classical work consisting in superintending the private tuition of the junior boys in his own house as house Master; has been at Rugby since February 1852; 1415, 1416. (*Mr. Vecqueray*:—Has been French and German Master at Rugby since 1859; 1417–1419. (*Mr. Smith*:—Was at Rugby, and was on the continent four or five years as a boy, both in France and Germany; the boys have two lessons of an hour each in modern languages every week, independent of preparation and private tuition; is private tutor, but Mr. Vecqueray takes the conversation classes; 1420–1432. (*Mr. Vecqueray*:—These classes established in his time; in fact, they were the chief object of his nomination as additional modern language Master; the class is generally attended by eight of the more proficient boys, to whom it is a real object to obtain a wider familiarity with French and German; admission to the conversation class is a matter of privilege, to be obtained by high position in the School, or by good extra work; the manner of conducting the class depends on the proficiency of the boys; this half there are eight boys really well up in French; there are exercises besides those done in the School, as well as reading a French author without translating, when he merely stops the reading, here and there, to ask questions either as to an unusual word, or a difficult construction, the questions and answers both being entirely in French; the class meet for an hour twice a week, independently of schoolwork; 1433–1445. (*Mr. Smith*:—The time is taken from the games. (*Mr. Vecqueray*:—That explains the smallness of the number; if the time were taken from other schoolwork, the number would soon become eight times eight; in this conversation class, the pronunciation is specially attended to; the boys are not so well up in German as in French; some of the better scholars can construe correct German sentences; they would not be able to turn a historical book, say Lord Stanhope's Life of Pitt, into reasonably good German, but they would into French; not many would be able, on going abroad, to speak French fluently, unless they had been in his conversation class; 1446–1465. The boys are perfectly manageable; there is no difficulty about discipline, not the least; 1466, 1467. French taught in the Lower School, German in the higher; the boys become well grounded in grammar and knowledge of the language, and, if they desire it, would be able to read a French newspaper; they leave with a tolerably good accent, however bad it may have been on their arrival. With regard to pronunciation, it is important that a boy should begin a foreign language at an early age; 1468–1479. (*Mr. Smith*:—Some parents are anxious that their children should acquire modern languages; the majority begrudge the time taken from the classics; 1480, 1481. Asked if they could suggest anything by which the study of modern languages could be promoted, both witnesses suggest, though they do not see how to get it, an extra hour a week for modern languages; 1482. Both are of opinion that the prizes are ample; 1483, 1484. As to teaching modern languages philologically; 1485, 1486. A boy clever in learning one language is not always equally clever at another; 1487–1489. Thinks foreign languages are taught in England better than English and French in Prussia, or English and German in France; 1490–1493. The same marks being given for modern languages as for classics, taking time into consideration, acts as an encouragement to the study of modern languages; 1494–1496. Examinations; 1497, *et seq.*

TEMPLE, the REV. FREDERICK, D.D., page 241.

Has been Head Master of Rugby School since the beginning of 1858, succeeding Dr. Goulburn; 1–3. With regard to the property and revenues of the School cannot speak with authority; questions had been answered already by Mr. Harris, the Solicitor to the Trustees, and Mr. Hefford, his clerk, is in attendance to give further information on that subject; 3–4.

RUGBY.

TEMPLE, the Rev. FREDERICK—*cont.*

(*Mr. George Valentine Hefford* is accordingly examined: Is clerk to Mr. Harris, Solicitor to the Trustees, and was Assistant to the late clerk for 20 years; a surveyor is appointed to watch over the estates in Middlesex, and see that the lessees duly perform the covenants of their leases; he is paid by the Trustees 20*l.* a year, but has fees for special investigations and reports allowed by the Trustees; the rents of the Middlesex estates are paid to receivers appointed under 17 George III. c. 71, who give security to the Trustees to the amount of 4,000*l.* in the joint and several bond of themselves and surety; 5–9. The rents of the Warwickshire estates are received by himself, as clerk to Mr. Harris, who gives a like security; 10–12. The Surveyor inspects all works in progress and sees that proper materials are used and that the work is well done, also examines all bills before payment by the clerk; the system is found to work well; 13. The fines taken on leases of a portion of the Middlesex estates, under the 54 George III. c. 131, were applied, under the same statute, to the erection of the School chapel, in payment of 911*l.* 11*s.* 9*d.* owing for the purchase of houses adjoining the School, and for the building of almshouses; none have been taken since 1821; 14–17. There will be an increase of 800*l.* a year in the annual income of the Middlesex estates, consequent on the falling in of the leases granted in 1821; still there will be a depreciation of the property in 1881, and the Trustees have ordered the formation of a reserve fund to reinstate the buildings; the annual income of the property in 1853 may be assumed at 5,577*l.*, plus that 800*l.*; 18–40. Application of the receipts; partly explains the capitation fees, payable to the Head Masters and Assistant Masters, under 17 George I. c. 71, and two orders of the Court of Chancery made in 1808 and 1823, and promises further explanation next day, 41–60. In Answers it is stated that under the 7 George IV. c. 28, the Trustees are empowered to establish endowments or stipends in the nature of fellowships for life or a less period, of from 100*l.* to 300*l.* each, for the benefit of ushers who may have served ten years, and Head Masters who may have been removed or retired; and it is also stated that two Fellows receive 200*l.* a year each, but the Trustees have passed a resolution that no appointments to fellowships will be made in future, except in special cases; that resolution cannot bind the Trustees, who, under the Act of Parliament, have power to appoint any number of Fellows they like. (*Dr. Temple*—always understood this resolution as a notice by the Trustees of what they meant to do, not as binding them, or as settling a legal right. (*Mr. Hefford*:—The present fellowships are held by Mr. Bonamy Price, and the Rev. W. Bird, who have 200*l.* a year each, and Mr. Highton (Principal of Cheltenham College), Rev. P. W. Powlet, and Mr. Anstey (the Second Master), who have 100*l.* a year each; the Trustees appointed to these fellowships for length of service; Mr. Anstey's is the only instance of a fellowship being conferred on one in the receipt of an income from the school; he was there as long back as the time of Dr. Wooll; in passing that resolution, the Trustees were of opinion that the reasons stated in the Act of Parliament (want of inducement to ushers to come to the school and remain) no longer existed, and that therefore appointments to fellowships should be limited to special cases; the fellowships are not exactly a superannuation allowance, but in the event of an usher, in the midst of his work, becoming permanently incapacitated, from illness or other causes, the Trustees might wish to make the appointment; 61–78, and 523. Subject re-opened and table put in; 503–513. Disbursement for income tax on two of the fellowships; 514–522. (*Dr. Temple*:—No duties are attached to the fellowships not held by existing ushers. (*Mr. Hefford*:—The duties now performed by Mr. Anstey have no relation to his fellowship. (*Mr. Temple.*—Considers the continuance of these fellowships practically valuable to the interests of the school only in very extreme cases, such as when a superannuated allowance became necessary; prefers not giving an opinion upon hypothetical cases; would judge of each case when it arose; the subject pursued; 79–91. (*Mr. Hefford*:—In the Act of Parliament empowering the Trustees to send eight exhibitioners for seven years no qualifications are specified; it is left to the discretion of the Masters; 92, 93. Before the order of the Court of Chancery, empowering the Trustees to pay 3*l.* 13*s.* 6*d.* for the instruction of the Foundationers in mathematics and modern languages, the Trustees paid the fees for 20 years without authority; the payment began in Dr. Arnold's time, 99–107. A French Master was appointed in 1780, a M. Mather, and a French Master was appointed from time to time afterwards, but instruction in modern languages was not given before Dr. Arnold's time; it was in his time, and concurrently with the provision for mathematics, that a fee was first paid for the Foundationers for modern languages; the foundationers had previously received gratuitous instruction in French, but Dr. Arnold added the instruction in modern languages as part of the general school work; it is expressly stated in the Act of George III. what branches of learning the Foundationers shall be instructed in gratuitously, and neither modern languages nor mathematics is among them; 108–120. By the same order of the Court of Chancery, a salary of 20*l.* was provided for the drawing Master; this was for the instruction of the Foundationers; but the Head Master would augment this salary by fees for the instruction of the non-Foundationers; 121–124. By an

TEMPLE, the Rev. FREDERICK—*cont.*

order of the Charity Commissioners, dated 1859, the Masters are empowered to erect a Natural Science School, to pay 3*l.* 13*s.* 6*d.* for the instruction of each foundationer in mathematics, modern languages, and the natural sciences, in lieu of the 3*l.* 13*s.* 6*d.* previously allowed for mathematics and modern languages only; before that time there was a Natural Science Master, and he was paid by fees from all the boys alike; but at this time a change was made, and the instruction was provided for the Foundationers gratuitously; at the same time provision was made for increased instruction in mathematics in the appointment of a mathematical Master on the Foundation at 120 a year; 125–132. (*Dr. Temple*:—The Government of the School is vested in 12 Trustees; but the Head Master, with their sanction, exercises power over the whole School; the working of the system depends wholly on a thoroughly good understanding between the Trustees and the Head Master; believes the Trustees did not enter into a written understanding with Dr. Arnold as to the discretion he was to have; 133–135. An answer stating, however, that the Trustees occasionally, but chiefly on the Master's recommendation, make rules, &c., witness is asked to explain the "chiefly;" they never in his time made such rules without his recommendation. (*Mr. Hefford*:—This refers to a former time; remembers an instance; Dr. Arnold suggested that a place of solitary confinement should be provided as a punishment, and the Trustees did not approve of it; such rules were generally reduced to writing, but there were so few of them that he did not know where to put his hand on any; there was one altering the number of subjects to be examined from at the exhibitions; that was made on the recommendation of the Head Master, and it appeared in the form of a minute of a meeting; 136–140, and 188, 189. (*Dr. Temple*:—Would not make any important change in the School without communicating with the Trustees; upon his recommendation the Trustees would probably adopt the change and record it in writing; practically his discretion in the management of the School has never been interfered with; 141–145. His power in removing Masters; the practice; 146–151. The Head Master has the school-house, containing accommodation for 70 boarders, and a large garden and close, free of rent, rates, taxes, and repairs; the value is not stated in the returns of income. (*Mr. Hefford*:—The house and land would be between 400*l.* and 500*l.* a year; 152–153. (*Dr. Temple*:—Each Assistant Master is expected to devote himself exclusively to the duties assigned to him by the Head Master, and is responsible to him for the discipline and good behaviour of his form; the Head Master relies on the reports of the Under Masters, but it is his practice occasionally to examine the forms of the Under Masters; 154, 155. No difference in the status of a mathematical and a classical Master; the same deference is shown to the latter; he has the same power of discipline; has boarding-house; 156–159. Drawing Master, 160, 161. Writing Master teaches writing and arithmetic; he and his assistant teach 137 boys; this they can do efficiently according to the time allotted to the subject; the present Master is an exceedingly good man; he has been the Master 46 or 47 years, and never failed in his duty; in the event of a change would get a University man, and so make the writing Master an additional mathematical Master; the present Master is engaged in teaching about six hours a day; 162–172. Writing Master receives 5*l.* 5*s.* as librarian; 173–177. The Chaplain, with a salary of 50*l.* a year, is the Head Master; the salary handed over to the chapel; the history of this state of things is this: Dr. Arnold, on becoming Head Master, was desirous of preaching to the boys, and to avoid incurring the possible imputation that he undertook the office of Chaplain on account of the salary, he asked the Trustees to be allowed to act as Chaplain, giving the 50*l.* to the chapel for whatever purposes he thought best, and it is still paid over to the chapel improvement fund; 178–186. The Trustees never, to his knowledge, wished to interfere with the appointment of the Under Masters, 187. (*Mr. Hefford*:—The Trustees used to appoint three Exhibitioners every year for seven years; and by an arrangement of the Charity Commissioners in 1859, they can now appoint five for four years, making a difference between 20 exhibitions and 21; by the 59 Geo. III. c. 71, the Trustees are required to send eight Exhibitioners, all above that is permissive only; order of the Charity Commissioners on the subject; 190–195. No power exists of altering or amending orders, except by going to the Charity Commissioners, and, with their sanction, to the Court of Chancery; 196–198. (*Dr. Temple*:—The School has no Visitor; but the duty of Visitor is efficiently performed by the Trustees; the Bishop of the diocese has no visitorial power over the School; 199–202. (*Mr. Hefford*:—When a second Master was appointed, his salary was 80*l.*; Mr. Chartres was appointed when Dr. James came from Eton and introduced the Eton system; 203. (*Dr. Temple*:—Dr. Arnold's scheme, having mathematics and modern languages taught as part of the regular school work by the classical Masters in their forms, afterwards modified by Dr. Tait, whose modification is now matter of history only; 204–207. (*Mr. Hefford*:—A sum of 15½ guineas for the non-Foundationers, fixed by the Trustees in 1828 at the same time as the 3½ guineas for the Foundationers' instruction in mathematics and modern languages, sanctioned by the Court of Chancery in 1851; it would not be competent for any person but the Trustees to alter or increase it; 208–214.

TEMPLE, the Rev. FREDERICK—*cont.*

(*Dr. Temple*:—Thinks Dr. Arnold's system a bad one, because it mischievously restricted the choice of Masters if a man was obliged to teach classics, mathematics, and French and German; his opinion would be the same, supposing the classical Master were required to teach French only; it would sometimes deprive the school of the best man in classics; 215–220. The subject pursued; 221–224. Duties of senior composition Master; and junior; 229–231, 239, 240, and 254. Reserve fund explained; 242–244. A classical private tutor, at a fee of 10 guineas, is practically necessary in all the forms between the Lower School and the Sixth; the private tuition effects the promotion from form to form, and where a boy has reached the highest the assistance becomes practically unnecessary; most of them, however, probably nine-tenths, continue to pay the tuition fee; the private tutor would not be the boarding Master, if the boarding Master were a mathematical or modern language Master; a Foundationer who applied for would have a private tutor gratis; the subject pursued at great length; 245–282. The senior and the three mathematical Masters are limited to 50 mathematical pupils each; that is not too large a number; the Master has to give each set two hours' instruction a week, and this is as much as they ought to undertake, over and above their school work; the regular instruction the boys get in school is included in the ordinary school charges; this is extra work for special boys, whose parents wish them to learn more of mathematics; 283–286. Foreign language Masters: both teach French and German; one an Englishman, the other a Prussian; they find no difficulty in maintaining order and discipline; are on precisely the same footing as the mathematical Masters, both in and out of the School, and one of them has a boarding house; the pronunciation in French and German of both Masters is good; 287–310. Every non-Foundationer pays 30*s.* to the writing Master; if he does not require instruction in writing or arithmetic, he gets extra lessons in mathematics; small deduction for the reserve fund; 311, 312. Profits of the boarding houses; averages them at 14*l.* a boy, or 17*l.* 10*s.* at the Head Master's, where no rent is paid; 313–315. The incomes of the 19 Lower Masters average 700*l.* a year, exclusive of the profit of the boarding houses; probably the total income of the seven senior Masters is about 1,600*l.* a year each; 313–321. The present Masters are enough to teach the School reasonably well, but there can be no doubt that a few more would be a great improvement; it is, however, questionable whether the salaries should be further lowered, as though first-rate men can be obtained, they cannot be had so easily as they could three years ago; and it would be a great mistake to lower the standard of Assistant Masters, in order to make the average size of a form 29, instead of 33; three years ago he asked a man to come, and he came; this year he asked four men to come, and they declined on the ground that the money was not enough; has not been able to hold out to a man a prospect of his coming in time into 1,600*l.* a year, because he cannot tell that when the turn should come, the School would be full; all he has been able to say has been, "You will get so "much a year, and there are so many boarding houses, to one "of which you can look forward;" 322–325. As there is not room for more boys in the School, if boarding houses were to be increased the number of boarders in each house must be diminished, and this would take away one of the great inducements to able men to accept Masterships; cannot give an average of the number of years a man would have to wait for a boarding house; has known a man wait 10 years without getting one, and has known another get one in two years; the subject of Masters' income pursued; the mathematical and modern language Masters get houses just as the classical; 326–338. Number of boys in form and as private pupils; 339–341. No appeal to the Trustees against the Head Master in his time; one in Dr. Goulburn's; 342, 343. Assistant Masters are all from our own Universities, except one modern language Master, who is a foreigner; in selecting Masters, no preference is given to a Rugby man; 344–346. The Foundationers wear no particular dress; 347, 348. Requiring a two years' residence has somewhat checked the influx of strangers, but those who do come stay longer; they now frequently come before their boys are old enough for school, so that when they are old enough they become Foundationers at once; 349–351. (*Mr. Hefford*:—The position of the Foundationers is much more advantageous than it was originally; the education is infinitely superior, and more varied; 352, 353. Has known Rugby 26 years, during which it has increased from a population of under 4,000, to 7,818; in 1831, it was 2,500 only; the increase has arisen by the immigration of new inhabitants, in some measure owing to the railways, but mainly to the popularity of Rugby as a place of education; the town is so altered, that a person set down in it without being told where he was, would not recognize the place; the value of the property in it, during the last 30 years, has probably increased 25 per cent.; 354–368. The population that supplies the Foundationers is chiefly a fluctuating population; people come to the place to get the benefit of the education for their children, and then leave; if a person 300 years ago left a school for the benefit of the inhabitants of the town in which he lived, those inhabitants did not bear the same relation to the locality that the present inhabitants of Rugby do; there are six resident boys in the School who are not Foundationers;

TEMPLE, the Rev. FREDERICK—*cont.*

they are in the course of qualification to become Foundationers, every one of them; they become qualified *ipso facto* by living there two years; does not know the proportion between the *bonâ fide* residents, and those who come for the purpose of the education; 369–380. Any tradesman of Rugby can send his son to the School; 381. (*Dr. Temple*:—Foundationers admitted by the Head Master without application to the Trustees; 385. Has three times as many applications for the admission of non-Foundationers as he can take into the School; 391, 392. The 14,000*l.* raised under the 54 Geo. III. was spent in the erection of a chapel, and increasing the number and stipends of the Exhibitioners; 386–390. School bills are sent in to the parents twice a year; 65*l.* is the half-yearly average; has known the yearly bills amount to less than 100*l.*; 393–401. Dancing, drawing, drill, rifle corps, mentioned; 402–407. Assignment of "studies" and bedrooms depends solely on the discretion of the Masters of the boarding houses; it is rare to have as few as two boys in a bedroom; brothers are generally placed together; 411–415. Prefers the Rugby system of studying in the studies, to the Eton plan of studying in the separate bedrooms; also prefers large bedrooms, by which he means rooms containing more than two; private prayers are said in the studies; or in the bedrooms, before going to bed; 428–443. Diet; the food is good, sufficient, and well cooked; his own boys eat nearly 1 lb. of meat a day; complaints rare; when made, inquiry was at once instituted, and remedy applied, if any required; resort to pastrycooks neither customary nor recognized; 416–421. Washing and bathing, sponge baths, bathing in the Avon; 444–450.

Further examined, with Mr. Hefford, page 254.

(*Mr. Hefford*—explains the capitation fee paid to the Head Master for a Foundationer by the Trustees; 3*l.* paid under 17 Geo. III., 2*l.* by the 1808 order of the Court of Chancery, and 1*l.* 6*s.* by the 1823 order of Chancery, and another fee of like amount, namely, 6*l.* 6*s.*, divided among the Assistant Masters; 451–465. By an order of the Trustees, in 1828, private tuition is made optional, and the price fixed at 10 guineas for the Upper School and six for the Lower; such order has not been altered, but 10 guineas is now paid for the Lower School as well as the higher; 465–477. (*Dr. Temple*:—Does not know when 10 guineas were first taken instead of six; it was before he became Head Master; there are very few in the Lower School who have private tutors; 478–480. (*Mr. Hefford*:—Under 17 Geo. III. c. 71, the Writing Master's remuneration is 40*l.*; but in 1826 the Trustees increased it to 50*l.*; 481–483. The witness is examined with regard to the exhibitions charged in the account put in at 960*l.*, and explains the change which has been made with regard to them; 484–488. At the time of the Founder's death, the value of the Warwickshire property was more than twice that at London; now the London is 46 times that of Warwickshire; 489–492. At present there is not a Brownsover boy in the School; all the Foundationers are from Rugby; 493–496. Hands in a table showing the population of Rugby at different periods from 1563 to 1861; 497–500. The rateable value of the property has trebled in 30 years; 502. Rugby was originally a chantry attached to Clifton, but that was anterior to the time of the Founder; 501. Portions of the Head Master's land have been added in recent years to the School close; perhaps other ground in the neighbourhood might be obtained for the Master's use, but that is doubtful, and at all events the price would be high; 524–542.

Dr. TEMPLE further examined alone, page 257.

The arrangement not to take boarders under 12, but to admit resident boys earlier, if competent to commence learning Latin, does not affect the prosperity of the School; 543. Would have no objection to make final and compulsory the resolution of the Trustees to discontinue appointing to fellowships, except in special cases; 544–547. The accounts contain all the school-payments made by the Head Master, except a few prizes which are entered in the School lists; 548–555. If a boy is so backward that he cannot rise above the Lower School by the time he is 16, or reach the Sixth Form by the time he is 18, it is presumed that the Rugby system is not adapted for his education, and that it is better that he should be sent where he can get more individual instruction and special preparation; hence the rule that a boy cannot remain in the Lower School after 16, nor below the Sixth Form after 18; 556–558. The rule is not strictly adhered to, but it is never broken without special permission; 559–562. A few boys are placed in the Fifth Form on their arrival; none in the Sixth; 563–567. A boy is required to leave at the end of the half year following his nineteenth birth-day; 566–568. The Trustees are always consulted by the Head Master before the introduction of any new study into the School; 569–573. Every Assistant Master has a large discretion in determining what books he would use in teaching his form; he cannot, however, use any grammar he likes; at the beginning of the half year he sends a report to the Head Master of what he is going to do in his form, and then the Head Master interferes, if he thinks proper; the Head Master is responsible for everything, but he consults the other Masters once a month; 574–586. Dr. Temple explains by reference to a table the constitution and working of the "parallel divi-"sions;" 587–608. The classical Masters teach divinity and history; in these subjects they are bound by a cycle which extends over three years, and which is so arranged that the great

RUGBY.

TEMPLE, the Rev. FREDERICK—*cont.*

bulk of the School is working at the same periods at once; explains this; 609–619, 624–627, and 638–639. Holiday tasks; 620–623. Determination of the number of sets in mathematics by the mathematical and modern language Masters; 628–637. Physical science; modern languages, how far compulsory; French learned first, then German; under the present arrangement a boy may go through Rugby without learning French or German at all; there are very few who do not study modern languages; modern language conversation classes not compulsory; school details and entrance examination to determine the boy's position in classics, modern languages, and mathematics; 640–675. Mode of regulating promotions; the supremacy of the classics maintained by the greater number of lessons given in classics; the same number of marks given for each lesson; the proportion of marks may be stated at 78 in classics, including divinity and history, 12 for mathematics, and 10 for modern languages; more School details; 676–709. The examinations are searching; the whole School have the same papers in the June examination, not in the December; the two examiners from Oxford and Cambridge are informed before-hand what subjects they are to examine in at Christmas; so are the Vice-Chancellors who appoint these examiners; the same examiners examine in mathematics, modern languages, and natural science, getting assistance in any division if they require it; 710–737. Further details as to the examinations; 738–780. Extras, details concerning them; in classical extras the boy always has the assistance of his private tutor, in mathematical if he chooses; 781–808. Exhibitions; 809–813. Work of private tutor. Private tutor reports to the parents monthly concerning his pupil; when the pupil does not board with the tutor, the boarding house Master reports as well, adding to the tutor's report what he thinks of the boy's general conduct; 814–828. The boy chooses his boarding house, and the head of the house is his tutor; the boy cannot change; the boys have most confidential communications with their tutors; if he lodged in the house of a mathematical Master he might go to that Master, but as a rule he goes to his tutor; thinks the tutorial system necessary, and that it is also beneficial both intellectually and morally; had he to go to a new school to organize it he would introduce the tutorial system, but not in a very small school, because there every Master knows every boy, whereas in a large school this is quite impossible, and with the tutorial system every boy is attached to some one; the subject pursued; 829–857. The average number of boys under a Master is now 33, the average number of pupils under a classical tutor 45; does not consider the numbers too great for either Master or boys; 852–854. When boys, under circumstances, are allowed to drop their Latin verses in order to take up some other study, they fall off in their classics and lose their interest in scholarship; 855–858. The libraries in the boarding houses are much used; the boys subscribe 10*s.* a year; they select their own books but have to take them to the Master of the house for approval; 859–865. Prizes given for drawing, with marks enough to make the difference of a place or two at the end of the half year; this works very fairly; gives the marks himself with the drawing Master; 866, 867. Pains have been taken by successive generations of Masters to foster, in the public opinion of the School, a strong sense of truth, and a strong sense of the duty of keeping up the good name of the School; the Sixth Form boys are considered by their school-fellows as the natural guardians of the good name of the School; 868, 869. All the boys attend service in the chapel on Sundays, Good Friday, Ascension Day, All Saints, the 20th October, which is Lawrence Sheriff, the Founder's day, and Passion week; on other occasions there are prayers in the great School; prayers in the houses every night; also on Sunday mornings, unless there is early service in the chapel; on week day mornings there are prayers in the great school; on the question of having the morning prayers in the chapel has consulted many old Rugbeians, and the result is that all who are sons of clergymen are in favour of using the chapel, all the rest against it; for himself he would not make the change without being sure of its utility, for it would be a mistake to outrun the religious feelings of the boys themselves; the prayers are read in the chapel by the Masters in rotation, minus the Litany; 870–882, and 884. Preparation for confirmation devolves on the tutors and the boarding house Masters, if clergymen; 883, and 892–895. The attendance at Holy Communion is large immediately after confirmation, subsequently it diminishes as boys leave School; there is a reverential feeling among the boys; 885–891. Sunday lessons; 898, 899. Punishments: solitary confinement for an hour or two, and caning on the hand (not exceeding half a dozen blows), writing out Latin and Greek, learning by heart, flogging; writing out may tend to damage the handwriting a little; flogging very rarely inflicted; the Sixth Form exempt from flogging, it is not used even in the Fifth, a big boy is not flogged; the average of floggings might be four a year; it would be inflicted for telling a lie, common swearing, or obscene language; it sometimes happens that parents are requested to remove their sons; perhaps once a year a boy is expelled; little boys would be flogged privately, but boys who are flogged for grave moral offences are generally punished in the presence of four of the Sixth Form; the subject pursued;

TEMPLE, the Rev. FREDERICK—*cont.*

900–940. The Sixth Form also report offences to the Head Master, if such as they cannot correct themselves, or think it better to leave to the Head Master; this happens three or four times a year; an offence committed in a boarding house would be reported to the boarding house Master; if committed in the school close, to the Head Master; 941–945. A Sixth Form boy may set lines to an offender not in the Sixth Form, or cane him over the shoulders, but not kick him, or strike him with the fist; 946–951. The real check to an excess of punishment is the power of appeal, either to the whole Sixth Form or to the Head Master; an appeal is made every now and then; the Sixth Form may inflict punishment on the spot, if not stopped by appeal; if the appeal is claimed, he holds his hand; it is possible that a Sixth Form boy of 18, might cane a boy of 17; 952–959. In the word "cane," witness includes an ash plant, or a small stick; the Sixth Form carry canes habitually only when they are præpostors, and are "calling over"; 960–963. The Sixth Form have bounds, but they are more extended than the bounds of the other boys; they have likewise a few trifling exemptions; 964–968. The management of the school close is in the hands of "the big side levee," consisting of all the boys in the Upper School; they make regulations for the games, and have a right to tax the whole School, subject to the approval of the Head Master, and subject also to the condition that they themselves pay twice as much taxation as the rest of the boys; 969. Fagging, as it exists at Rugby, is on the whole healthful; the Sixth Form fag the boys below the Upper School, so that the "Twenty," the Fifth, and the Lower Fifth can neither fag nor be fagged; the fags do not wait on their fag masters at meals; at supper, they fetch their master's bread and cheese, and toast the bread. (*Lord Devon:*—I presume from this that they do not do what used to be done in my time at school, clean shoes? (*Dr. Temple:*—No; 970–976. The Sixth Form have also the power to compel all boys to take part in the games who are not exempted by authority; what is called fagging at cricket has very much disappeared, but a Sixth Form has power to call to a boy under his jurisdiction, "Come and fag out," and keep them fagging an hour and a half; but this is rarely exercised; there is no fagging at rackets; the Sixth Form can compel the attendance of the smaller boys at foot-ball; 977–992. Instances of gross abuse of the power of fagging would be sure to come to the knowledge of the Masters if they were frequent. Explains how; if a Sixth Form boy saw another Sixth Form abuse his power he would bring the case before the Sixth Form generally; the Sixth Form is too small a body to hold its power by force; 993–999. Very little bullying at Rugby; public opinion would resist bullying, and resist it indignantly; 1000–1002. A strong feeling exists in the School of the absolute duty of telling the truth, not only among themselves, but to the Masters; 1001–1003. There are only two Terms at Rugby, although at other Schools, such as Eton and Harrow, there are three; prefers the Rugby practice, and does not think the lengthened School periods are attended with any improper strain on either Masters or boys; 1004–1012. Time for work and time for play at Rugby; 1013–1018. The School and close contain 13 acres; 1019, 1020. The volunteers are under rules made by themselves; opinions on this and collateral subjects; 1021–1026. It more frequently occurs than the world imagines that boys remarkable for intellectual power are also remarkable for athletic superiority; 1027. Rugby, at present, has 14 Masters to 463 boys, giving 33 boys to a form; thinks 33 rather too many, because, with an average of 33, there must inevitably be in some of the forms 38, or something like that, and that is really too many; an average of 26 would be preferable; 1028–1030. Is in favour of raising the School fees from 15½ guineas to 20; believes this would not be complained of by parents, and the gain in teaching would be great; more boys are refused every year than admitted; that extra charge would give four new classical Masters; 1031–1036. States and explains his opinion as to the value of mathematics and physical science as instruments of mental culture, and as compared with literature, which he considers superior in this respect; the subject amplified; 1037–1048. Supposing the School fees raised to 20 guineas, he would recommend that money should be borrowed in order to enlarge the School; and in the event of the Trustees agreeing to his suggestion, has no doubt that means could be found of buying either land or houses for the enlargement; moreover, a part of the School property down behind the Chapel might be used for new schools; 1049–1051. Cannot suggest any improvement in the existing system of education at Rugby, but thinks the system may be improved in its operation; 1052–1054, and 1056–1060. Opinion as to the advantage of the public school system, both to the diligent and to the idle boy; 1055. Though the present teachers of French and German at Rugby can at the same time form the minds of their pupils, he regards the modern language masterships as the most difficult to fill up; 1061, 1062. Expresses an opinion adverse to a further extension at Rugby of what in its development is denominated "bifurcation;" on coming to Rugby his inclination was strongly the other way; "bifurcation" is being tried at Cheltenham and Marlborough; 1063–1068. During the last four or five years a great many scholarships have been opened at the Universities for classical and mathematical attainments; good scholars of Rugby are beginning to derive great benefit

TEMPLE, the Rev. FREDERICK—*cont.*
from their success in the competitions; it is an exception for a boy to leave Rugby with an Exhibition and not obtain an open scholarship at one of the Universities; Rugby gave six Exhibitions last year, varying from 40*l.* to 80*l.*, and five of the winners obtained scholarships also; in that way none of the five have less than 120*l.* a year, and some have 150*l.*; 1069–1070. Explains some apparent discrepancies in the returns of school work, especially with regard to the absence, in the higher forms, of English composition, &c.; and gives answers on various points of school detail; 1071–1104.

VECQUERAY, G., Esq. (The Rev. P. BOWDEN SMITH examined with him), page 283.
When he first went to Rugby, the quality of the meals was not good; the food did not seem to be nicely looked after; Dr. Temple reformed that, and there is nothing of that kind to be complained of now; the beer was very good indeed; the diet was bread and butter for breakfast and tea, with either tea or coffee, meat for dinner, with pudding every other day, and bread and cheese and beer for supper; meat only once a day, unless the boys had been out for a very long run, and then meat would be sent in for tea; the boys used to procure meat for breakfast; 1642–1653. Mode of spending Sunday; chapel three times, Bible lectures and religious instruction, meals, much walking, and preparation on Sunday of Greek Testament for Monday morning; (Greek Testament also on Thursday) sermon in the afternoon by Dr. Temple or one of the Masters; Dr. Temple's sermons popular; boys also wrote letters home on Sunday; 1654–1688. The boys were very carefully prepared for Confirmation by Dr. Temple by means of lectures and private examinations; there seemed to be a proper feeling on the subject among the boys; one frequently heard the remark, "So and so is doing what one would not expect from "a fellow going to be confirmed;" 1684–1693. The Sunday after Confirmation the boys take the Sacrament, but there is no compulsion; 1694–1702. Thinks private prayer more likely to be offered in dormitories than in single rooms; a fellow would not like to be noticed as not saying his prayers; silence is required for prayer; 1703–1705. Prefers dormitories to small sleeping rooms, because there would always be a Sixth Form boy in such dormitory; 1706–1709. Effect of this on the Sixth Form boy in his private reading; 1710–1718. Thinks there was no bedroom bullying at Rugby; 1719–1725. Private tuition necessary as soon as a boy has reached the middle of the School, if he wants to have any position in the form at all; the boarder has a private tutor from his entrance; the fee is 10 guineas, paid as an extra by the parents; the subject pursued in detail; 1726–1754. From his experience at Cambridge thinks that the head boys of Rugby have read more when they come to the University than the head boys of Eton and Harrow, but not more than the head boys of Shrewsbury; 1755. Details of the classics generally read by a boy going to Trinity or Balliol from the front ranks of Rugby; 1756–1785. Thinks there is too much original composition in Latin and Greek at Rugby; and too little of translation into Latin and Greek; details on this subject; 1786–1806. Assisting each other in composition is not thought ill of in school; preparation of lessons; 1807–1817. The principal stimulants to work at Rugby are a desire to rise in the school, the hope of a prize, and the fear of punishment; 1818. The home influence operates well; the parents take interest in the progress of their sons; the school takes great interest in the public competitions and prizes; 1819–1822. Thinks the boys are not overworked; 1823. They work more than 30 hours a week; 1835–1839. Operation of the parallel forms; 1824–1834. Considerable intercourse between the Head Master and the other masters and the boys; the Head Master and other masters would see the games, and four or five of the masters join; one of the masters was the best hand at foot-ball in the School; 1840–1850. About two hours a week given to modern languages in School, besides exercises and preparing lessons; much attention paid to the lessons, which moreover count in the marks; one of the teachers is a German, but he has no difficulty in keeping order; did no French at Rugby, he knew it when he went; but learned German; knew nothing of the language before, but when he left could read Schiller pretty well; learned it grammatically, with a correct pronunciation, but could not speak it; details as to the learning of modern languages at Rugby, and opinions on various points of the subject; 1851–1884. The classical fellows at Rugby thought modern languages *infra dig.*, and a bore; 1874 and 1889. Thinks it would be unpopular among the boys to give modern languages a more solid place in school teaching than they now occupy; 1890. Physical science as an alternative of modern languages; 1885–1888, and 1902–1905. History and geography not enough attended to at Rugby; thinks an hour a week might be spared to those subjects from classics; 1891–1901 and 1910–1913. Private reading of modern literature: Carlyle, Shakespeare, Tennyson, Macaulay were read, also the novels of Scott, Kingsley, and Dickens, not those of Thackeray; 1914–1927. There was a debating society at Rugby, to which members were elected by ballot; the members discussed the politics of the day, such as the present government, and past politics, such as Charles I.; the boys read up for the debates, and so acquired an amount of historical and other knowledge;

VECQUERAY, G., Esq.—*cont.*
1928–1948. "*The New Rugbeian*" magazine; 1949. Boys distinguished as scholars are also good at games; 1954–1957. Hare and hounds used to involve a run into the country of a dozen miles; most of the runs at present are about five or six miles; 1958–1965. Looking back to his time at Harrow, thinks it was employed educationally as well as it could have been; cannot imagine any better manufactory for turning the raw material to the best account; with the exception of his suggestions as to translations and history and geography, he does not wish to see the Rugby system materially altered; he finds the position of the Rugby boy generally as good as any other at the University; thinks the Rugby system as good as a public school system can be made; and looks to the education he received there with satisfaction and gratitude; 1966–1971. RUGBY.

WARNER, HENRY LEE, Esq., page 286.
Went to Rugby School in 1854 and left in 1860, since which has been at St. John's College, Cambridge; 1502, 1503. There are a number of residents of Rugby and within a radius of five miles whose sons are at the School, as many as 90 boys; they are upon a footing of perfect equality with the other boys when they get into the Middle or Upper School; some are the sons of tradesmen of the town; no difference is observed with regard to them when they rise; but very few do rise, for they enter the School knowing no Latin or Greek, and are either taken away very soon or else remain in the lowest Forms; 1504–1511. Duties and power of monitors described: they have to call over at dinner, at locking up, and at prayers, to see that the boys are in bed at a quarter past 10, to keep silence for about five minutes between 10 and a quarter past for private prayers, also to say public prayers in hall at half-past nine should the Master not come down, and besides this, they have to prevent any excessive noise in the house; then, out of the house they have to interfere on seeing any boys enter a public-house or do anything else that is wrong, to prevent smoking, bullying, or anything of the kind, and generally to look after the fellows; they could send the boys up, set them lines to learn or write, or give them a licking with a cane, subject to appeal; 1512–1520, 1530, and 1538–1541. The caning is a serious punishment; in School it is generally inflicted on the spur of the moment, but a Master is present; on other occasions they would have the offender up to their study, or before the Sixth of the house, or before the Sixth of the School if it were a very public offence, and even in some cases before the whole house; this would be in a very grave case indeed, where all the house was interested in seeing the punishment, *e.g.*, in an aggravated case of bullying; 1521–1523 and 1531–1535. There was very little bullying at Rugby in his time; personal violence would be aggravated bullying; 1524–1526. Silence is not kept at dinner; the boys are allowed to talk during dinner, in their bed rooms also after they are all in bed; 1527. The monitorial system as established at Rugby works satisfactorily and has the support of public opinion; very few fags object to it; 1528, 1529. More details of the monitorial system; thinks that discipline is far better in the hands of the Sixth Form than it would be in the hands of the Masters themselves; remembers no flagrant instance of monitorial abuse; 1542–1572. There was little drinking at Rugby in his time; when he went, public opinion was neither against nor in favour of the practice of drinking; when he left it was rather against it; public-houses were little used, visiting them was rather discountenanced, and a monitor would stop it; 1573–1579. After a great match of foot-ball or cricket, a player would get beer at a public-house, and could take a little fellow in with him; cases of drunkenness would occur chiefly on whole holidays, when, with consent of parents, the boys could go to Warwick or Kenilworth, and stay out all night, sleeping at a friend's; 1580–1589. Cards not allowed at Rugby; in his second half some fellows were discovered playing; there was little gambling; 1590–1592. The Sixth Form would consider themselves bound to interfere in case of any gross immorality; the tone of the School high; there was a very strong feeling against lying, even to the Masters; "cribbing" was the only thing that seemed to require rectifying; 1593–1597. The Sixth Form punished for smoking; the School generally did not regard smoking as an offence, they thought it silly; if a Sixth Form were discovered smoking by another Sixth, a "Sixth levy" would be called, and the offending Sixth might be obliged to leave; 1593–1604. Dormitories; not the practice at Rugby to have single rooms for the boys; 1605–1611. The boys in the Sixth Form, about 40 in number, alone have the power of fagging; does not think the power is often abused; fags would sometimes have to fetch hot water in the morning, and to make the toast for breakfast and tea daily; 1612–1616. There was also what was called "night fagging," in which the fags had to wait half an hour, while the Sixth and Fifth were supping together, to fetch bread or beer, or anything of that sort; 1616–1618. The "study" fag had to dust the room, and put the books on the shelves; rather liked the fagging, because it gave him an opportunity of talking to the swells in the School; kindly relations generally established between the Master and his fag; the Master protects his fag, and sometimes looks over his lessons; never knew an instance of spiteful fagging; 1619–1629. The fags had nothing to do with keeping the cricket ground in order; junior boys were liable to be fagged out at cricket, but that is almost done away;

RUGBY.

WARNER, HENRY LEE, Esq.—*cont.*
were compelled to play at foot-ball; 1630–1636. In the cricket season fifteen hours a week would be devoted to cricket; 1637–1641.

WILSON, J. M., Esq., page 280. (*See* evidence of the Rev. R. B. MAYOR, page 280.)
Further examined.
Came to Rugby three years ago as mathematical Master; had studied no physical science experimentally till six months before; 1357–1361. Stays in his school about four hours a day, three days in the week, working with his mathematical pupils; during a portion of that time the chemical pupils are in the laboratory adjoining, working at the analyses which he gives them, he being at hand to answer questions in case they find a difficulty; 1362, 1363. Facts and opinions with regard to the character of his pupils; 1364–1371. Some of them are of the highest ability; and on the whole they are above the average of the School; 1372, 1373. Only one physical science set in the Sixth Form, consequently some of his pupils are just entered, and some have been studying two or three years; meets the difficulty by sending the advanced pupils into the laboratory while he delivers lectures to the new comers; 1374–1384. Prizes for proficiency in physical science; fellowships and scholarships at Universities, some at Christchurch and Magdalen, Oxford, and

WILSON, J. M., Esq.—*cont.*
possibly some at Caius at Cambridge; they do not act as an efficient encouragement to the study; 1385–1402. The study of natural science is not prosecuted at Rugby as he would wish to see it, but he does not think it can be combined to a much greater extent than at present with a classical education; if all are to study classics, he does not think much more can be done in natural science; classics would probably suffer if he took his classes three times a week instead of twice; 1403, 1404. Thinks the alternative between modern languages and physical science ridiculous; the boys who wish for a modern education wish to do both; what he would suggest is, that classics should be left as free and open as possible; there are boys who gain nothing whatever from the classics, and when they have reached the Fifth Form they might, with the sanction of their tutors, drop some of their classical work, others might drop modern languages, but it should be left very free if natural science is to be much studied; there is one other method of teaching natural science; there might be periodical lectures, say once in three weeks, and the chemistry class should be purely optional, not an alternative at all; a good lecturer might make the subject very attractive; 1405–1412. Altogether, however, he thinks the state of instruction and proficiency in physical science at Rugby is as satisfactory as anything else in the School, as satisfactory perhaps as the study of classics; 1413, 1414.

Shrewsbury, Thursday, 22nd May 1862.

PRESENT:

Earl of Clarendon.	H. Halford Vaughan, Esq.
Lord Lyttelton.	The Rev. W. H. Thompson.

The Earl of Clarendon in the Chair.

The Rev. Benj. H. Kennedy, D.D., Head Master of Shrewsbury School; the Rev. John Yardley, Vicar of St. Chad's, Shrewsbury, the Rev. E. C. L. Wightman, Vicar of St. Alkmund's; the Rev. Thomas B. Lloyd, Perpetual Curate of St. Mary's; T. W. Trouncer, Esq., Mayor of Shrewsbury; and J. J. Peele, Esq., Town Clerk and Bailiff of the Free Grammar School, called in.

1. (*Lord Clarendon to Dr. Kennedy.*) We have received a memorial signed by four out of five of the Trustees of Dr. Millington's charity, and also by the Mayor of Shrewsbury and the Town Clerk and Bailiff. Do you speak for the Trustees on this occasion?—(*Dr. Kennedy.*) The Trustees are kind enough to desire that I should do so.

2. (*Lord Clarendon.*) The Commissioners are glad to see you and these gentlemen to consult with you as to the memorial you have submitted to us, and to receive any information from you as to the conversion of these four Millington scholarships. Perhaps in the first place I had better ask you whether there has been any communication with Magdalen College on the subject. Are they aware of your wish?—(*Dr. Kennedy.*) Certainly, they are aware. I mentioned to Mr. Bright, the tutor, for the information of the college, that it was our intention to lay such a memorial before the Commissioners, and they are quite aware of our general feeling on the subject. We think the school has an equitable claim to the benefit of a moiety of the estate, one half having been alienated entirely from the school for the sole benefit of Magdalen College. We contend that it was the intention of the testator, Dr. Millington, who was born in the town, and was educated at the school as well as at Magdalen College, that the school and the college should equally share the benefit of the estate. We contend that there is a peculiar hardship in this case, because the benefaction was for scholarships or exhibitions for the school; and the conversion of those into fellowships, or rather the creation of fellowships instead of new scholarships or exhibitions, was an afterthought, and only decreed by the Court of Chancery, at the instance of the Trustees, in the latter part of the last century. One of the two fellowships was founded so late as 1817, and the other only a few years ago, in 1856, and we are certain that the four Shrewsbury Trustees would never have concurred in the petition to Chancery to create fellowships instead of scholarships or exhibitions, if they had believed that those fellowships would be alienated to the sole benefit of Magdalen College, while the school was to be left with only a moiety of the benefit arising from the half-share. At present the estate which was intended for the equal benefit of two public institutions has three-fourths of it appropriated to the benefit of one of those public institutions.

3. In what manner did Magdalen College receive the information of your intention?—They did not answer the letter, nor perhaps was it necessary that they should do so. I mentioned it in a letter I was writing to Mr. Bright in answer to one from him. I have intimated to the master and the tutor of the college all along that it was the intention of Dr. Millington's four Trustees in Shrewsbury to moot the question whenever they had an opportunity of doing so. They have been made quite aware of it.

4. You consider you have given them sufficient notice of your intention?—I think so; I am sure I have substantially given them notice.

5. How long ago was that?—I communicated our intention to them a few days before the memorial was transmitted to the Commissioners.

6. That is some weeks ago?—Yes.

7. They had time to prepare any counter-statement?—Yes.

8. Do you conceive there will be any opposition on the part of the college?—I conceive there will, from the answer we received the year before last, when they stated that they had, under a pressure they could not resist, yielded to the arrangement when it was proposed by the Cambridge Commission. Our reply was that we should be willing to acquiesce in the surrender of the fellowships to Magdalen College, if the college would acquiesce in the surrender of the scholarships to Shrewsbury school independently of the college. But that was officially declined.

9. (*Lord Lyttelton.*) The master of Magdalen College is the other Trustee, is he not?—He is the fifth Trustee.

SHREWSBURY.

Rev. B. H. Kennedy, Rev. J. Yardley, Rev. E. C. L. Wightman, Rev. T. B. Lloyd, T. W. Trouncer, Esq., J. J. Peele, Esq.

22 May 1862.

10. He is in no way concurring or joining in the memorial?—No; we did not apply to him for that purpose.

11. The other four Trustees have done so?—Yes.

12. (*Lord Clarendon.*) You are aware that we have no power to give effect to your wishes?—We are quite aware that at present the Commissioners have no such power.

13. In what way would you suggest that we should assist you in giving effect to this proposal; in what way do you consider that we should proceed?—We had no definite notion of the way in which the Commissioners would be able to assist us; but we thought that the recommendations of the Commissioners of Public Schools might result in an Act of Parliament similar to that which was passed with reference to the two Universities, giving power to the Commissioners to carry out what they should recommend.

14. Or to some similar body?—Yes.

15. That in our report we should give our opinion upon this subject?—Yes.

16. Did the Cambridge University Commissioners express any opinion in reply to your application?—They said they had not the power to give effect to it.

17. But did they express any opinion as to the equity of your claim?—No, they did not express any opinion.

18. Are you clear of the accuracy of that statement that the Cambridge Commissioners said they had no power to open the scholarships?—Mr. Bunbury, the secretary, stated so in his correspondence with me. He said they had no power to open the scholarships, and they did not give any opinion upon the equity of our case. They said the disappropriation of the fellowships was in accordance with the general principles they had laid down; they had power to do that, and not power to do the other, and so on.

19. (*Lord Lyttelton.*) The four old scholarships are still existing, are they not?—Yes, they are. The state of the case is this—the Millington estate is let on lease at 250*l.* a year, and therefore we may assume it to be let not at rack rent; there is also an accumulated fund of 10,300*l.* consols. Thus the estate is very nearly divisible into two parts; and the claim we venture to lay before the Commissioners today is this: let the college take the estate and give us the money for the benefit of Shrewsbury school in such a way as the Commissioners may think proper to recommend Parliament to sanction. The equity of the case would thus be satisfied and a great public good conferred.

20. I see by this paper there are four scholarships existing of the value of 63*l.* each per annum?—Yes.

21. Those are four scholarships for the benefit of this school?—They are.

22. Scholarships to Magdalen College?—Yes.

23. And the important question relates to the surplus fund beyond that?—No, I think not. We claim first that those four scholarships should be open; that is we suggest as a matter of equity that hereafter, those scholarships instead of being appropriated to Magdalen College, should, for the benefit of Shrewsbury school, become exhibitions open to any college in either University, *i.e.* that they should be open as widely as possible.

24. In consequence of those two fellowships being now alienated from the school?—They have alienated the two fellowships and consolidated them into one, and they require of us now (and it has not been resisted on our part) to pay the entire sum of 252*l.* per annum into the hands of the bursar of the college, that is, of the master, and that has been done. We did not think it wise to attempt any resistance; we preferred making the equity of our claim, as it appeared to us, as widely known as possible, especially making it known to the Commissioners of Public Schools, in the hope that the case would recommend itself to them.

25. Then there would be one open fellowship on the one hand, and four open scholarships on the other?—That is so; one open fellowship, which was two appropriated fellowships, and equivalent to four scholarships in point of value.

26. (*Mr. Vaughan.*) Is the only destination prescribed for the scholarships that for the benefit of Shrewsbury school?—Shrewsbury school and Magdalen College.

27. I see in the table, page 21, "The relations of the "said Dr. Millington"?—That, I think, must be Mr. James Millington's. That is another foundation.

28. What I am alluding to are the scholarships of 63*l.* each per annum?—We have never heard of any relations of Dr. Millington in reference to those.

29. According to this table, those scholarships of 63*l.* each per annum are to be given in the first instance to the relations of Dr. Millington, who shall have been educated at Shrewsbury school?—I think that is not correct.

30. This table then is not absolutely to be depended upon except with reference to the exhibitions for the school, the funds for which you have in your own hands?—I think there must be an error as to the relations of Dr. John Millington.

31. (*To the Rev. T. B. Lloyd.*) You feel confident the scholarships are not given for the benefit of Dr. Millington's relations who shall have been educated at Shrewsbury?—I am very confident of that.

(*Dr. Kennedy.*) There is about 300*l.* in the banker's hands; in consols 10,300*l.*, so that there should be 10,600*l.* in money existing now.

32. (*Lord Lyttelton.*) The will of Dr. Millington has no relation to the fellowships at all?—No relation to the fellowships at all. The fellowships were an after-thought entirely, established through the application to Chancery. It was thought four scholarships were as many as were desirable, and as the number of fellowships in Magdalen College was small, it was, towards the end of the last century, suggested and acted upon that a petition should be presented to Chancery to have fellowships instead of scholarships.

33. (*Lord Clarendon.*) I suppose it is considered as a disadvantage that the boys should be bound to go to Magdalen College?—I wish to say with regard to Magdalen College, that you cannot have a more respectable, well-conducted college. We have the greatest possible respect for the master and for the members of the college; but it is one of the smallest colleges in the University, and of course it must be for the benefit of Shrewsbury school to have the choice as open as possible.

34. (*Mr. Vaughan.*) Upon what principle do the electors make their election?—The scholars are elected at Magdalen College; I believe the college has that right. We have always wished that they should elect immediately from the school.

35. Then it has been necessary they should go to Magdalen College, in the first instance, in order to qualify themselves as candidates?—That has been so.

36. In making their election what has been the standard by which they have made the selection?—That I am unable to state; I should say they have dealt fairly by the school.

37. They have done it by examination?—Yes, they have done it by examination. I do not think they have rejected a candidate; indeed, if I thought a boy from Shrewsbury was not likely to pass a fair examination I should strongly recommend him not to go up.

38. (*Lord Clarendon.*) They have always been filled up?—They have always been filled up since I have been Head Master.

39. (*Mr. Vaughan.*) You have no detailed information as to how the examinations have been conducted?—No.

40. Have you had any means of forming a judgment whether the boys elected were the best of those you sent up?—Yes, I think so.

41. (*Lord Clarendon.*) The boys are sent in the hope of their giving satisfaction?—Yes; the college have made no complaints; they have been well satisfied with those we have sent, and they have filled up the scholarships to their satisfaction.

42. They have always been filled up ?—Yes.

43. Did a greater number than four ever go up ?—Hardly ever, the number in the school being so small.

44. (*Mr. Vaughan.*) But on whom does that depend; does it depend on the option of the boys themselves whether they will go to Magdalen College, or are they recommended to offer themselves by the authorities here ?—It depends on the option of the boys; they or their parents sometimes ask my advice, and if they think proper to consult with me and I have an opinion I give it to them.

45. As to their fitness ?—Yes; I think no boy has ever proposed himself who was not fit.

46. (*Lord Lyttelton.*) In fact you send only four ?—Yes.

47. (*Mr. Thompson.*) There are a few exhibitions, tenable at any college, at Shrewsbury ?—No, except a small exhibition of Dr. Taylor's, we have none.

48. Do you think if you had some exhibitions tenable at any college it would be a benefit to the school ?—I think it would be a benefit to the school if we had four scholarships of 63*l.* per annum each, open to any college.

49. (*Mr. Vaughan.*) May I ask whether the benefit you contemplate would consist in having the choice of the place of their education at either university ?—Giving us the choice of the place of further education. Of course every parent who wished to send his son to a public school, with a view to scholarships or exhibitions, would be more likely to send his son to the school where the further place of education was open to his choice.

50. (*Lord Lyttelton.*) I believe there are some exhibitions in this list which are open to either university ?—There are some.

51. Are they open to all the boys ?—In default of certain preferential candidates. In point of fact I believe that five out of the six present exhibitioners were not preferential candidates. But it might happen otherwise; it might happen there would come up a number of boys claiming the exhibition as a matter of preference; all this is a matter of chance. In the scheme I have sent in I have suggested that it would be a great benefit to the school if the scholarships and exhibitions were all open.

The Trustees and Mr. Peele withdrew

The Rev. Benjamin Hall Kennedy, D.D., examined.

Rev.
B. H. Kennec

52. (*Lord Clarendon.*) You are Head Master of Shrewsbury school ?—I am.

53. How many years have you been so ?—Twenty-six years at Midsummer.

54. "The property held by or in trust for that "school consists of the school buildings, master's "houses, and tithes, a freehold house at Grinshill, "two chief rents, and money invested in the public "funds." As to the money invested in the public funds, from whence was that derived ?—The Trustees have 9,000*l.* in the public funds which forms part of the school estate, 3,000*l.* of which is now set apart by them for the purchase of those houses which constitute my junior house, the garden attached to it, and the house which the Commissioners have seen, appropriated to studies.

55. (*Lord Lyttelton.*) How long has that part of the property been in that form as money in the funds ?—I am unable to state, but longer than my head-mastership.

56. (*Lord Clarendon.*) "Shrewsbury school was "founded by letters patent of King Edward VI. "A.D. 1551, addressed to the bailiffs and burgesses "of Shrewsbury, giving them certain tithes to found "a school, entitled 'Libera Schola Grammaticalis "Regis Edwardi Sexti,' empowering them to elect "masters and to make statutes, with the advice (cum "advisamento) of the Bishop of Coventry and Lich-"field." How far is that acted upon as to taking the advice of the bishop; is he always consulted, or does he merely give his approval ?—I think there has been no new statute made. There was a scheme sanctioned by Chancery ten years ago, and the bishop appeared by counsel, and gave his consent officially to that scheme. I know of no instance in which the bishop has been called in to advise.

57. "The sole relation in which this school stands "to any other corporate body is comprised in the "two provisions of the Act 38 Geo. 3." ?—The Commissioners will find as they go on, there has been a change in the constitution of the Trustees; the bailiffs and burgesses have ceased to have any share in the government of the school.

58. "(1.) That the mayor of Shrewsbury for the "time being is chairman of the Governors and "Trustees. (2.) That when a vacancy occurs in that "body the other Governors and Trustees nominate "three qualified persons to fill it, of whom the cor-"poration elects one." How does the corporation proceed in making that election; is it by vote ?—Yes; there was an election last week; I understand one member of the corporation was desirous of sending the list back to the Trustees to nominate other persons, but Mr. Peele, the town clerk, informed them that if they did so, the Trustees would have the power of selection in their own hands; whereupon they elected Mr. Salt. After the Municipal Corporation Act it was considered that the corporation of Shrewsbury retained its power, otherwise I believe at that time the control over schools was taken out of corporations. It is a little inconvenient to have the affairs of the school made the subject of debate in a corporate body. I am not aware that any benefit arises from the power remaining in the corporation to elect one of three persons.

59. (*Mr. Thompson.*) The Governors and Trustees should be a distinct body ?—I do not mean to advance any opinion on this case, but merely to speak generally of a corporate body.

60. They should be a resident body ?—The locality should be recognized; but it would be undesirable that such a body should be the sole or the dominant power.

61. (*Lord Clarendon.*) You are alluding to the nature of a corporate body, not to the present corporation ?—I am alluding to corporate bodies generally, not to the present corporation.

62. (*Lord Lyttelton.*) "Respecting the title, "*Libera Schola*, I append an argument which has "appeared in several public prints, tending to show "that *Libera* means exempt by royal grant from "other superiority." Has that argument ever been controverted in any public or practical way since it appeared ?—There was an attempt made to controvert it by a barrister of the name of Grady, but I think it was rather an inefficient one.

63. That was merely in the way of controversy; nothing practical turned upon it ?—No; nor was it intended to have any practical effect, except so far as it takes away the power of raising a grievance which some people are fond of exercising.

64. (*Mr. Thompson.*) There is no contest going on in any Court relating to that question ?—No; it was purely as an antiquarian question I brought it forward.

65. It has not been raised in any practical shape ?—No.

66. (*Lord Clarendon.*) There is one question I wish to ask you upon this paragraph 2, (Part II.) "On the one hand the bailiffs and burgesses having "the vantage ground of King Edward's charter, but "also tempted by the rich offer of Chirbury, con-"sented to surrender their right of electing the mas-"ters to St. John's College, Cambridge, of which "Ashton was a member; but they stipulated with "success for the condition that the college should be "bound to elect burgesses of the town." Was that an arrangement come to at that time ?—I take for granted it was so. On the face of that proceeding it bears such evident marks of being a compro-

SHREWSBURY.

Rev. B. H. Kennedy.

22 May 1862.

mise, like the Act of the last century, that I rather assume that such must have been the case. I wish rather to draw attention to this fact, that there has certainly been, from that time to this, a little uneasy feeling among some persons at Shrewsbury, who take a strong interest in the school, and at the same time have local attachments, with regard to their connexion with St. John's College. They endeavoured in the course of the last century to overthrow that compromise, but were not able to do so. The Court of Chancery first, and the House of Lords afterwards, set aside an election made here under the old charter, which has no doubt left some little uneasiness of feeling, even at this distance of time.

67. (*Lord Lyttelton.*) You say: "At the close "of that century, the evil of the burgesses' claim to "the masterships being patent and acknowledged, a "new compromise was made, resulting in the Act of "38 Geo. 3." The main features of this Act, you divide under three heads, and the third is, "The gift "of the right of gratuitous instruction to all sons of "burgesses." There are two points upon that, one with regard to what immediately follows: what is to become of that class, the old burgesses: will they become ultimately extinct: You say, "The "effect of this last provision has been greatly modi- "fied by the Municipal Reform Act of 1835, which "has produced, and must yet produce, a perpetual "diminution of the old burgesses?"—I have not sufficient data to say at what rate that class is diminishing. It can only be continued in a town like ours, by descent or by servitude, *i.e.* by serving an apprenticeship under certain conditions. There is a power, I am told, of becoming a burgess otherwise than by descent or servitude, but I am given to understand that practically it is hardly ever achieved.

68. Do you know what the actual number of existing burgesses, who have the right of gratuitous instruction to their sons, is?—I do not know; Mr. Peele could probably answer that question.

69. You know the number is diminishing?—Yes, no doubt it is; I have myself known many families who have left the town, and others who have died out.

70. Apart from any particular circumstances which might render a compromise desirable or otherwise, do you conceive that the burgess right which at present exists, is conducive to the interests of the school, *i.e.* the right of the burgesses to the gratuitous instruction of their sons?—My own impression is that it would be impolitic to disturb it.

71. I mean supposing, apart from particular circumstances, you had to constitute a *quasi* foundation of this kind, would you do it in that form?—If the question be put in that form, of course I should not wish that such a constitution should be made.

72. (*Mr. Vaughan.*) But is not the number very considerable at the present moment of boys who have gratuitous instruction in the school upon their right as the sons of burgesses?—In the school or in the town?

73. Of boys who have a gratuitous education in the school as the sons of burgesses?—At present the number is about 25.

74. About a third of the whole number of the school?—The whole number is 131.

75. That is about a sixth part?—Somewhere thereabouts.

76. (*Lord Clarendon.*) There are 25 boys who have the right of gratuitous instruction?—Yes; the number was 65 when I became Head Master. It has been less; it has been 13 or 14; of late it has rather increased, but not from an increase in the number of burgesses.

77. Do you attribute the diminution to the falling off in the number of burgesses?—Yes.

78. (*Mr. Vaughan.*) I wish to ask a question as to the "scheme." What is the relation of the "scheme" to the Act of Parliament?—I presume as far as the new scheme differs from the Act of Parliament it supersedes the latter.

79. How is it that a scheme framed by the Court of Chancery can supersede an Act of Parliament?—I can only say that the Lord Chancellor (Lord Cottenham) gave that power to the Trustees; it was a proceeding under Sir Samuel Romilly's Act.

80. Are there not provisions in the new scheme which override provisions in the Act of Parliament?—There are provisions in the scheme which override provisions in the Act of Parliament, certainly.

81. Was there any intervening Act of Parliament which gave a power to the Court of Chancery in that way to override a particular statute?—No; Lord Cottenham in that respect differed from the Vice-chancellor (Sir Lancelot Shadwell) who refused to sanction the scheme in the first instance, and dismissed the petition of the Trustees. I had to act with St. John's College. I felt it, after consideration, to be my duty to act with the college in that. I followed their lead in resisting the petition. In the first instance we were successful; Vice-chancellor Shadwell dismissed the petition. Then the Trustees appealed, and Lord Cottenham set aside the Vice-chancellor's decision, and sent the case to the master in Chancery to frame a new scheme.

82. Then in fact the Lord Chancellor decided that the Court of Chancery had the power to frame a scheme, some provisions of which should override the Act of Parliament?—He did. My counsel on that occasion (the present Vice-chancellor Sir W. P. Wood), told me, "I think you will be unsuccessful on "the appeal, for Lord Cottenham's feeling is to ex- "tend the power of the Court of Chancery as far as "possible." It was, in one sense, unfortunate for me that he took that view; I had to pay the costs of my unsuccessful opposition.

83. Do you know yourself the particular points in which the scheme has overridden the Act of Parliament?—I do not think I could lay my finger upon them without looking it through.

84. Could you if I point them out?—Yes; the exhibitions for instance.

85. Do you happen to know whether there is any conflict between the scheme and the Act of Parliament as to the surplus revenues of the school estate?—The plea on which the petition was brought forward was that of an existing surplus, and the Trustees asked the advice of the Court of Chancery how they should dispose of that surplus.

86. I find the Act of Parliament provides that the surplus (after the application of the revenues to certain purposes which are mentioned) shall be expended in the creation of new exhibitions?—That was urged on the part of the college; they contended that the Act of Parliament sufficiently provided for the disposal of the surplus, and so Sir Lancelot Shadwell held.

87. Do you know, as a matter of fact, whether between the passing of the Act of Parliament and the framing of the scheme any such surplus had been so applied?—Certainly.

88. It had been so applied?—Yes.

89. Do you know how many exhibitions have been created in that way?—I cannot say; probably Mr. Peele can. He would, no doubt, by reference be able to inform you. I know of one that was an exhibition created in honour of Dr. Butler at the time he left, it was 100*l.* a year, more valuable than the rest, and that, by the scheme, was cut down to a level with the other exhibitions. That was altogether originated in honour of Dr. Butler's name, and was higher than the others on that account.

90. (*Mr. Thompson.*) Was that confined to St. John's College?—No, it was open to any college in either university. Those that were created after the Act were not to be limited, and that was one.

91. They have not done so of late years?—There are two out of the six not so limited. One is called the Butler exhibition, which was 100*l.* per annum, and that has been reduced to 50*l.* per annum as well as the others. One object of the scheme was to improve the livings, a very desirable object, certainly; but it has sometimes occurred in the school that boys of very great merit have left the school without an exhibition of any kind. It has not occurred so much of late years, since the scheme was esta-

blished. It often occurred before that time because they could not be given.

92. (*Mr. Vaughan.*) Was it not the case before the scheme was framed, that, under the Act of Parliament, supposing there was in fact no one fulfilling the conditions which limited the exhibition to particular persons, no other boy in the school would be elected to such an exhibition?—Supposing there was no one coming within any of the different categories an election could not be made.

93. But it would have gone towards forming a fund for the creation of new exhibitions?—It would.

94. But would those new exhibitions have been in the discretion of the Trustees applicable to the scholars of the school generally?—No.

95. They would not have been?—No.

96. They would have been subject to the same conditions as the old exhibitions?—Yes.

97. Then under the Act of Parliament there would have been no strictly open exhibition in the school?—None on the foundation. Since that time the Careswell Trustees have opened their exhibitions, and the good effects of that have already been shown. Lord Powis is one of those Trustees.

98. What are they Trustees of?—An estate left by Mr. Careswell for certain Shropshire schools.

99. Is the scheme acted upon in all particulars now?—Yes, generally.

100. For instance, the scheme prescribes that the scholars of the school shall be examined?—There have been no such examinations.

101. That examination has not been held?—It has not.

102. May I ask the reason why it has not been held?—It has not been called for by the Trustees and I have not called for it.

103. You have not thought it expedient to call for it?—I have been satisfied without it.

104. (*Lord Lyttelton.*) The bishop has not called for it?—The bishop has not called for it; no one has called for it. It did not lie on me as a duty to call for it.

105. (*Mr. Vaughan.*) Supposing that examination had taken place would it not have had this ult,res that candidates out of Shrewsbury school who were not the sons of burgesses might have been elected in the order of merit?—If there were no son of a burgess competent to go to college, in the opinion of the examiner, others would be chosen.

106. Candidates not being the sons of burgesses might have been elected in default of those who were?—And in default of those coming within the other categories, *i.e.*, there being none from Chirbury and so on. I have never known an instance of a claimant born in Chirbury parish. Boys born in the county often appear.

107. In default of candidates coming within those three conditions, boys would have been elected to exhibitions in the order of merit?—I presume so; it would have rested with the Trustees which of the boys should be elected, if it were so.

108. As a matter of fact, has there been commonly a default of persons who have fulfilled those conditions?—There has been commonly a default.

109. May I ask what has been the number of exhibitions which have been vacant each year, and would have been vacant if there had been such an examination?—They vary very much; I should think that since the scheme in all probability there has been an average of two exhibitions every year, which have been given to boys according to merit determined by the school examination.

110. Which, supposing the examination prescribed by the scheme had taken place, would have been given according to their merit in that examination?—Yes.

111. On what principle are they now given?—Entirely on my responsibility; but the boys perfectly well know that they are open to challenge.

112. The scheme prescribes that an examination shall be held, and the order of merit stated, and that the boys shall be elected according to that order of merit; how is it possible to do that if there be no examination; how would it be possible for those boys elected to prove to the college that they are the most meritorious candidates that could have been sent up?—There is an accurate examination of the sixth form, and the boys are placed in the order of merit in that examination.

113. Supposing another boy were to say, "I feel "myself entitled to the exhibition as being the "superior scholar," may I ask what course you would pursue?—I should at once request the Trustees to institute an examination.

114. But as it is, the practical decision rests with you?—It has been done in this way: the boys have come to ask my advice, or have agreed among themselves, and I have stated to the Trustees, "Such and "such boys are candidates." I have given the names when the time for the election came, and said, "Such "and such boys are candidates; they alone have "presented themselves for the exhibition, and in my "opinion they are qualified."

115. The boys consult with you in fact before they offer themselves as candidates?—They may do so or they may not. They may offer themselves without any consultation at all. They may simply tell me they mean to be candidates.

116. And in that case you would say whether you considered them qualified or not?—Any boy who offered himself for anything he had a right to claim would be accepted by me as a candidate.

117. And supposing several boys were to offer themselves more in number than the exhibitions to be filled up, how would the selection be made?—Certainly, in that case an examination would necessarily be made. I would not in that case take upon myself to decide upon the merits of the candidates.

118. (*Lord Lyttelton.*) Referring to answer 13, Part III., I should wish to know what it was that took place in 1840. You say, "Only once so far "back as 1840 has any contest for an exhibition "taken place at the school"?—It was the second election for the Butler exhibition, and as far as I recollect two boys presented themselves as candidates; one was a few places below the other in the lower sixth form, and I declined to adjudicate upon their merits, and begged that there might be an examination, and an examiner was accordingly appointed, and an examination was held.

119. How was the examiner appointed?—I rather think I appointed him myself; he was a Cambridge man I know.

120. Apart from the intention of the scheme you say the ordinary course is that no more than a sufficient number of boys to fill the exhibitions offer themselves as candidates for these exhibitions; do you select these boys according to the order of merit in the school examination?—I can hardly use the term "select." The boys know each other's strength. Take, for instance, the boy who got the exhibition last October twelvemonth. There was no boy in the school who would have thought of offering himself to compete with that boy.

121. But the scheme was framed, I presume, with reference to these very exhibitions; the scheme, therefore, intended that they should go by examination?—Certainly, and virtually it is so now; indeed, actually, because it is by looking to the school examinations that they test each other's strength and know each others strength.

122. (*Lord Clarendon.*) Has any boy offered himself whose strength was proved to be superior to the one who was appointed to the exhibition?—It may have happened. A few years ago there were, I thought, four candidates for three exhibitions, and I intended to request the Trustees to appoint an examiner; but before the time came the boys talked the matter over among themselves, and one of them withdrew his name. Three candidates alone presented themselves, and in that case all I had to do was to notify to the Trustees that there were three candidates for their three exhibitions.

123. (*Lord Lyttelton.*) Are you aware of an exactly similar system being in force in any other school?—It is not at all enforced in this school.

SHREWSBURY.

Rev. B. H. Kennedy.

22 May 1862.

124. I mean adopted?—It has been a matter of surprise to me, and the only pleasurable light in which I have regarded it is that it seems to show the confidence which the boys place in the result of the school examination.

125. (*Lord Clarendon.*) The fact is that the school examination is an examination for the exhibitions as well?—It brings out those boys who are fittest to take the exhibitions.

126. (*Mr. Vaughan.*) Is the result of the school examination known in the school always?—Certainly.

127. And is it an invariable rule in fact that the boy who stands highest in the school examination is selected for an exhibition?—They offer themselves; they are not in any way selected by me.

128. Has it ever happened that a boy has proved himself superior to all in an examination at the school and not offered himself as a candidate for the exhibitions of which we are speaking?—It may very well happen that the boy so supposed does not go up that year.

129. Does it happen that the boys offering themselves as candidates for exhibitions have not been the first set in the school examination?—Certainly, if they happen to wish to go up at that time, and others not to wish it.

130. (*Lord Lyttelton.*) I think you referred to half-yearly examinations?—Yes.

131. (*Mr. Thompson.*) Is there any difficulty in adjudicating upon the claims of the different classes of boys preferentially?—As between a burgess's son and any other Shrewsbury boy, the claim of the former would be considered preferential. Of course if there were a burgess's son a candidate for an exhibition he must be qualified. That happened within the last few weeks with regard to a Careswell exhibition. The boy was examined by an examiner sent by the Dean of Christ Church, and he proved himself competent, and he took it by his preferential claim.

132. (*Mr. Vaughan.*) Am I to understand that the scheme provides not for awarding any other exhibitions than those six which stand first in the list?—It provides for those only.

133. The others are not provided for?—They are not.

134. (*Mr. Thompson.*) Supposing it happened that a Shropshire boy was superior in the school examination to a burgess's son, would the burgess's son in all cases have the preference?—In all cases if he were competent. In some cases I have refused to certify competency. It is rather an invidious thing to do. I did so soon after I came here in a case in which one of the present Trustees, who highly distinguished himself at the University, obtained the exhibition. He was a burgess's son, but he had not the burgess claim because he was not born within the liberties of the borough, and therefore could only claim as a Shropshire-born boy. Another boy was put forward as a candidate who would have had a preferential claim; I think he was in the lower fifth form; and I refused to certify competency in his case. I believe the course I took was generally approved; of course there were some who did not take the same view.

135. (*Lord Lyttelton.*) There is no provision in the scheme that they must be in the sixth form?—I am not sure whether in the Act of Parliament there is not a condition of having been two years in the "head form." It is a vague term. I am not sure whether that is not so.

136. (*Mr. Vaughan.*) I see there is a provision in the scheme for the opening of all exhibitions other than those six which have been mentioned, to all colleges and halls in Oxford and Cambridge?—That is, all that shall hereafter be founded by the Trustees.

137. It says, "That all exhibitions other than the "two that were founded in the year 1656, and the "four which were founded afterwards, but before "the passing of the Act of Parliament for the better "government and regulation of the said school, "which exhibitions respectively have been hereto-"fore limited to St. John's College, Cambridge, shall "be opened to any college or hall in either of the "Universities of Oxford or Cambridge"?—That only refers to the funds at the disposal of the Governors and Trustees, not to any of these funds which, like Dr. Millington's, are under trust.

138. Has that clause in the scheme had the effect of opening any?—They have not founded any new exhibitions, nor apparently are likely to do so. They have cut down the exhibitions and scholarships to six at 50*l.* per annum each. The Trustees intended to create a building fund, I do not think they had any idea of founding new exhibitions.

139. In fact there are at present no exhibitions, so far as you are aware, upon which that particular clause can operate?—No exhibitions at present; there are two which are open to any college in either university.

140. (*Mr. Thompson.*) Of small value?—No, they are all equalised.

141. (*Mr. Vaughan.*) Do you happen to know where they come in this list?—They are the two held by Moseley and Batten. They are at Balliol. Oswald Smyth's is also open. Careswell's and Millington's are quite distinct from the others.

142. Is Taylor's exhibition open?—That is for either university. Unfortunately that is in a peculiar position, the fund is lost but the interest continues to be paid.

143. Does your eye fall upon any in this list that have been liberated by that clause?—None that have been liberated by that particular clause.

144. Then the clause has been inoperative?—I rather think it only agrees with the Act in that respect; that is my impression.

145. (*Lord Clarendon.*) What is the exhibition of which the fund is lost and the interest remains?—It is Dr. Taylor's exhibition. There was a defalcation for which, I believe the late Canon Newling of Lichfield was responsible—I think he was surety for the party, or that he was responsible for it; and his widow has been allowed ever since to pay the interest of the money without being called upon to replace the principal.

146. What will become of that when the widow dies?—That is a question. I found it had been the case in Dr. Butler's time. The Mayor of Shrewsbury and the Head Master of the school are the trustees of the fund, and I do not know what we ought to do in the matter.

147. Is Mrs. Newling the widow alive still?—The widow is alive and still pays the interest.

148. After her death no one will be responsible for that interest, I suppose?—I fear not; Mr. Peele is aware of it.

149. What does the interest amount to?—Only 23*l.* a year.

150. (*Mr. Vaughan.*) I suppose in consequence of an examination not having taken place the sum of 15 guineas which is provided for the examiners by the scheme has never been paid?—It has not.

151. Has the provision in the scheme with regard to the playground and the library been acted upon?—I have continued to pay the rent of the playground.

152. How do you interpret that clause. Is it not compulsory on the Trustees?—I do not know whether it is compulsory or not. Nothing has been done with regard to the playground. As to the library, there has been some little money laid out in cleaning the pictures and washing the room, but nothing with regard to providing books or instruments. With regard to prizes the Trustees have it in their power to give 50*l.* a year in prizes; they have given 25*l.* I have not been dissatisfied, it is as much, I believe, as they can afford.

153. (*Mr. Thompson.*) Do you pay the stipends of the assistant masters?—Of the new masters I have appointed, I do; but I do not complain in the least of that; I have been here 26 years, and am not so strong as I was, and if I appoint new masters to give me a little relief, it is a matter for my own consideration. But if that be considered, certainly the fee of 15 guineas each boy would be totally absorbed in the salaries paid.

154. (*Lord Clarendon.*) Each boy not a free burgess boy pays 15 guineas?—Yes.

155. And a free burgess boy pays nothing?—No. In certain cases I make it a question with the masters whether they will think it proper to remit the fees, and they are always very happy to do so. I would never, if I could help it, permit a boy to leave the school under those circumstances. I think it right to say that because it is not my sole act; I should be taking the credit which belongs to others, if I did not say it is the joint act of all the masters.

156. To remit the fees for a non-burgess boy?—Yes; such cases will occur. Take for instance the case of a clergyman who has died here and left a widow, whose entire income since the husband's death is not more than 100*l.* a year. When the husband was alive his living enabled him to pay for his son, since his death the widow has had only that small annuity and we have been happy to remit the fees. Those are circumstances which will occur. We talk it over among ourselves and agree to do it, it is the act of all, not the act of one.

157. (*Mr. Vaughan.*) Am I right in supposing that the sources of income of the under master would not make his salary more than about 500*l.* or 600*l.* a year?—I should think that is about correct.

158. I have made it out 562*l.*?—I should think it was very nearly about that; he has 2*l.* 12*s.* 6*d.* capitation fee upon about a hundred boys.

159. And he has boarders?—I think he has six.

160. With regard to the Senior Assistant Master, his income would be a capitation fee of 1*l.* 5*s.*, and a salary of 100*l.* per annum, about 225*l.*?—About that, I think.

161. The mathematical master, his income would altogether be 340*l.*?—Yes, because he has been disposed to give occasional lessons.

162. May I ask to whom those lessons are given: Is it to boys in the school or in the town?—If any parent has wished his son to take extra private lessons either in mathematics or classics, or composition, or anything of that sort, I have not objected. It has been an innovation upon me by parents; they have pressed me to do so.

163. That is lessons given to boys of the school?—Yes; but it is essential, and it is carried out, that no assistance be given to them in preparing their lessons for the school.

164. The same thing, you say, applies to one or two masters?—Yes; I think Mr. Fisher, the mathematical master, has had the lion's share of private teaching; and Mr. Calvert, who is henceforth to act as tutor in the school, has had a fair share of private lessons; Mr. Carr has been in the school too short a time.

165. (*A Commissioner.*) The first assistant master's income is not more than 225*l.*?—The Rev. Henry Greenwood is the first assistant master, and he has a salary from the Trustees.

166. The second assistant master, I make out that his income is about 200*l.* per annum, *i.e.* 100*l.* capitation fees and 100*l.* salary?—Yes, it would be about that.

167. The third assistant master, called here the mathematical master, I make out that his income is about 340*l.*?—In consequence of taking private pupils.

168. (*Mr. Vaughan.*) The French master, I find, takes boarders also?—Yes, Mr. Bentley, not being a foreigner, but having been educated abroad chiefly, and having a great aptitude for languages—a very able, active man indeed—came to us at the age of twenty-one and has always been incorporated with us in the school.

169. And his income is about 340*l.* per annum?—I daresay it is; he is a married man.

170. A layman?—Yes.

171. And the income of the writing master is 125*l.*?—Yes, probably, but he supplies the school with stationery, upon which he has a profit.

172. At what point of academical standing and attainments are you able to procure masters at these salaries?—It depends upon circumstances, sometimes there are plenty to be had, and sometimes it is very difficult to get a good master.

173. Do you take them very young, immediately after their degree?—Yes; there is Mr. Carr of Christ's College who was in the classical tripos of this year; he has just joined us.

174. Are you able to work the school satisfactorily with the means those salaries put at your disposal?—Yes, I think I am, certainly; I should of course be very glad to increase them. We have been very differently constituted, and consequently have not been able to obtain men of such first-rate university distinction, (and, therefore, I presume, of such first-rate ability,) as Harrow and Rugby, where they can offer houses and the profits of houses; we have not been able to do that, but we have been at no loss for good masters. To take the case of Mr. Calvert, for instance, a most able person; he did not take the place in mathematics, which would enable him to go out in honours, otherwise he would probably have come out very high in classics, and have obtained a fellowship at Cambridge. He missed that, and in consequence came to us. He has gained the position of an excellent scholar and an efficient master.

175. Do you think you have been as efficiently co-operated with in procuring distinctions for Shrewsbury school by the masters you have been able to procure as you might otherwise have been?—Yes; the gentlemen who come here do not look upon it as anything more than a fellowship at the university; they have about the emoluments of a moderate fellowship at the university; they have their rooms and dinner commons, and are looked upon by me as friends.

176. Has that led to a very frequent change of masters?—It has not; not of late years.

177. (*Lord Clarendon.*) Upon the whole you have no serious difficulty in procuring masters?—No.

178. (*Mr. Thompson.*) Are the greater number of masters married?—No; they take a mastership as a bachelor appointment, with a bachelor income, exactly as they would take a fellowship at the university. Mr. Calvert's is a curious instance. He had a wish to marry, and a college friend of mine wrote to ask if I had any man I could recommend for a colonial school in Trinidad; I offered it to Mr. Calvert, he took it and went to Trinidad, but his wife died in a year; he came back, and the gentleman (an old pupil of my own) who had filled his place was going to take a tutorship in his college, and he said, "I know you would like to have Mr. "Calvert back; I shall not stop longer than this "half-year, I will vacate my mastership now;" and Mr. Calvert came back and resumed his place.

179. (*Lord Lyttelton.*) I understood you to say Mr. Bentley was a married man?—Yes.

180. From what you said I inferred that the French mastership and the second mastership are the most valuable ones here, those Masters being able to be married men?—Yes, that is so certainly.

181. Mr. Bentley makes nearly 400*l.* a year?—Yes.

182. (*Mr. Thompson.*) Is it not a rule that if fellows of a college are appointed to a first or second mastership they vacate their fellowship?—At St. John's College it vacates a fellowship.

183. Only at St. John's?—If St. John's were to elect a fellow of Trinity College to be Head Master I should fancy he would not vacate his fellowship.

184. Is it not so in the Act: "That every person "so admitted in manner and form aforesaid to the "place of head master or second master of the said "school, shall, within 12 calendar months after his "being so admitted to such place, vacate any fellow-"ship which he or they may hold or possess in either "of the said universities"?—There it is so. They wished to have married men.

185. Mr. Rigg, the second master, has lost his fellowship by the operation of the Act?—Yes.

186. (*Lord Clarendon.*) The position of the French master, his *status* in the school, is quite the same as that of the other masters?—Yes, we have so valued him from the time he came. I saw his value very soon, and we have always treated him as one of ourselves.

SHREWSBURY.

Rev. B. H. Kennedy.

22 May 1862.

187. Does he wear the same dress?—No he is not a university man and therefore he does not do that. The Bishop of Lichfield offered to ordain him if he wished it, but he himself did not wish it.

188. And in manifestations of respect he is in the same position?—Yes, certainly.

189. And he takes the same position?—Yes, he acts as secretary for the school discipline; he has 50*l.* a year more for taking that duty.

190. Does he teach anything else than French?—French is the only modern language publicly taught in school, but he teaches German to private pupils.

191. Is he an Englishman?—Yes.

192. Where was he educated?—He was educated at Paris, and at Baden-Baden.

193. He speaks good French?—I do not pretend to be a judge of French pronunciation, but I should say he is a very good French scholar for an Englishman, and a still better German scholar.

194. (*Lord Lyttelton.*) The payments made to the Head Master and the under masters are all stated, are they not?—They are all stated.

195. Have all the assistant masters, to find their own houses; do they do the best they can for themselves as to that?—Mr. Bentley finds his own house. The new master, Mr. Carr, has lodgings; the others have rooms provided for them. The reason I did not distinguish these cases before, is that all these things are matters of arrangement.

196. Do the others lodge within the school premises?—The Commissioners have seen those apartments. Mr. Greenwood, the first assistant master, is in one, and Mr. Fisher, the mathematical master, in the other; Mr. Calvert lives in my junior house, and takes the discipline of that. Mr. Bentley has a house of his own. Mr. Carr is the only one who is obliged to take lodgings.

197. Do the four senior masters dine in your house?—Mr. Greenwood and Mr. Fisher dine in my senior hall; Mr. Carr comes to dine with Mr. Calvert in my junior hall.

198. (*A Commissioner.*) What are the salaries paid by the Governors and Trustees; I see "Capitation "fees and grants marked * are paid by the Head "Master; the other salaries by the Governors and "Trustees"?—Certain salaries are paid by the Governors and Trustees, not all the salaries.

199. (*Lord Lyttelton.*) Those are paid by the Governors and Trustees because they choose to do so?—They are required to do so by the scheme.

200. Do they pay any more than they are required to pay by the scheme?—No.

201. (*Lord Clarendon.*) "One (master) is now "appointed as tutor for all boys below the sixth "form, and to direct the studies of the non-collegiate "boys." What are the duties of the tutor?—It is a newly constituted office, and we have really all this under consideration at the present moment. It will hardly be brought into operation until next half-year.

202. What do you contemplate?—What is contemplated is, that he should communicate with the other masters, and be fully aware from them of the character and powers of the different boys in each form, so that whenever any master thinks it desirable to recommend that any boy in his form should be overlooked out of school, to see he does his own exercises; or that, being deficient in a particular department, he ought to be made to work more; he should be put upon a list to be instructed out of school by Mr. Calvert, who will in that way act with the master, who should be required to attend at certain times for that purpose. It will be in fact, the complement of the school work. It will stand in the place of the private tutorial system of other schools.

203. Does it bring the boys more under *surveillance*?—To a certain extent. We have never found at Shrewsbury that a boy who is able and desires to do himself justice in the school needs any assistance out of it, but we quite admit there will be boys in this as well as in all other schools to whom such assistance may be desirable.

204. (*Mr. Vaughan.*) You had considerable experience in another school before you came to Shrewsbury?—Yes; at Harrow.

205. And in that school the tutorial system prevails?—Yes.

206. But from your experience at Harrow, you were not disposed, when you came here, to introduce it at Shrewsbury?—No, I should not introduce it here; there were many reasons which would have prevented me. What I found at Harrow was that the real active work done was done by the private tutor rather than by the master in the school; and it was inevitable such should be the case, at least below the sixth form. The active work was done by the private tutor; and as private tutor I could not get my pupils to read for their private lessons, except some of the higher ones, who were reading for scholarships, or other examinations. The boys, in general, did not want their private tutors to do anything else than construe their lessons and correct their exercises for them. That was the general rule in those days.

207. (*Lord Clarendon.*) You are speaking of Harrow?—Of my six years' experience of Harrow.

208. (*Mr. Vaughan.*) Apart from the question of expense, from your experience of the working of the system at Harrow, should you have been disposed to introduce here the system to which you refer of the private tutor assisting the boy in preparing his lessons for school?—No, certainly not.

209. With regard to exercises?—The system which existed there was for the private tutor to look over the boys exercise, which was afterwards to be sent in to the master in school, and (unless indeed, it had more than minor faults), to correct it himself.

210. Will you point out the ill effects which prevailed in the tutor's correcting the exercises?—I think it made the form master feel he was a mere cypher; at least I felt so; that I was looking at the exercises of other masters and not at the exercises of the boys. I also felt great delicacy in dealing with a boy's exercise, because if I saw blunders in it I knew I was correcting the blunders of a colleague and not of a boy.

211. Supposing another provision to be made by which the master should see both the original and the corrected exercise, do you think anything would be gained by that?—I have understood that that has been done of late years at Eton. I should say that that certainly is an improvement.

212. But do you think it gains anything positively?—I should still think it was a cumbrous mode.

213. (*Lord Clarendon.*) You say the same gentleman is to "direct the studies of the non-collegiate "boys"?—That is an attempt I have made of late years to satisfy that sort of call which exists, and not unnaturally exists, among the community, for an education which shall meet the wants of those classes who do not intend to send their sons to the universities. I call it a "non-collegiate" class because I have never allowed the word "commercial" to enter in among us.

214. Those boys you have reason to know do not intend to go to the universities?—We have; their parents are the persons who decide.

215. (*Lord Lyttelton.*) Will you describe what that non-collegiate class is?—The arrangements I consider to be very incomplete, certainly. If we had a sufficient number of boys, *i.e.* of paying boys, of course we ought to have a master named specially for that class. That we have not been able to achieve; the number is only 18 or 20. They are incorporated with the school generally; they take their status in the school according to Latin; they stand in the form and do all the Latin lessons of the form in which they are placed; but when the Greek comes an arrangement has been made between the different masters so to order their lessons as that these boys when their own form is doing Greek shall go to the master of another form to do something else which is different, *i.e.* not Greek. So their exercises are no longer Greek or Latin verses, or any classical composition whatever.

216. Do they omit Greek altogether ?—They omit Greek altogether.

217. And all kinds of Latin composition ?—All kinds of original Latin composition.

218. At what age are they allowed to begin ; would you take a boy upon those terms from his first admission to the school ?—Yes.

219. On his first admission, if his parents wished it, and said he was not intended for the university, you would take him on those terms, *i.e.*, that he should do all the ordinary work except Greek and classical composition ?—Yes.

220. And in place of that you substitute modern languages ?—Yes; also history, English composition, and some little more of mathematics. Of course if we had it completely in the curriculum of work we might use a more sounding term and call it a "physical science" class, but it would be mere quackery to use that term now.

221. (*Lord Clarendon.*) You say there are about 18 or 20 non-collegiate boys now in the school ?—Yes.

222. Are all the rest intended for the university ?—No ; but their parents are willing or prefer they should follow the usual course.

223. Although they are not going to the university ?—Yes.

224. How long has the non-collegiate system been in existence ?—About five years.

225. Long enough for you to be able to judge of the result ?—I think it works tolerably well ; I have no ground for dissatisfaction with it except that the numbers have not been large enough to give it a fair trial. I think we can hardly say there has been a great success, but on the other hand I cannot say it has been a great failure. I think the boys have a fair education.

226. And the boys in the professions which they devote themselves to will be tolerably prepared?—Yes.

227. (*Lord Lyttelton.*) Do the boys share the privileges of the other boys ?—Yes. There is one boy, the son of a solicitor in the town. His father sent him with a view to his going into his own office, as a non-collegiate boy, but he showed so much talent that he rose to the top of that class, and also got so good a place in Latin, that at the end of last half-year he came and said, very wisely, "I am sorry I became a "non-collegiate boy ; I should like to learn Greek ;" and he is now learning Greek to be able to come into the sixth form.

228. In what part of the school is he ?—He is now at the head of the fifth form ; he is reading Homer (the Odyssey) with Mr. Calvert, and I have no doubt that after Christmas, all being well, I shall be able to take him into the sixth form.

229. (*Mr. Vaughan.*) Had he learnt Greek before ?—No, he knew no Greek at all. I have not seen the boy lately, but I am sure Mr. Calvert could give you some valuable information about him.

230. (*Lord Lyttelton.*) Then I understand that a non-collegiate boy would be able, if his parents wished it, to join the other classes in the school ?—Yes, he would if his wish plainly appeared ; but it is easier to transfer a boy from a collegiate to the non-collegiate class than the reverse. But this is quite an exceptional case.

231. Have you had any reason to suppose that boys of the non-collegiate class are looked upon by their school-fellows in any different way from the rest ?—Certainly not ; there are one or two of them who are remarkably intelligent boys. I think a few put themselves on merely from idleness. They are the idle boys of the school.

232. (*Mr. Thompson.*) Are any in the sixth form ?—No, they cannot be in the sixth form.

233. They cannot exercise any monitorial authority ?—No ; but such boys have the chance of exercising other authority, as captain of the cricket or foot ball.

234. They cannot be præpostors ?—No.

235. (*Lord Lyttelton.*) You say it has worked tolerably well upon the whole, in what respect has it not worked quite well ?—I do not know that it has not ; I do not know that we have anything to complain of. It is, perhaps, rather an inconvenient way of conducting things to hand boys over from master to master. It is something like the Scotch class system.

236. You do not think it has injured the school in any way ?—No, certainly not; a class of boys will always exist in every public school, viz., the active boys, with whom play is the great end and object, but who, nevertheless, do not wish to fly in the face of the master, and therefore wish to give him general satisfaction. They are a very valuable class of boys when their principles are good, *i.e.* if they have a good moral character and are respectful to their masters, and wish to set an example to the other boys. They are a very peculiar and a very good element in a public school.

237. (*Mr. Vaughan.*) How do you find teaching Latin without Latin composition act upon the power of acquiring Latin, *i.e.*, the power of understanding authors ; do you find it retards them ?—I have not been in the habit of teaching those boys ; I am not able to answer that ; Mr. Calvert I have no doubt would tell.

238. (*Lord Lyttelton.*) The tutor gives special assistance to boys below the sixth form if they require it ?—It is so intended ; I cannot say it has come into action. It is quite recent ; Mr. Carr could only join us after the classical tripos of this year.

239. It is a thing which has not been tried ?—It is being tried only this quarter.

240. (*Lord Clarendon.*) A few years ago there was no special master for mathematics, was there ?—No ; there was no special master for mathematics until about three years after I came.

241. Were mathematics not taught ?—Yes ; they were always taught, but there was no special master for them, and they were not essential.

242. Did not they stand a boy in good stead in his examinations ?—Yes ; they always formed a part of the Head Master's examination, but I think they did not form a part of the examination of the other classes, I rather think not ; I think a boy learnt mathematics only as he learnt any other accomplishment.

243. It was not part of the curriculum ?—No.

244. (*Mr. Thompson.*) Now it is strictly so ?—Yes ; so is French.

245. It does not seem to trench upon the boy's progress in the school ?—No.

246. There is a different organization of the French department ?—Yes ; so far it is not part of the curriculum ; it is simply that every boy must learn French ; it does not enter into our examinations for rising in the school, because if it did, we should be frittering away our power.

247. (*Lord Lyttelton.*) You incorporated French on your coming into the office of Head Master, before the new scheme required it ?—Yes ; I did it voluntarily.

248. Is French compulsory upon every boy in the school ?—All but the præpostors. I wish them to concentrate themselves upon their class work, and therefore I do not require it.

249. What number of præpostors is there ?—Twelve is the nominal number. We never deprive a præpostor of that rank even when he is beaten in examination. We require a difference of 20 marks to change the place of a præpostor, 50 marks, that of the head boy.

250. Is there any minimum age for a præpostor ?—No ; none at all.

251. Does it often happen that a boy may be a præpostor for twelve months before leaving school ?—Sometimes much longer. Holmes, of St. John's, was a præpostor, I should think, for three or four years. I myself was a præpostor for three years.

252. With respect to French not being compulsory on the præpostors, do you not find that to be prejudicial to their keeping up their knowledge of French ?—I suppose it would be to a certain extent. It

SHREWSBURY.

Rev. B. H. Kennedy.

22 May 1862.

is very rarely such a case occurs. It might very well happen to a boy who rises rapidly in the school; but I should recommend a boy who was so circumstanced (I think there is one such boy) to keep up his French.

253. (*Mr. Thompson.*) I think you say other boys read German with you?—They have done so occasionally, when the sixth form was very strong.

254. Have you introduced any books in standard French literature?—I do not think so; I should think we have nothing to boast of at all, with regard to French literature. Mr. Bentley will be able to answer the question. I have no ground to say so. I have had boys sometimes who have made a little start with me in German, and they have been very glad to have a few lessons and have afterwards carried it on. Some have become very good German scholars.

255. (*Lord Lyttelton.*) You have not found that attention to French, in the other forms, has interfered with their classical studies?—No; they have only two lessons a week of about an hour each.

256. (*Lord Clarendon.*) It is said in the same answer, "the number of classical masters has necessarily varied with that of boys; there has been on "the average one such master for 30 boys." You consider a classical master is quite able to teach 30 boys?—Yes, I think a classical master who does his duty is quite able to do so.

257. Supposing there were funds to appoint a larger number of masters, should you like to reduce the number of boys?—I should like to do it if it be possible. I can teach 20 myself. Sometimes one finds the exertion a little oppressive, especially as one gets older. I think from 20 to 25 is a better average.

258. (*Lord Lyttelton.*) In your scheme, which is a sort of model for a school, you allow eight masters for 230 boys, which would be about 30 to each master?—Yes. Different modes of teaching must be adopted in different forms.

259. Have you any observation to make as to the government of the school?—With reference to the government of the school, St. John's College has the appointment of the Head Master, and is not represented in the Board of Trustees; and I would suggest that it would be very advantageous to the school if it were so represented, *i.e.*, if the college had the right of appointing two or three of the Trustees.

260. As part of the governing body?—Yes; if the governing body, instead of being entirely self-elected, were partly self-elected and partly nominated, so that the college and the town should both be represented. It is a feeling I have long entertained, and one which, I think, may reasonably be entertained, that a representation of those two bodies, St. John's College and the town, would be a very valuable element in the governing body.

261. Do you conceive the governing body to be virtually self-elected?—They are certainly self-elected. I have no doubt they elect most conscientiously.

262. You would have three of the body nominated by the corporation?—Yes, but in the nomination of those three I take it for granted they would select them from the chief members of their own body, the aldermen for instance. I merely throw that out. I think if there were three Trustees to represent the college and three to represent the town, it would conduce to a better feeling between the several bodies. At present the college has great patronage here without any representation.

263. With regard to the direction of the studies of the school, it is quite clear, that by the Act, it is absolutely in the Head Master?—Yes, except so far as the scheme has modified that.

264. As to the under masters, have you any definite system with regard to consulting them as to the studies of the school?—No; they sup with me every Saturday evening, and we talk over the affairs of the school.

265. (*Lord Clarendon.*) To go back to the previous question, in what manner would you propose that St. John's College should be represented; would you alter the mode by which the Trustees are now elected?—I was merely supposing a certain state of things. Supposing the Trustees to be 12 or 13 in number as now, that St. John's College had the nomination of three, that the town had the nomination of a certain number (I will not say how many) and that the rest were to be elected by the old body, *i.e.*, self-elected; I think that that element of the college trustees and the town trustees giving their votes equally with the rest would be a valuable element in the governing body.

266. (*Mr. Thompson.*) Do you think three would be a sufficient representation for St. John's College?—I merely suggest that number. It would not give them a domination, and I should think that undesirable, in fact it would be opposed with such bitterness that it would be impracticable.

267. It would not be a very popular measure to the town?—No, probably not.

268. (*Lord Clarendon.*) Would it not be better for the Master of St. John's to be a member of the body himself than to be represented?—He could not very well attend their meetings; it is merely upon that ground I say "No," upon any other ground I should certainly say "Yes."

269. (*Mr. Thompson.*) Have they several regular meetings?—They have four quarterly meetings, the others are at discretion.

270. (*Mr. Vaughan.*) You as Head Master, I suppose, are cognizant of all the books which are used in all the forms, and the kinds of composition that are done, so that you know what books are used, what authors are read, and what compositions the boys are doing?—Yes, I must have that knowledge because the boys come regularly under my supervision from time to time.

271. Do you consider that the organization of the work in such a manner as to help the progress of the boys is assisted by the fact that it does not depend upon each master of a form what books he shall use, but upon some authority superintending the whole?—I should think the latter was upon the whole desirable, that the work of education should be guided by one mind mainly, but that it would be a very unwise one that did not take the advice of the other masters.

272. I do not ask you in the first instance who it should be who should settle it; whether it should be the Head Master alone or consulting with the body of masters. I ask should it be somewhere settled how the work of each form should be arranged, and what the books should be; so that it may not be left to each master, teaching his own form, to determine what kind of work should be done or what kind of exercises should be used?—I think you state the view I should take.

273. (*Lord Clarendon.*) You say the masters have generally been university men?—All of them except the modern language masters; generally, too, they have been clergymen.

274. In looking out for a new master do you endeavour to get a clergyman?—I hardly ever do get a clergyman to begin with, but the Bishop of Lichfield is good enough to take the mastership as a title for orders. They are very glad to take orders generally.

275. (*Lord Lyttelton.*) Has the bishop always done that?—He has always taken the mastership as a title.

276. (*Lord Clarendon.*) Is there any reason why you prefer a clergyman; or why the masters should go into orders, as regards the school?—We have, as you are aware, the whole of the service in chapel every Sunday afternoon, and a portion of the prayers in chapel every morning (except on Sundays, when the early morning service is in the great school), and therefore it is, to say the least, very convenient to have more than one clergyman; it may happen that one is not quite well, and another may take it for him; possibly other reasons may exist.

277. You say that the head or second master could be removed; should that be by the bishop or the Trustees?—No; it is a freehold office, from which the Trustees cannot remove without cause shown, any more than from any other office; it is so provided by the Act of Parliament.

278. (*Lord Lyttelton.*) You say, "I suppose that "the head or second master could be removed for "good cause with the approbation of the Bishop of "Lichfield"?—I was not at that time referring to the terms of the Act of Parliament.

279. There is no doubt about it?—No.

280. The bishop is bound to hear the cause alleged and decide upon it in a judicial way?—He is.

281. (*Lord Clarendon.*) You say, "Pensions are "mentioned in the Act but not in the scheme." What pensions are these: are they for superannuated masters?—For retiring masters on the foundation.

282. (*Mr. Thompson.*) You say they have never been given?—Yes, there was one given at my instance: twelve years ago one of our masters had the misfortune very suddenly to lose his reason, he had been an assistant master a considerable number of years, his circumstances were found to be not flourishing, he had to be sent to an asylum, some friends of his had interested themselves and concurred with me in doing everything to arrange his affairs, and in getting everybody else to do something; we asked the Trustees for aid, and they voted a pension of 50*l.* a year; he did not live long, he died from congestion of the brain shortly afterwards. I think pensions are mentioned in the Act.

283. You say, "Sons of burgesses, whether "boarders or day scholars, would be exempt from "tuition fee, all others are liable to pay it; but the "masters occasionally remit it voluntarily, especially "in favour of the sons of local clergy with small "means." That is just such a case as you have alluded to?—Yes; the gentleman in question was not a local clergyman, but a clergyman who, I have heard, was allowed to be absent from his living; but in general it would be so, no doubt.

284. (*Lord Lyttelton.*) It was the act of yourself and the other masters?—Yes, and I wish it to be understood that it is not my sole act and deed, every master foregoes something, and therefore every master has a right to be consulted in the matter.

285. (*Lord Clarendon.*) No. 18 relates to the school bills?—That relates to the bills which are afterwards given.

286. You say, "Additional tuition is sometimes "allowed, when much needed, but the instances are "few." That about the additional tuition I suppose you consider you have already answered?—Yes, the case is where the parent expresses a wish to me that the son may be allowed to have private lessons in this or that, chiefly in mathematics, sometimes in composition.

287. (*Lord Lyttelton.*) For which they pay at the rate of four guineas a quarter?—Yes; provided it is not an excessive charge, I do not consider the charge is a school matter; it is a private arrangement.

288. (*Lord Clarendon.*) No. 20, as to the playgrounds and games; you say, "My own wish and "endeavour has always been to promote the best "feeling between boarders and day scholars." There is considerable class feeling here, is there not, between boarders and day scholars?—Such a feeling I am afraid must always exist where two classes do mix in a school, but I do not think there is any more existing here than in other places.

289. The fact is such a feeling does exist?—I think different people would give different answers to that question. It is not easy to give an accurate answer.

290. Have you among the day scholars the sons of tradesmen in the town?—Yes, there are some tradesmen's sons.

291. Are they what you call small tradesmen?—No.

292. (*Mr. Vaughan.*) Can you distinguish whether that class are more or less apt to become of the non-collegiate class?—They are more apt.

293. (*Lord Lyttelton.*) With regard to the games, do the day scholars play freely at cricket with the boarders?—No, I do not mean to say that that is the case. I think I have said as much in the printed answers, in these words, "To the playgrounds at the "school they have an equal right with the boarders; "but they do not use them equally, nor do they use "them much. They naturally come at lesson hours, "and go home after lessons."

294. (*Mr. Vaughan.*) Do you think that their homes being near is the reason, rather than belonging to a different class?—I think there is a mixture of the two reasons.

295. (*Lord Clarendon.*) You say, "To the cricket "ground, perhaps, they have not an equal right in the "abstract"?—I do not wish that to be at all noticed; I give them an equal right.

296. But there is that feeling among the boys?—I do not suppose they think of it, or ask about it; but as the question was asked I gave that answer. It is merely that as I pay the rent for the cricket ground they have not, perhaps, an equal right in the abstract. It does not weigh with me at all.

297. There are about 40 of these boys at present?—I think more; I think the numbers are about equal at present.

298. Have a good number of the day scholars joined the rifle corps?—I cannot say how many; the number has fallen off lately.

299. To some extent there is a feeling of a difference of class between the two classes?—I cannot deny that there is to some extent. I cannot quite see how it is possible to get rid of it. There are two classes, and wherever there are two classes there will be some *esprit de corps.*

300. You say, "Some gentlemen of the town send "their sons here as boarders, for the purpose of giving them the full advantage of English public "school life, others deem it wise to send their "children to a greater distance from home." Is that because they do not think their boys would get the same advantages of public school life when day scholars as they would away from home?—That would be my own feeling.

301. You educate your own son at a distant school?—Yes; I am Head Master here, and I do not think I should be giving my son (being the only son I have) a fair chance, if I were not to send him away.

302. (*Mr. Vaughan.*) You say the boys are removed from one boarding-house to another, as they advance in age; if that is the case how do you preserve discipline in the junior house by means of the more advanced boys over the lesser boys?—There is a monitorial system carried on in the junior hall, and a certain number of boys who are higher than the rest are made monitors as a check upon the others, and they are responsible.

303. Is it that you give the lesser boys monitorial power in the hall for the particular purpose of preserving discipline, although they have not arrived at that part of the school in which they would generally have it?—In general they are in the upper fifth form.

304. (*Lord Lyttelton.*) Are they boys who, if they were not monitors, would be in the sixth form?—No; they are not kept back. I may sometimes have said, "I wish you would stay another half in the junior house." It has happened; but I do not keep them back for that purpose.

305. (*Lord Clarendon.*) No. 23, "Diet is uniform: "breakfast 9 A.M., tea, sugar, milk, bread, and butter "are supplied; dinner 2 P.M., two meats, vegetables, "bread, table beer, pudding or tart four days a week; "tea at a time varying from 6¼ to 7¼ according to "season, supply as at breakfast." That is the same for the whole school?—Yes.

SHREWSBURY.

Rev. B. H. Kennedy.

22 May 1862.

306. (*Mr. Thompson.*) Do you consider meat more than once a day is not desirable for boys?—I do not go so far as to say that. I should be very glad, indeed, if they had it. It is a subject which has often been entertained by me as to how far it was or not possible to give them meat at a later hour in the day; but I certainly do not see my way to doing so without the terms being proportionably raised.

307. (*Mr. Vaughan.*) But independent of expense do you think it would be desirable?—It never has been the custom here, and when we consider how many generations of boys have gone on without it, I cannot say it can be considered absolutely necessary.

308. If they had it, do you think they would work at their books better or worse?—I do not think the want of it operates as a drawback upon study.

309. Do you think a second meat meal at supper would interfere with their reading?—We must have in that case an additional meal altogether, because you could not supersede tea; they would not like to go without tea; unless indeed they had meat at their tea, according to the modern fashion.

310. I believe the health of the school has generally been pretty good?—It has been remarkably good. We have not in either house a boy in the sick room; we have not had one this half-year; and we are nearly at the close of it. In my school days we had nothing but bread and cheese for the evening meal.

311. No tea?—No, we had only milk.

312. (*Lord Clarendon.*) With respect to the adoption of the college cap. I believe that was introduced by you?—Yes.

313. About how long ago?—About three years after I became Head Master.

314. What led to its adoption; was there any particular reason for it?—I consider it to have had a most important moral tendency. I considered that persons in any part of the town could no longer have any excuse whatever for supplying a boy with, or abetting a boy in, anything that was contrary to morality and discipline; I also considered it would be a great check on the boys themselves; that they would have more self-respect when they were sure they should be known as members of the school.

315. (*Mr. Thompson.*) A police regulation, in fact?—A police regulation.

316. (*Lord Clarendon.*) Are you able to say there is good resulting from it?—Most decidedly so; there is no point upon which I can speak with more certainty.

317. (*Mr. Vaughan.*) You speak of organized school games, in what way are they organized?—By the captain of the games; there is a captain of the cricket game, and a captain of the football game. At all events football is considered a school game, and every boy is expected to attend that game unless excused.

318. (*Lord Clarendon.*) No. 29, "A few boys live "in the town with respectable persons, to whom their "parents have chosen to confide them, and attend the "school as day scholars. The masters assume no "responsibility for them out of school hours, and the "parents know this." Is there any supervision whatever upon those boys?—No, we cannot take that responsibility; we cannot have any supervision of them. They are desired not to wear the school cap, except in coming to and going from the school. I would not assume such a responsibility, it would be impossible for me to do it.

319. Do not the day boys wear the cap?—They wear the cap, but are not allowed to wear it when not under discipline. I say, "Whenever you wear "the school cap remember you are under our dis-"cipline; if you were doing anything contrary to "the discipline of the school, I should consider you "liable to punishment."

320. (*Mr. Vaughan.*) Does any distinction as to this question depend on whether they live with their parents or with others?—I do not consider that that makes any difference.

321. (*Lord Clarendon.*) Suppose in those hours when you take no responsibility for him (which I now quite understand) you hear of a boy going into a public-house or smoking?—If I had good information that such was the case, or it could be proved against him, I should write a letter of warning and remonstrance to his parents. The course I should take then would be to write to his parent and say I thought it would be better for the boy not to continue at the school, unless it was quite certain that that was the last occasion on which he would act in such a manner.

322. (*Mr. Vaughan.*) With regard to a sixth-form boy, would a sixth-form boy's authority extend to such a case, *i.e.*, when a boy is in the town with the college cap?—Yes; I think a præpostor has a sort of semi-magisterial authority; whatever a master could do a præpostor could do.

323. (*Lord Lyttelton.*) Must a sixth-form boy necessarily be a boarder?—No.

324. They may be town boys?—Yes.

325. They may be præpostors?—Yes; day scholars may be and are so frequently.

326. (*Lord Clarendon.*) No. 30. The Trustees, I presume, have absolute power to make bye-laws; and subject to the general powers of the Head Master, to make rules for the regulation of the school?—The Trustees have never interfered with my discipline in any such way as to lead me to ascertain what our relative powers are.

327. The scheme gives absolute power to the Head Master?—Yes.

328. Including, I presume, the making of written rules if he thought proper?—I presume so.

329. (*Mr. Vaughan.*) Where do boys coming for a finish for the sake of a public school education come from?—We have found that that has been the case sometimes as to boys of two classes, *e.g.*, a Welsh country squire's son sometimes comes; sometimes a Lancashire manufacturer's son.

330. You mean rather at an advanced age?—Rather at an advanced age.

331. When they can get into the sixth form?—No, I do not think they care much about that; they are satisfied if they can get to the fifth form.

332. (*Lord Clarendon.*) No. 32, as to the number of boys in the school; you consider it is about stationary now?—We got up last year to 141; we have rather fallen off this year, but there is no relying upon those things.

333. You think the falling off in the numbers has been caused by the foundation of so many proprietary schools?—I should have no doubt of it.

334. Do you not think the state of the buildings and the want of proper accommodation may have been one cause, that boys are not quite in the position, in those old buildings, which their parents would wish when they send them to a public school?—I think that may have something to do with it, and some think it has a great deal. Mr. Bather, one of the Trustees (himself an old Shrewsbury man) is of that opinion; perhaps he is right. All parents cannot know how healthy we have been in spite of these old buildings.

335. Is it true that old Shrewsbury men in general do not send their sons to the school?—I think that has been so; I think, as a general rule, they have not.

336. Considering how very distinguished the school has been in scholarship, would you not rather attribute their not sending their sons to the school to a painful realization of the discomforts they had themselves endured?—It may to some extent be that. I am hardly able to answer that question with confidence. There may be many causes in operation. Shrewsbury men become in various ways connected with other schools. There is also a great deal in fashion, and men are very apt to act upon that principle.

337. Do the boys ever complain of those discomforts; do they seem unhappy in consequence?—

So much the reverse that the regret which the boys generally express at leaving school, during the last six or seven years in particular, has been something most striking; and also the pleasure with which they have come back to visit the school; many boys I have known shed tears at leaving.

338. (*Mr. Thompson.*) Did not some public schools make a great start about the time you took Shrewsbury?—Yes; Rugby in the time of Dr. Arnold, and Harrow soon after. If Rugby and Harrow had been all we should not have cared so much, but Marlborough, Rossall, and Cheltenham have interfered with us more, especially Cheltenham, and one feels the more aggrieved because it has been a money-making concern for the proprietors, which seems hard.

339. (*Lord Lyttelton.*) You give a "half-year's "bill of a boy of ample fortune;" is that an exceptional case?—I mean he is a boy of good fortune; he is an only son, his parents are not living, his guardian placed him with me and begged that pecuniary considerations might not in any way influence me.

Shrewsbury, Friday, 23rd May 1862.

PRESENT:

Earl of Clarendon.	The Rev. W. H. Thompson.
Earl of Devon.	H. Halford Vaughan, Esq.
Lord Lyttelton.	

The Earl of Clarendon in the Chair.

Members of the Corporation of Shrewsbury.
23 May 1862.

The following Members of the Corporation of Shrewsbury were called in:—
T. W. Trounсer, Esq., Mayor, Aldermen Hughes and Haycock; Councillors Brayne, Edwards, Southam, Bloxam, Norton, and Parry; and Mr. J. J. Peele, Town Clerk.

(*The Mayor.*) On the part of the Corporation I wish to lay before the Commissioners a paper containing a few suggestions respecting the school, which we submit to their consideration.

(*Lord Clarendon.*) Perhaps the Town Clerk will be kind enough to read it.

The same was read as follows:

"Shrewsbury Free Grammar School.

"The Council of the borough of Shrewsbury desire to submit for the consideration of Her Majesty's Commissioners the following points, viz.:—

"1st. That in the opinion of this Council it would be for the general advantage of this Royal Foundation, and particularly of the inhabitants of this borough and neighbourhood, that the benefits of the school should be so extended as to include not only a classical education and one suited for scholars intended for the university or one of the learned professions, but also an education of a liberal character adapted for and suitable to the requirements of the middle classes."

"2nd. That if (without entrenching on the rights and privileges of the burgesses of the borough) an education free of charge, or at a reduced rate of payment, were provided for residents within the borough for a certain period, it would be of great benefit to the inhabitants, and increase the general usefulness of the school.

3. "That in case the subject of the exhibitions, fellowships, and scholarships attached to this foundation should become the subject of consideration by Her Majesty's Commissioners, the Council will be obliged, by an opportunity being afforded them of offering any suggestion that may appear to them so expedient before any decision is come to.

"Guildhall, Shrewsbury,
22nd May 1862."

(*The Mayor.*) I beg to say there are one or two gentlemen present who would illustrate the point as to extending the benefits of the school to others than the sons of burgesses, by reference to their own cases, and that of other residents, if the Commissioners would wish to hear any further statements.

(*Lord Clarendon.*) We shall be glad to receive any information.

(*Mr. T. Southam.*) I would wish to state that I have resided in Shrewsbury nearly all my life, and have a very large family, yet possess none of the facilities for education which I think the school should afford. I have no means of sending my sons to the school without paying the same fee that a stranger would pay, and considering that I am one of the largest ratepayers in the town I think I should have the privilege of sending my children to the school, either free or at all events at a very low fee to be determined upon for such cases. There is also this disadvantage which we labour under, viz., that the free school is the cause of keeping away other schools from Shrewsbury, which might be accessible to us as a means of education, which we really do not now possess. The impression that we have a large free school operates against parties starting a new school of a liberal character for the middle classes, consequently we have only the option of sending our sons to this school and paying a fee, or sending them to a distance.

340. (*Lord Clarendon.*) Are you one of the burgesses?—I am not.

341. Your desire would be that residents in Shrewsbury, who are not burgesses, should have the same school privileges as those who are burgesses?—Nearly so. I am not quite sure, perhaps, with regard to the whole of the exhibitions that we should be entitled quite to the same privileges.

342. (*Lord Lyttelton.*) Entitled to participate to the same extent?—To participate to the same extent. The burgesses are not a very large class, and I think that if parties resident in the town, say for a year or more, were allowed to send their children free, it would be a great benefit to them, and a great boon to the town of Shrewsbury.

343. (*Lord Devon.*) Do you know what the number of burgesses is?—I do not.

344. I presume they are a diminishing body?—Yes, they have been so considered.

(*Mr. Peele.*) I should like to add this observation. Before the passing of the Municipal Corporation Act, the Corporation had the power to make any burgesses they thought proper on petition, and they were in the habit of admitting any respectable inhabitant who petitioned on payment of a sum of 10 or 15 guineas, or something like that. They made him a burgess and gave him all the privileges of the school. That they consider they have no longer the right to do, and consequently the number of the privileged class must necessarily diminish.

345. (*Mr. Vaughan.*) Is the education you desire to have that which is now given at Shrewsbury school?—(*Mr. Southam.*) No.

SHREWSBURY.

Members of the Corporation of Shrewsbury.

23 May 1862.

346. Is the education you desire suited to the middle class?—I wish an education which may be called classical, but I do not want a college education.

347. Such an education as is not now given at all in the school?—Yes; Shrewsbury is looked upon as a classical school.

348. I wish to ask whether you desire to have the education of the school altered to meet the wants of that particular class, or whether you would be content with any kind of education now given?—I do not consider the education now given is suited to the son of a person in trade, unless he wishes to send him to college.

349. (*Lord Clarendon.*) Has there not been established at Shrewsbury a class of non-collegiates who do not carry classical education so far as you have alluded to, and which was created for the purpose of meeting that want, and which I believe has met it to a certain extent?—I do not know that it quite carries out the view I have on the subject; I believe it is only to a limited extent.

350. (*Mr. Vaughan.*) Do you think there is a large class already existing here desirous of taking advantage of such gratuitous education?—I have no doubt of it.

351. You believe it would bring a great number to the town and would be a benefit to Shrewsbury?—I believe nothing would tend so much to the improvement of the town.

352. Has it ever occurred to you to consider what would be the effect of that upon the funds of the school?—My own impression has been that if a limited fee were fixed it would be beneficial to the school.

353. You think it might be done in such a manner as to pay itself?—Not altogether, but still the increased number would not affect the funds of the school to the same extent as might otherwise be the case.

354. (*Mr. Thompson.*) Have you thought of any figure, any positive sum?—My own idea was the sum of four or five guineas a year, or something of that sort as an entrance fee.

355. (*Lord Clarendon.*) The fee now paid is 15 guineas?—15 guineas.

356. (*Mr. Vaughan.*) Has it occurred to you to define at all the kind of education, *i.e.*, the things you would desire to have taught for that fee?—My own impression has been that the difficulty which I, as a tradesman, experience is this,—the upper classes are amply provided for at the large schools, the lower classes are provided for at other schools, but for the middle classes there is no adequate provision.

357. (*Lord Lyttelton.*) Do you think that is the case throughout the country?—I think it is the case throughout the country; I think at the schools which are established now in almost every village a good education is given, and a more liberal one than a middle class tradesman or farmer can get for his own son.

358. (*Mr. Vaughan.*) Whatever the education you require, it lies in your view that it should be given you as a gratuitous benefit, and you say the sum you would be content to pay would not be a sum covering the expense of the education your sons ought to receive?—Certainly not, because I consider the school affords privileges we ought to enjoy the benefit of.

359. (*Lord Clarendon.*) You say that the continuance of the grammar school here keeps away other schools?—I am of opinion it does; there are good schools of this kind as Shifnall, Newport, and Oswestry, but scarcely anything nearer.

360. Suppose there was such a school as you contemplate at Shrewsbury, do you think you could get your son educated there at four guineas a year?—No, that is the very thing I am anxious this school should afford to me, because I have resided here all my life; I am a large ratepayer and have a large family, and those are just the cases which I think ought to come under the advantages the school ought to afford.

361. (*Mr. Thompson.*) You think those are the objects contemplated by the founder of the school?—That I am not competent to say; the state of things at the present day is so entirely different from what it was at the time of the foundation of the school, that I hardly see how it is possible to make the founder's intention apply to it.

362. (*Lord Devon.*) Are you aware, in any other town, of the existence of an independent school, carried on by an independent master, taking day boys?—I was merely anxious to know what the charge at such a school would be. I am not aware of an independent school taking day boys; there are such schools, I believe.

363. (*To Mr. Peele.*) You know nothing of the numbers of the present burgesses?—No, I have not the number.

364. Does the privilege of a burgess pass to his son or sons?—It does, down to any generation. If a man can trace his descent and show he is the legitimate son or descendant of a burgess we can always bring him in by paying a certain sum. Parties who would be admitted burgesses would be of three characters:—1. The son or descendant of a burgess, traced through his father, grandfather, or other ancestor; 2. A claimant from servitude of seven years to an incorporated trade of the town; 3. Having been born within the town, *i.e.* within the ancient liberties. Those persons have still the right to claim to be burgesses. Though they may not themselves have the right of education at the school, because they are born within the town, they may take up their burgess-ship, and the sons of those persons would have the right as coming within the condition of being burgesses' sons.

365. So that the sons of any one of these gentlemen might have the burgess right?—Yes; but parties to acquire the right of birth must have been born within the ancient liberties. The ancient liberties are those encompassed by the Severn, not including the suburbs in which these gentlemen have the disadvantage of living.

(*Mr. Southam.*) Of course the town is increasing in every direction, except within the ancient liberties. People are getting to live out of the town, and have their business premises in the town, and consequently that has an influence on the non-increase of the rights of burgess-ship.

(*Mr. Peele.*) A clergyman, the incumbent of one of the parishes, came here with several sons, and it was suggested to him, that his ancestors, some generations before, had been sworn burgesses. We looked it out for him; the pedigree was proved; he was sworn a burgess, and his sons were admitted at the school.

366. (*Lord Devon.*) Then any descendant of a burgess may, if he pleases, take up his burgess-ship?—(*Mr. Peele.*) Yes, we consider him as a burgess as long as he is born within the town. At twenty-one he may be sworn. Still if he is not sworn, the right being in him it descends.

367. The point for which I have asked these questions is this, whether you think the burgesses, as a body, are likely to diminish in point of number or not?—I should think they would, because of course at one time the corporation made a good many burgesses, and there being no power now to do it to that extent, it is decreasing. There are no doubt a great many burgesses by descent. Most of the families in the neighbourhood have a right to the burgess-ship and may if they choose take it up.

368. Take ten years before the Municipal Corporation Act, did the number of burgesses increase from year to year?—Just before an election. I may mention, in answer to one of the questions asked, that I have had five sons educated here, and the last of them had the advantage of a non-collegiate education. He was anxious not to go to college, therefore he took advantage of the education chalked out by

Dr. Kennedy, to which your attention has been directed.

369. You were satisfied with it?—Quite so.

370. (*Mr. Vaughan to Mr. Southam.*) Is that the education you desire?—To a certain extent, but not altogether, because Mr. Peele's son was educated as a solicitor, *i.e.*, for a profession. What I would rather advocate would be that a superior education of a liberal character should be given to a tradesman's son as a tradesman.

371. May I ask have you ever made up your mind what you would wish to have taught your son under that description of education?—Yes; learning Latin, French, and German are essential now to a tradesman in many branches of trade. I am in the wine trade; German is a language which a son of mine ought to learn for the German business; it has become essential within the last two or three years.

372. Of course arithmetic and mathematics?—I am not aware that Dr. Kennedy's non-collegiate system at present includes arithmetic and the ordinary commercial education for a tradesman's son. Not at present certainly.

373. Then you would wish to suit the education given at the school to that class?—Yes.

374. You say you think it might be made to answer to the school in a pecuniary point of view, and at the same time that it is an education which you could not get from a competing school seeking to remunerate itself. How would you reconcile those expectations?—My view of it is that there would be a large increase in the number of boys, and the relative outlay for those boys would not be so much larger. The present masters would, to a certain extent, be sufficient; and the fees received from them, though not entirely defraying, would help very considerably to defray the extra expenses. I look upon it the expenses would not be so much greater.

375. (*A Commissioner.*) In fact, such an education might be given so much cheaper by a school established on the spot than by a school to be established elsewhere for the purpose, that it would answer for one school and not for the other?—Certainly, because the school exists with the machinery that would carry out the object, which, in the other case, you would have to supply entirely. It is suggested to me that the school being endowed the school houses are free; there is no tax upon the masters for the school houses.

376. (*Mr. Vaughan.*) Do you think the present school buildings, such as they are, would admit of the reception of many more students?—As far as the school for day scholars is concerned, it would not be so very bad. I do not think it is fit for a very large increase of boys.

377. As far as concerns the school in which the boys are heard their lessons, you think it would admit of some increase?—Within my recollection the boys numbered 400; now they are not more than 120.

378. Do you think the schoolhouses would be sufficient for the health or comfort of many more boys?—No; I think they ought to be enlarged, whether the school is increased or not. I think they are very bad even for the limited number of boys there now, and they have done a serious injury to the school from the wretched state of accommodation they afford.

379. (*Mr. Thompson.*) Would you prefer that your sons should be partially educated with the boys who are receiving what is termed a college education, or would you prefer that the two schools, the collegiates and the non-collegiates, should be entirely separate?—They should be entirely separate, under the rule of the same master, Dr. Kennedy.

380. But you would not expect Dr. Kennedy to take a very active part in the teaching?—Not in the teaching, only in the superintendence.

381. (*Lord Lyttelton.*) Do you think it is practicable that under one master there should be two entirely separate schools?—I do not think they would be so entirely separate; it is simply leaving out the college part of the education. It would be almost like a different class rather than a different school.

382. (*Mr. Thompson.*) Two distinct classes under one roof?—Yes.

383. (*Mr. Vaughan.*) Do you think many of the boys who now receive a non-collegiate education in preference to the collegiate education, would still prefer the sort of education to which you are now alluding, viz., a non-classical education?—I am not able to answer the question.

384. Do you think many parents whose sons are now receiving a non-collegiate education in preference to the collegiate education of the school, would still, if they had the option of such an education as that you propose, prefer that to either?—I think the majority would. There may be cases in which the parties would prefer the present non-collegiate system, but I think it does not go far enough for a large class in the town.

385. I do not mean that class of persons; I mean the parents of those who are now receiving a non-collegiate education?—I think the parents of those who are receiving a non-collegiate education would prefer a little difference in the extent. I know many people who would. Even with that 15 guineas fee there are many parties who would send their boys (not to board in the school), but that a classical education is not quite the education they desire. If you are going to bring them up to a profession it is just the education, possibly, you might choose, but if you are going to bring them up to your own business, it is not quite the education you desire. For that reason I believe there are many parties who do not send their sons who would pay the fee if the education was of the class they thought desirable.

386. (*Mr. Thompson.*) You have already stated you have no sons at the school?—No, I have five sons, alive, and (though I do not send them for other reasons) I should be obliged, if I did send them, to pay the fees.

387. At the same fees, do you find it is easy to obtain such an education as you desire, including French, German, Latin, and commercial arithmetic well taught?—It is exceedingly expensive; schools are much more expensive than they used to be.

388. Are there such schools?—Plenty. There are schools that give that class of education at something like 60 guineas to 80 guineas per annum; but where you have five or six sons to send it is a heavy charge upon a tradesman.

389. (*Lord Lyttelton.*) Are those schools in this county?—There are several schools in this county; one is of high standing.

390. (*Mr. Thompson.*) Are they able to obtain the services of eminent German teachers at those schools?—Yes.

391. You think German is efficiently taught?—It is not efficiently taught; a German comes only once a week, which is not sufficient to teach German; and French in the same way.

392. Is there not some difficulty in obtaining intelligent persons capable of giving sound general instruction in French and German?—Not so much as existed a few years ago; there are more teachers now in England.

393. Are they able to enforce authority over the boys, because that is a great difficulty with foreigners?—A very great difficulty.

394. (*Lord Clarendon.*) Do you consider you are sending your sons to some distant schools at less expense than you could now send them to school here?—I believe they cost me more now, but I find the system here is not suitable for me, and the hours are not suitable. Though a resident in the town I live a mile and a half from the school, and the first chapel commences at 7 or 7.30, and in the winter it is impossible to send a boy there at that hour.

395. (*Lord Devon.*) At schools where French and German are not taught, can you not get a good commercial education taught at less than 60 guineas a year?—Yes; where French and German are not taught there are schools giving a good education at about 40 guineas a year. For the last five or six years

SHREWSBURY.

Members of the Corporation of Shrewsbury.

23 May 1862.

the rate of payment to schools has been very greatly increasing. You get a superior class of teachers, but pay higher.

396. (*Lord Clarendon.*) Then do we understand that if the education given here were of a description which suited you for your sons, you would send them here, even though at the 15 guineas a year?—I should, if the education were suitable, and the hours, —I mean the morning hours.

(*Mr. Edward Hughes.*) I beg to say I have two sons at the school now, one in the classical school and one in the non-collegiate school. I agree with Mr. Southam. I think the non-collegiate school might be extended in some points and made better than it is. At the same time I am very well satisfied, so far as my second boy is concerned (they are both going to be brought up to trade in all probability) but there are some things which might be improved. I may say on the part of the burgesses that no one would object to the school being extended so long as the burgesses' rights are preserved, *i.e.*, extended by capitation fee or otherwise to all who claim the benefit. Some time ago I took the trouble to ascertain the number of burgesses whose sons are eligible to the school, there were about 400; I think about 380 was the number. Many of the lower class do not go.

397. 380 who would have the right of gratuitous education?—Yes.

(*Mr. Southam to Mr. Hughes.*) But how many were in a position to avail themselves of it?—(*Mr. Hughes.*) That I cannot say; many were mechanics' sons. In the county I should think there must be some thousands. I imagine so, if they chose to avail themselves of it,—the sons of county families.

398. (*Lord Devon.*) In point of fact do none of the sons of burgesses, quite of the lowest class, go to the school?—Very few, but I have seen in my time some of them there.

399. There is nothing to prevent them?—No.

400. (*Mr. Thompson.*) Were you there yourself? —I was, and my father before me.

401. Under Dr. Butler, I presume?—Under Dr. Butler.

402. At that time classical education was the only one?—There was nothing else.

403. Do you look back with regret on the time you spent there?—No, on the contrary, I owe my position in the town to it. Still a valuable part of my education was neglected. I did not know that 2 and 2 made 4 when I left the school. That is very considerably improved now, as I can prove by my own children.

404. (*Lord Lyttelton.*) You are satisfied with the education given now?—Yes; but I think there might be some improvement. I think they do not carry arithmetical matters quite so far as I could wish. I think a little more would be beneficial to meet the wishes of scholars of that class.

405. Children of the commercial class?—Yes.

(*Mr. J. H. Edwards.*) I would offer one or two observations. First of all I would observe that the education which is now given is merely optional on the part of the master. Whatever the education may be, I think it should be settled by authority, and should be compulsory on whoever holds the office.

406. (*Mr. Vaughan.*) You mean optional on the part of the master to give or withhold that non-collegiate education?—Yes, it is quite optional with the master. It was done by Dr. Kennedy, and he is entitled to great credit for it, because it is entirely his own; but he may do it or not.

407. You are aware that by the scheme of the school there are certain things which must be communicated freely to burgesses' sons?—As I understand he is not bound to give the education which he is now giving, *i.e.*, a middle-class education.

408. Is he not bound by the scheme to give that and more if they insist upon it?—I had that from himself; I believe that is his view of it.

409. That the Head Master is not bound to teach the son of a burgess certain things, now taught in the non-collegiate class, and those things only?—Yes.

(*Mr. Peele.*) The fact is what the Head Master does is to exempt those boys from certain things.

410. (*Mr. Vaughan.*) He cannot compel nor be compelled to exemption, because by the scheme these things which they now learn in the non-collegiate class, he is bound to give, free from any charge, to burgesses' sons, and is also bound to give them Greek. That may be insisted on either by master or parent? —(*Mr. Peele.*) In order that they may perfect themselves better in the non-collegiate class of studies, he exempts them from Greek.

411. Was not that done at the request of the parents?—I am not aware.

412. (*Lord Clarendon.*) He thought it desirable? —Yes.

(*Mr. J. H. Edwards.*) I wish to answer a question which was put to Mr. Southam with regard to its being within the views of the founder that other parties in the town should come in. It appears to me it is only carrying out the views of the founder, because, at that time, giving the right to the burgesses was giving it to every inhabitant of Shrewsbury; and I merely want to have the intentions of the founder carried out in the present day. Every man who was born within the liberties of the town was entitled to take up his freedom and be a burgess; that is not so now, consequently the burgess class must decrease. You will find from the numbers how many burgesses' sons are at the school.

413. Is it a clear point about the burgesses, or is it only a point of antiquarian law?—It is perfectly clear. I was born in one of the town parishes, the parish of St. Alkmund's, within the old liberties of the borough, and have lived in the borough all my life; I have five sons, and I cannot avail myself of the school.

414. (*Lord Lyttelton.*) Not freely?—Not freely; I should be very glad to do so.

415. (*Lord Clarendon.*) You are a burgess?—No; and I have no means of becoming a burgess. Formerly, as Mr. Peele would tell you, the corporation would have admitted me as an inhabitant of the town, and I could have taken up my freedom on payment of a fee of 10 guineas or 15 guineas, and should have become a burgess, and entitled to the rights of the school. That privilege is now taken away, and I do not consider you would be contravening the intentions of the founder by extending those rights to the inhabitants of the town.

416. Although you are not a burgess do you send your sons to the school?—I do not.

417. Is that on account of the expense, or because the system of education there does not meet your wishes?—Both. I am not prepared to say whether the two educations could be carried on distinctly or not, but the class of education I should like to see is a liberal one, comprehending Latin, in fact everything but Greek and the other parts of a classical education to fit a man for college; everything but that.

418. Giving Latin and French?—Yes.

419. That is pretty much Dr. Kennedy's non-collegiate education?—Pretty much.

420. (*Mr. Vaughan.*) Do you see your way to the conclusion we have heard, that the presence of the present school in Shrewsbury prevents in any way the establishment of such schools as might otherwise be established for the benefit of the inhabitants? —I think it is very likely it would; I think it would be a great obstacle to a man coming here.

421. In what way?—He would think it would be a hopeless thing to set up a first-class school in Shrewsbury.

422. Would it prevent the establishment, not of a first-class school, but of such a school as you would desire to have your son educated by?—I want a first-class school, but not a merely classical one.

423. (*Lord Lyttelton.*) You are not aware of the existence of such a school now?—No.

424. (*Mr. Vaughan.*) Does the presence of the classical school you have in Shrewsbury, in your

opinion, prevent the establishment of such schools as you desire to see established?—I cannot say it does; I should think it would have that tendency.

425. Can you explain how that can possibly act to prevent the establishment of a school of another description?—The prestige of a large school at Shrewsbury (which it has always possessed, and I hope always will,) I think would naturally prevent parties who are looking out for somewhere to go, from coming to Shrewsbury.

426. You think, although there is a recognized want in the place which the school does not meet by the description of education given in that school, and is perfectly well known not to meet, yet the existence of that school would prevent the establishment of one that could meet it?—Our population is not such as to require two. We have not a population large enough to support another school.

427. (*Mr. Thompson.*) I presume that if there were no free school here the town would be rich enough to get up a proprietary school?—I think we might, but not in the teeth of this foundation here.

428. What do you think would be a remunerative fee for boys attending a proprietary school in a place like Shrewsbury?—I really do not know; I have never considered that question.

429. A fee of 20 guineas I believe is paid at some proprietary schools?—I do not know at all; I have not considered that question. My object was merely that the school should be extended by providing another class of education, and also that it should be extended to the inhabitants, persons living within the town.

430. (*Lord Lyttelton.*) Nearly the same education as described by the first witness?—Yes.

431. (*Lord Devon.*) Would you have some period before the qualification should accrue; you would not let a man in who had resided only one week in Shrewsbury?—I think there should be some limit.

(*Mr. Norton.*) I wish to add one remark: the town is very limited in residences, we are obliged to seek them elsewhere. I live in one of the town parishes, St. Chad, but nearly a mile and three quarters from the school. Indeed if I wanted a house now I should be compelled to go into the country; I do not think there is a house in the borough I could go into. The boys are obliged to be down in chapel at 7.30, summer and winter. In winter I need hardly say they are obliged to get up in the dark. I think it would be very desirable if it could be made an hour later. There is a large tract of land which will probably be built upon, and the gentlemen who reside there when it is built over will probably wish to send their sons to the school. We have a very great objection indeed to these early hours, in winter time particularly, for it is a serious inconvenience, as I have experienced myself.

(*Mr. Hughes.*) I may perhaps be allowed to say that I have heard that much complained of. It is very desirable that there should be an alteration if only for the six winter months. It is a great inconvenience to families.

(*Mr. Southam.*) I may say that I quite agree in the remarks as to the inconvenience of sending boys to the school at so early an hour in the winter months. To those who are residing at the outskirts of the town it would be a great boon to make it an hour after breakfast, say 9, just for the winter months, from November to April.

432. (*Lord Clarendon.*) You say "In case the "subject of the exhibitions, fellowships, and scholar-"ships attached to this foundation should become the "subject of consideration," &c., would the Town Council wish to put in anything in writing upon that, or are there any observations you would wish to make now?—We did not know that it was the Commissioners' intention to take that into consideration.

(*Mr. Peele.*) I think when that paper was prepared one of the council (whom I do not see here) was desirous of offering some observations upon that subject, but the other members of the council did not think they had sufficient information, and therefore it was thought more desirable not to offer their observations in writing, not knowing the points as to each of the several exhibitions. I have some knowledge of them myself in another character.

The witnesses withdrew.

The Rev. Benjamin Hall Kennedy, D.D., further examined.

Rev. B. H. Kennedy.

433. (*Lord Clarendon.*) Will you have the goodness to explain what is the meaning of "merit money"?—Four times in the half-year (monthly) the marks are considered; all the marks which have been given to a boy for his different work, whether that is classical or mathematical, or what we call merit marks, for punctuality at chapel, for good exercises, and various things for which merit marks are given,—these are all considered, and when any merit money is deserved, a sum is awarded in proportion to the boy's place in the school. Thus the head boy has merit money far surpassing any other boy in the school; half a guinea being the amount of his merit money.

434. Is half a guinea the maximum?—It is the maximum, and that is only given to the head boy. As to the præpostors, the highest merit money they can obtain is 6*s.*; the lower sixth, and upper division of the fifth, 5*s.*; the lower division of the fifth, 4*s.*; then it goes down to 3*s.* 6*d.*, and the little boys would only get half a crown at most; they would not get the maximum unless they had all V.'s, *i.e.*, all the highest marks; otherwise the merit money diminishes down to one shilling, that is the minimum. If it is a very little boy he may be pleased with the smaller coin of sixpence, but that is very seldom put down.

435. (*Mr. Thompson.*) Was that system of marks introduced by Dr. Butler?—Yes.

436. Does it exist now pretty much as it did when first you knew the school?—Pretty much; the difference is not worth adverting to.

437. "Is there any limit to the age at which a "boy can be placed on admission into the school"? You say "There is no rule on this head. It is a 'matter of discretion, always regarded as important. "A new boy is never made a præpostor. With this "exception he may be placed in any remove for "which he is deemed fit." That I suppose is according to his proficiency?—According to his proficiency. Sometimes a boy's age and size might oblige me to remove him to a higher place, though I might not think him quite fit for it. It is expedient for the good of the school, and his own good, perhaps.

438. I suppose a boy is never made a præpostor until he is in the sixth form?—No.

439. Is a new boy ever placed in the sixth form?—I do not object, if I have a vacancy, to place a new boy who is obviously fit for it in the lower sixth.

440. Have you many such boys come here?—I have perhaps upon an average one a year.

441. There are some new boys adapted for so high a form?—There are a very few.

442. (*Mr. Vaughan.*) Could you say at all as a general rule where they come from; I mean do they come from home education or private school education?—They very often come from small grammar schools.

443. In that advanced state?—In a well-advanced state.

444. So that they in fact require only the last finishing?—They require a good deal, but they are well prepared to gain that.

445. (*Lord Lyttelton.*) Your practice is peculiar in that respect, placing a new boy so high as that?—Yes, and I think the unreserved promotion of merit is perhaps one cause of our success.

SHREWSBURY.

Rev. B. H. Kennedy.

23 May 1862.

446. (*Lord Lyttelton.*) In other schools it is quite an exception, placing a boy in such a high form at once?—I suppose it is, and with us it is not common.

447. (*Mr. Vaughan.*) Have any of those boys, who have come into your hands at once on entering school, turned out first-rate scholars?—Yes; Gifford of St. John's was placed in the sixth form at first, and he soon rose to be a præpostor. He was at the age of sixteen, and was but two years and a half at the school, and at Cambridge he was 15th wrangler, bracketed senior classic with a schoolfellow, and senior medallist.

448. Did he come to you from a grammar school?—I forget where he came from; I believe he had been at some grammar school on the coast of Devon. He came from Plymouth; I think he had been at Plymouth school.

449. (*Lord Clarendon.*) "Has the Head Master "any power to modify the system and course of "study, or to change from time to time the books or "editions of books used in the school"? You say "He has such power, subject to the general provi- "sions of the scheme"?—Yes.

450. Does the Head Master often use that power of changing the books; do you often find it necessary to change the books or editions of books?—It is very seldom I do change; I always consider the expense to the boys as an important matter, especially with regard to day scholars. Of course I should do so with regard to all, but I have them in my mind particularly.

451. Can the under masters change the books or the course of studies in any respect without the Head Master's concurrence?—No, not strictly; nor probably would they do so in any important case without consulting me.

452. What Latin and Greek books have you drawn up?—I should state with regard to my own Latin grammar, I had early in life wished to take up that subject, and I drew up a Latin grammar very soon after I came here, and published it. I think almost everything I have published of that kind has arisen out of that Latin grammar, and was almost a necessary and inevitable consequence of it,—contrary to my original intention, I may say to my wish. I found the grammar required to be complemented by other books in Latin suitable to it. Again the syntax being on a peculiar system I found it very desirable to have the Greek syntax on the same principle, that the analogy of the two languages might be very distinctly brought out. It was upon that ground I drew up my Greek grammar. To show that that was my sole intention, the accidence of the grammar, *i.e.* the etymology of the grammar, is merely taken from the Eton book, *mutatis mutandis*, with the small changes which were necessary. The syntax is the only part which is original in the Greek grammar, or rather which is worked through by me. To illustrate the effect of our course of study I would point to Mr. Arthur Holmes, of St. John's, as a scholar who had the thorough training of Shrewsbury school. From his infancy his father resided in the town; he had been a professor in India and came to reside here, and he consulted me about his son from his earliest years. He learnt my books at home, and came to school at the early age of eight or nine when he was fit to receive the instruction of the school. He went from us to Cambridge, and his career at the university was very brilliant. He gained the university scholarship in his first year, three Porson prizes, and numerous other distinctions. In almost all respects his career was as brilliant as any Cambridge man's ever was, and his scholarship was as graceful and as facile as we have ever had in this school, and it was gained entirely under our system, and with the use of our books.

453. "Have the assistant masters any voice, con- "sultative or otherwise, in the direction of the studies "of the school"? You say "They have no voice "by right, but the Head Master would act most "unwisely if he did not often consult them." Have you any regular meetings with the masters, or do you only consult them occasionally?—We meet once a week; but if there be any occasion to consult them I do so. We see each other in point of fact every morning; we go into a common room before we go into chapel, and if we have anything to say to one another we do so.

454. (*Mr. Vaughan.*) But for the purpose of consulting?—We meet for the purpose of consulting once a week. We consider that evening a meeting for consultation. We have a little time for supper; the ladies leave, and we have an hour afterwards.

455. (*Lord Lyttelton.*) 9. "A boy rises altogether "by proficiency." Is that always so?—When I wrote that I was thinking of boys who are strictly to be considered as meritorious; the others cannot be considered very meritorious in any way, and when they rise it is not to the disadvantage of any other boy. If I see a boy in the upper fourth form who from his age or size or other reasons one would wish should be in the fifth form rather than the fourth, he is put into the fifth. That does not stand in the way of another boy being put over him.

456. (*Mr. Vaughan.*) But is there not a system of promotion at two periods of the year which is not determined by proficiency at all. Is there not a system of promotion at Lady-day and Michaelmas when there is no general examination?—They are not promoted then by examination, but their places in the form have been determined by previous examination.

457. They are promoted from a knowledge of what their proficiency is?—Yes, their places have been determined only two months before at the examination.

458. Those examinations occur in the beginning of the half year?—Yes.

459. How are the vacancies made; are any boys in the habit of leaving in the middle of the half year?—Yes, in the October term especially, the school is largely thinned. It is different with respect to Eton and Harrow, for the position of the holidays in the summer prevents that quarter from being used, but our boys come back till October and then leave school for college.

460. How many promotions are there in the year by examination?—Two in the year, in February and August, but the others are the result of these.

461. (*Lord Clarendon.*) You say, "Good classical "scholars have suffered loss in their university ex- "aminations by want of power or grace in their native "tongue, I have always kept this view both in teach- "ing and examining." In what manner do you consider you have exercised them in the English language?—I think I have already said that every translation lesson is more or less an exercise in the English language, because after reading the Latin and Greek separately they speak it off in English.

462. A free translation?—I am in the habit of giving this rule,—"Make your translation as elegant "as is consistent with a perfect adherence to the "meaning of the author; and, conversely, adhere to "the literal words of the author as nearly as is con- "sistent with elegance of expression."

463. (*Mr. Vaughan.*) I suppose you consider that the translation of a Greek author into English, if it is properly done, is exactly the same exercise in English composition as the translation of an English author into Greek would be an exercise in Greek?—I do.

464. (*Lord Lyttelton.*) I presume that in the scale of marks in this answer you consider the two first heads to be very nearly if not quite on an equality; 600 marks for 4 papers is nearly the same as 700 marks for 5 papers?—I do not divide them equally.

465. Is it the intention to show a preference between the two, or does it appear to you that the two branches of attainments should be on an equality, viz., translations into English and translations into Greek and Latin?—I have not had before my mind any such purpose.

466. (*Mr. Vaughan.*) May I ask what you mean by English philology as distinct from English?—I am very fond indeed of dwelling upon English ety-

mology. I do not confine myself to Greek and Latin derivations, but often diverge to etymologies of the middle ages.

467. Do you perceive no inferiority among the boys in English composition; do you think, on the whole, that English composition (the writing of English) thrives as well in the school as Greek and Latin composition?—I have no reason to think otherwise; the English composition is much less in quantity, consisting of occasional themes, and translations from Cicero's Offices; but I think it very seldom happens that in the sixth form we have a boy who is a clumsy writer. They generally write like gentlemen. Now and then I get mis-spelling, *e.g.*, "principle" for "principal."

468. What is your reason for having no English verse throughout the school?—I think mainly because we have not time for everything; there are so many things we are obliged to do, and wish to do as well as we can.

469. (*Mr. Vaughan.*) Have you any repetition in English poetry?—No, but I have sometimes given half a book of Milton at the end of the half year to fill up a gap.

470. (*Mr. Thompson.*) Are you satisfied with the knowledge possessed by the boys of the best English literature?—I am sorry to say I have not time to test this much. If I were to make it prominent I am afraid we should fritter away our power. That is my feeling. I have never seen my way. But I know perfectly well there always have been, and I trust still are, boys who are availing themselves of the opportunities they have for private reading.

471. (*Mr. Vaughan.*) Do you know whether there has ever been any English verse writing at Shrewsbury before or since your election to the school?—Very little, except voluntarily.

472. No English verse prize?—No English verse prize; it used to be the custom some twenty years ago. (it has rather fallen off of late years) for boys occasionally to send in a voluntary exercise, taken from a subject of the university, and expecting to get a holiday for the school here.

473. You do not exclude it because you find it is an exercise which boys are not capable of doing?—No, there have been boys who have been in the habit of writing English poetry, and who have taken a great pleasure in it, and I have sometimes seen their compositions and taken a pleasure in reading them.

474. You do not think that by reason of age or any other cause it is a kind of composition in which they are unable to excel?—Opinions will differ upon that.

475. (*Lord Devon.*) I understood that the system of oral translation is in use in this school for the first three or four upper forms,—I mean sentence by sentence or word by word,—that the boy reads a Greek sentence and then reads it off in English?—It is entirely sentence by sentence in the sixth form, unless, as it very often happens, a boy gets confused, or has been wrong, and then I say "take it word by word." But if not necessary I never do so. In the fifth form there is a difference, the master of the fifth form generally thinks it necessary to confine the boys to the words, but he often has recourse to the same method as myself. In the lower forms it is word by word.

476. Did you introduce the system of rendering passage by passage?—I introduced it.

477. And do you consider upon the whole that it is a system which works well?—I do.

478. But one which requires the careful watching probably of the teacher of the class?—Eminently so.

479. (*Mr. Thompson.*) Do you ever practise boys in the converse system of translating English aloud into Latin?—I have done so frequently. We have looked over the copies first.

480. They are prepared previously?—Yes.

481. Do you think that a salutary exercise?—Yes; I think it a salutary exercise. I have used books for that purpose. Arnold's books are well known and much used, and there is a book of my own in use.

482. Would a sixth-form boy have much difficulty in translating, say a page of Gibbon *vivâ voce*?—I should think that would be one of the hardest things you could give a boy to do.

483. But with preparation?—Yes, with preparation he could do it.

484. (*Lord Devon.*) Will you be kind enough to place before us for information and record the advantages you suppose to result from your system of translation, *vivâ voce*; what led you to introduce that system here?—My reasons were two-fold; one was the advantage which I conceived the boy gained in mastering the English language itself; and the other was the realization by himself of the meaning and matter of his author.

485. Which is frittered away when you translate word by word?—Yes, to a great extent. The interpretation of an author, practically speaking, seems to me to depend in two parts out of three upon an appreciation of the logical bearing and connexion of the different parts of the sentence with each other, and of the whole with the context. The grammar comes in for one-third, the other for two-thirds, I should think.

486. (*Mr. Thompson.*) It would lead to a better exercise in English?—Yes, I mentioned that as one advantage, and an appreciation of the matter and context as a second.

487. (*Mr. Vaughan.*) Do you consider the repetition of Latin prose is essential to the formation of a good Latin style?—I think it is very desirable, and I use it; I do not know whether I should venture to say it is essential.

488. (*Mr. Thompson.*) Do you consider the repetitions very long and numerous in your school in proportion to others?—No, I think probably the reverse. We repeat 50 lines of Virgil at a time. Of Horace's Odes we should repeat more probably.

489. It must be a boy of good memory to do that well?—They differ very much in that. Boys of good abilities in other respects are sometimes very deficient in the power of repeating.

490. Is it insisted upon?—I make a show of insisting upon it, but I let such boys down easily.

491. (*Mr. Vaughan.*) I think you do not adopt the system of repetition of Greek prose, though you do of Latin?—No.

492. What is the reason for that; is it the same, *i.e.* that you have not time for every thing?—Nothing more.

493. Is it not your practice in teaching Greek composition to teach Greek prose before you teach Greek verse?—Arnold's book on Greek prose has been the ordinary work of the sixth as well as other forms; I do not think we have taken harder books for Greek prose.

494. I wish to know whether you do not teach Greek prose before you teach Greek verse; as walking comes before running?—So far as short sentences in Greek prose, but not so far as translating longer sentences. For translating English into Greek at any length verse has come before prose.

495. (*Mr. Thompson.*) You think it is easier to write tolerably good Greek verse than tolerably good Greek prose?—I should think so.

496. (*Mr. Vaughan.*) Is it the case that all the Latin composition has been construed before it is repeated?—No, it used to be so in my boyish days; I think I have gained an advantage in making it an additional lesson.

497. Do you look to the mode in which it is repeated as a sign whether the boy understands it?—Yes; and if there is any mistake on his part I attribute it to his not having mastered the sense.

498. (*A Commissioner.*) If I understand the tables there is a good deal of work which appears to be repeated without ever having been construed?—No great quantity.

499. (*Lord Clarendon.*) French is not considered in the general examinations. I suppose that is not

SHREWSBURY.

Rev. B. H. Kennedy.

23 May 1862.

because you do not attach importance to it, but that there has not been time to attain proficiency?—Partly on that ground and partly for reasons understood at the university; they desire to have those boys who are very strong in some one subject, as classics or mathematics, rather than those who have attained a moderate proficiency in several subjects.

500. "But classes in it alone are published, and "prizes given at midsummer." After examination, I suppose?—Yes. Mr. Bentley reports to me the classes, and I am satisfied with his report. I believe he often institutes an examination, at least he is perfectly conversant with the merits of the boys. I believe the prizes are founded upon the marks of progress, *i.e.*, the marks of the half-year.

501. (*Lord Lyttelton.*) Are those prizes upon a level with the other prizes of the school?—Yes, they are quite equal. For instance, the works of Molière, well bound, in two octavo volumes.

502. (*Mr. Vaughan.*) In teaching history, is it not the case that you prefer the systematic use of compendious histories to original and larger works?—I always tell them "Do not confine yourself to this "compendium; you are getting a mere skeleton of "history from this; you should give flesh and blood "to that skeleton by longer and more extensive "reading."

503. Is it not the case that you teach by outlines and compendious works, for instance, Scripture history, rather than by reading the works of the original authors?—We used for a very long time a book called the "Bible Narrative," which contains the words of the Scriptures themselves, and that is still used in some parts of the school. The book I have used for a long time in ancient history is Bötticher's Historia Antiqua.

504. And is it not also a part of your system to prefer to give the boys a sketch of history through outlines and compendiums rather than to give them fragmentary portions of history in larger original works?—Yes, but I give them the larger works also, and they get such high marks for the subject that there is considerable inducement to make use of those works.

505. (*Mr. Thompson.*) I presume the sixth form would read such a history as Thirlwall's or Grote's?—I cannot say that is generally the case; it depends upon themselves. Some boys have such a passion for history they read everything that comes in their way.

506. The opinion you have expressed to them as to skeletons of history would necessitate the reading of the original, or some large work?—Yes. I find some boys much better prepared than others. It is singular that the Welsh boys who have such a difficult language of their own to deal with should be our worst French scholars. We generally find their names towards the end of the third class.

507. (*Lord Lyttelton.*) Do you find it usual that boys come up who are well acquainted with French and pronounce it fairly well?—Some few do; particularly those boys who have been at a French school.

508. The majority do not pronounce it well?—No.

509. You attach great importance to their being well grounded in French before they come to such a school as this?—Certainly.

510. (*Mr. Vaughan.*) Have you any access to a list of your prizes; there are 25 or something like that?—There would be 20 or more prizes given. In the sixth form I give two prizes to the two best classical scholars, depending upon the last previous examination; I give a Greek verse and Latin verse prize, and sometimes (not always) a Latin essay prize. Very often it is given. Last year there was one. The best mathematician in the sixth form has a prize. The best mathematician in every form has a prize. The best French scholar in every form has a prize. The best classical scholar in every form has a prize. I have mentioned the classical, mathematical, and French prizes in each form. Then there is a very important prize in the forms below the sixth, which I call "the aggregate merit prize." It is given to that boy, or sometimes, in case of near equality, to several boys, who have done best generally, in conduct as well as work.

511. To boys in each of those forms?—Not in the sixth form, in each of the other forms. I look to everything; I see how many first classes a boy has, viz., classical, mathematical, and French. Our classes are arranged:—1, classical; 2, mathematical; 3, French; and a boy's name being in the three first classes would go very far in respect to merit; but I look to see what penal marks he has had; if he has had very few or none, that tells. In short it is a summing up of his literary qualifications, his industry, and his moral character. Those who stand the highest in those aggregate respects receive that prize which is called "the aggregate merit prize."

512. Do divinity, history, and geography enter into the examination for which the classical prize is given in each of the forms, or is an examination taken separately for these?—In the sixth form the examination decides pretty nearly the classical prize, unless indeed the classical merit of the second boy should surpass that of the first. In that case (which is very rare) I should give the classical prize to the second instead of the first, because of his superior classical merit, and the first would get the mathematical prize.

513. I want to know whether divinity and history form part of the classical examinations?—Yes. In the forms below the sixth I take the places from the reports of the masters, and I believe in every form they examine in divinity and history. I am pretty sure they would consider those subjects as belonging to classical literature.

514. (*Lord Lyttelton.*) With regard to keeping up a knowledge of French, what is the average time a boy remains a præpostor?—I think the average time a boy remains a præpostor would be about two years.

515. (*Mr. Vaughan.*) When the boys are examined in different forms, do you have the same examination for all the forms, or a different examination for each form in its own work, or work adapted to it?—An examination of each form in work adapted to it.

516. In none of the examinations do you give the same form of questions to all the school?—That has been done sometimes in one subject only, viz., arithmetic.

517. But not in classics?—No; we should have no motive for it at all.

518. There is a different set of questions?—Yes.

519. (*Lord Clarendon.*) The Dean of Christ Church sends an examiner for the Careswell exhibition, is he paid?—Not by me; that is a matter for the Careswell trustees. Mr. Harding, a clergyman of this town, is the receiver of the Careswell property, and manages all those things for the Careswell trustees, of whom Lord Powis is the principal.

520. (*Mr. Vaughan.*) Is it the Dean of Christ Church who always has the choice of the examiner who comes down, or do you determine that?—The Dean of Christ Church chooses the examiner. I have no doubt to the Dean of Christ Church it has become now a matter of very considerable interest, since the Careswell trustees adopted the wise measure of throwing open the scholarships. They were kind enough to accept our recommendation exactly as we made it; they referred it to the masters of the schools, who met and considered the matter and made a recommendation, which the Careswell trustees were good enough to carry out precisely. They had a surplus and did not know what to do with it, and they established a prize of 100*l.* open to the six schools without limitation of county.

521. (*Lord Devon.*) Then with regard to the general administration of the trust, so far as concerns the school, you, probably, would be of opinion that it is administered now in the way best calculated to pro-

mote its efficiency?—Certainly, with due regard to the claims of parties.

522. (*Mr. Vaughan.*) Do you think the same principle at all applies to the Careswell exhibitions which applies to that prize of 100*l.*?—It would be better for us if there were no preference to Shropshire at all. There is still a preference to Shropshire in the exhibitions. All such preferences are more or less disadvantageous to the school itself. In no other point of view would the observation apply.

523. It says in the list of exhibitions there are "14 exhibitions appropriated to five other Shropshire "schools," do those schools compete with Shrewsbury for these exhibitions?—They may do so. All those schools have their own *quota* in the appropriation of the exhibitions; one has four, some have three, and some two; and if they can find a competent candidate for an exhibition they have a right to it. He is still subject to examination, and if he should be found incompetent the exhibition is then open to all the schools.

524. Has that often happened?—There are two schools which never do send candidates, Shiffnall and Donnington. There are few from Bridgenorth now-a-days, though it used not to be so. Newport and Wem generally have candidates. They have a few boys, and they have masters who prepare them for the exhibitions.

525. (*Lord Devon.*) Those 14 exhibitions would come to Shrewsbury supposing the five other schools had no candidates?—Yes, provided the other five schools had no candidate. If the particular school has no candidate who is competent, it is thrown open to the other five schools.

526. (*Mr. Vaughan.*) Has it ever happened that when one school has not had a candidate the other four schools have competed for it?—No, it has rarely happened that any competition has arisen between ourselves and any other school. These two last years, which are the first since the prize has been instituted, it so happens we have gained a minor studentship at Christchurch in the February of each year, and the other schools have not sent a candidate into the field to compete with us for the Careswell prize.

527. Does it practically come to this, that Shrewsbury generally takes the exhibitions that any other school cannot send a competent candidate for?—That has been the general rule, but not without exception.

528. (*Lord Devon.*) There are five Shropshire schools to which the exhibitions are appropriated; suppose one of those five schools, to which say two exhibitions are appropriated, has no boys competent to pass such an examination as qualifies them to receive such exhibitions; are those two exhibitions open to the students of the other four schools with Shrewsbury or without Shrewsbury?—They are open to Shrewsbury and the other schools.

529. Shrewsbury is then let into competition with the other four schools?—Yes.

530. (*Mr. Vaughan.*) Are the four put down here the *quota* of Shrewsbury out of the 14?—Yes.

531. They always fall to Shrewsbury?—Yes.

532. Have you it in your power to state the average number which, with those four and the others that came to it by default, actually fell to Shrewsbury in each of the last few years?—If that question had been asked before I could easily have answered it; I will make a note and answer it hereafter.

533. (*Lord Lyttelton.*) With regard to the latter part of the answer to question 13, are all composition prizes given upon open competition?—Yes.

534. And there are no other prizes given on a special examination?—There are no prizes of the same kind.

535. "The school prizes for composition are "given and withheld on the same principles as at "the universities; the other prizes are the result "of school examinations, general work, conduct, &c., "not specially examined for"?—I meant the words "not specially examined for," to refer to the general work. I believe those other prizes, a list of which I have already given, are not specially examined for; they are the result of the general work of the half year, as reported by the masters.

536. (*Lord Devon.*) Will you be kind enough just to look to page 21. There appear to be three Careswell exhibitions at 60*l.*, 21*l.*, and 27*l.*?—There are four Careswell exhibitions at 60*l.*

537. Do those sums represent the annual value of one?—Those sums represent the changing value of a single exhibition. Numbers 15, 16, 17, 18, each represents a Careswell exhibition of 60*l.*

538. (*Mr. Vaughan.*) Am I right in my understanding of one of your observations on this subject, viz., that you do not consider the restriction of any other exhibitions which are limited to particular colleges in the universities of Oxford and Cambridge, as prejudicial to the interests of the school, except those which are limited to Magdalen College, Cambridge?—I consider our having scholarships limited to Magdalen College is better than not having them at all, and there is no disrespect whatever intended to Magdalen College; but of course, for the interests of the school, I say they would be better open.

539. But would you extend that principle to St. John's College at Cambridge and Christ Church at Oxford, and the other colleges the scholarships are limited to; would you think it better they should be open?—It is impossible for me as Head Master of a public school to answer that question otherwise than in the affirmative. There is no doubt it would be better for the school if they were unlimited. The Dean of Christ Church wished to throw open the exhibitions to that college to the competition of Shrewsbury school and the other five schools. I and the masters of the other schools were consulted about it; we had a meeting and the thing was talked over, and we were severally asked our opinions upon it. The other masters said they must oppose any such proposition. When it was put to me I said I did not feel myself at liberty to support it. It would have been my obvious interest that it should be the case, but I did not consider I should be doing a kind or generous thing to the other masters in supporting it, whatever my opinion might be of the benefits conferred on public education generally.

540. It would have been a loss to those five schools of so many exhibitions?—Such at least might have been the result.

541. They were to be open to the competition of all the six schools?—Yes; you will see in what a position I was placed, and upon what conditions I answered that question. If asked "Would "it be for the interest of Shrewsbury?" I could but answer "Yes"; but if asked "Do you re-"commend it?" I would prefer to remain neutral.

542. (*Lord Clarendon.*) "A master is now ap-"pointed to superintend the private tuition of all "boys below the sixth form." That was spoken of yesterday?—That has been considered by me for some time; it is an extra expense to which I am going because I consider it is for the good of the school. I wish to make an effort; it is admitted that the principle of private tuition has its advantages; that the oversight of boys out of school is a useful thing. That has only just been instituted, since the quarter, and we now are considering the best means of bringing it to bear.

543. That would not apply to boys in the sixth form?—No, nor would it apply to boys who are able to work by themselves.

544. It refers to work but not to the superintendence of the boys?—Of course we are all private tutors of the boys, more or less, as regards their conduct out of school, and we all talk matters over.

545. "Extra private reading when allowed at "Shrewsbury," permission is obliged to be asked for that?—Yes.

546. By the parent?—Yes.

SHREWSBURY.
Rev. S. H. Kennedy.
23 May 1862.

547. (*Lord Lyttelton.*) In the note below Mr. Calvert says, "Any boy requiring extra tuition re- "ceives it on terms arranged privately with the "several masters; in my own case a single pupil "charged at the rate of four guineas a quarter, "receives instruction in my own rooms for an hour "every day, precisely as a student reading with a "private tutor at Cambridge; our only restriction "is that subjects forming part of the school work "shall not be read privately." But subject to that condition is it always allowed in the case of a parent who wishes for it?—If the parent has consulted me as to whether it was necessary, and I had any idea the parent's means were limited and it would be oppressive to him, I have said the boy could do very well without it, but if there has been no objection of that kind I had no wish to stand between the parent and the master.

548. Supposing there were time for it?—That I leave with confidence to the consciences of my colleagues. I do not think they would take any pupil they could not do justice to.

549. (*Lord Clarendon.*) 18, "It is practicable "to some extent and not unusual to pay attention "to individual character, &c., thus, if a boy has "decided powers and taste for mathematics, with "industry and conduct, and no such taste for classics, "I excuse him from verse composition in order to "do mathematical exercises instead." Is your observation of the boy's character only with reference to verse composition, or would you look to that in putting him into the non-collegiate class?—No, I am speaking chiefly of the boys who come up to the sixth form; it does happen occasionally in the fifth.

550. (*Lord Lyttelton.*) It is *pro tanto* a sort of approximation to the non-collegiate system?—No, they have the Greek lessons, it is only the verse composition they omit.

551. (*Lord Clarendon.*) It is adapting the system as well as you can to the individual character of the boy?—It is.

552. (*Mr. Vaughan.*) How do you manage in that case with regard to apportioning the marks to the different subjects; for instance, how do you manage with regard to apportioning the mathematical marks; you tell us mathematics have the value of 600 in the 2,000; I suppose when the apportionment is made with reference to those boys, mathematics (or whatever is the peculiar subject) have a greater value?—The mathematical papers are given in the sixth form, and I imagine in the others, so as to include the highest subjects they are reading in the form; there may be boys in the form who are not able to touch those subjects.

553. When a boy is allowed to do mathematics instead of composition, is not the value attached to mathematics in the papers, with reference to that boy, greater than with the other boys?—He is able to do more, and so to get more marks.

554. He is allowed an extra number of marks for that?—He gains them by superior knowledge.

555. So that his marks may exceed 600?—They could not exceed 600, that is the limit. Whatever the work may be the total number of marks is 600. The mathematical master apportions those marks.

556. So that his marks could never exceed 600 for mathematics?—They could never exceed 600; they would probably exceed those of other boys.

557. (*Lord Clarendon.*) 19, "I have no doubt, in- "deed my experience proves, that the ordinary school "work in classics and mathematics is sufficient to "ensure success in competitive examinations to an "able and attentive boy." Has any boy gone straight from Shrewsbury to a competitive examination and competed successfully?—I cannot say that that has been precisely the case, but I think I may draw that inference from the five who have gained the Indian appointments in the late examinations. They certainly went to college first, but I am quite sure they gained in every case by their classics. I have reason to believe they gained by their classics, and I think I may venture to say, with almost full assurance, that they gained by the classics they took to college.

558. (*Lord Lyttelton.*) Shrewsbury boys have not succeeded in the Woolwich or Civil Service examinations?—I think almost all the boys who have gone to Woolwich have succeeded. The Civil Service appointments they have not tried for. Of those who have gained the Woolwich and other military appointments the number has been limited. We have had a few who did not pass.

559. (*Lord Clarendon.*) What length of time were those five young men you alluded to at college?—I think they got it in their second year; they had been at college one year. I think one got it at the end of his first year. They gained it by classics and history. I do not think in any case mathematics carried the point.

560.—21, "The school has a library. The boys "have not access to it?"—They have access to it for the school work; they have not access to the books. They have not the use of the books in the library.

561. (*Lord Lyttelton.*) Who have the use of the books?—The masters.

562. Has it not occurred to you under any restrictions to give the boys the use of the books?—It never occurred to me to be worth while to attempt it with regard to this library, because the head boys have a very good library of their own, and Mrs. Kennedy has formed a library for the use of sick boys, from which we lend books whenever they desire it.

563. (*Mr. Thompson.*) They are very old books in the library, are they not?—They are chiefly old books, not books the boys would read.

564. There are no new editions of the classics?—No.

565. (*Lord Clarendon.*) It struck us yesterday that you were very badly off for accommodation, and also that the library is a very handsome room. As the books appear to be old books, and probably are not much used at the present time (the boys not having access to them either) would there be any means of providing another place for the books and turning that large room to useful school purposes?—Indeed I think it would be a most valuable change, but it would involve I should say the necessity of another building for the reception of the books. No doubt they could be accommodated in a very much smaller room, those that are worth keeping. I have no doubt there are a great number of books which have no other claim to be kept except that they are *ex dono*. My own house is a very cramped one.

566. (*Mr. Thompson.*) Do you recollect the number of books in the library?—I do not recollect.

567. (*Mr. Vaughan.*) 22. "I tried choral music "for two half-years, and it was taken up with some "zeal at first." Why was that given up?—Yes, the boys sometimes take up a thing with great zeal and then let it drop. As regards myself, I do not know anything of music.

568. Were they taught music scientifically and on principle?—I had a music master, and he came once a week into the school.

569. Do you know what his qualifications were?—Some said he taught pretty well. I believe he taught on the Hullah system.

570. (*Lord Clarendon.*) You say "Fifteen boys "have attended the school of design." Is there a school of design at Shrewsbury?—It has not yet connected itself with the Government schools. It will do so directly.

571. Some of the boys have attended that school?—Yes.

572. (*Mr. Vaughan.*) Let me ask whether you do or do not consider the power of drawing is a very useful power to a student of classical authors?—Eminently so.

573. Do you not think there is a very great deal, particularly in the poets, Homer for instance, owing to the objective nature of Greek poetry, and also in the historians, a boy's understanding of which can be

tested a great deal better by his drawing a sketch than by any number of questions you could lay before him?—I have no doubt of it.

574. Would it not then be a very useful preparation for coming to a public school, a knowledge of the art of drawing?—I think so.

575. (*Lord Clarendon.*) How do the boys find time to attend that school?—They are chiefly non-collegiate boys.

576. (*Mr. Vaughan.*) With regard to music, would it not also, perhaps in a less degree, be of considerable advantage to a boy to have a knowledge of the elements of music in understanding the classics?—I have no doubt of it in that point of view, or in any other point of view, certainly. I speak from my impression, being quite ignorant of the science of music. I have no doubt it must be of the highest value; I feel the want of it, and can guess what its value must be.

577. Do you think music is implicated a good deal in the works of the ancients, both in their poetry and their philosophy?—Certainly it is; especially in Greek literature.

578. Is there not a good deal of musical illustration in the philosophy of Plato for instance?—Yes.

579. And a knowledge of the principles of music, as taught even now, as based upon a knowledge of the principles of antiquity, would give assistance?—Yes, I presume so, but I speak without any authority whatever on the subject.

580. (*Lord Clarendon.*) "Boys who have no "penal marks during the half-year, and in the "summer those who are in the three first classes, are "allowed to go home several days before the rest." I do not think that is a system in use in any other school, is it?—I desire to encourage good conduct during the half-year as well as the industry of the half-year as much as I can; and I know there is nothing boys value more than going home a few days earlier. It has its effect, I think.

581. (*Lord Lyttelton.*) How many days are they allowed to go home before the rest?—The school at large going home on the Wednesday, those boys who have had no penal marks in the half-year, would be allowed to go home on the Saturday preceding.

582. (*Lord Clarendon.*) Are you able to allow that to many boys on the average?—I think we have had as many as 20 who have been so allowed. This half-year, probably, the number is not so great. I think the number will be about 14 or 15.

583. (*Lord Lyttelton.*) Do you not think making them write out a large number of lines as a punishment has a bad effect on the handwriting of boys?—No boy in this school except a boy in the sixth form is liable to write out a large number of lines, unless he has accumulated upon his head a number of other punishments. We are driven to that as a *dernier ressort.*

584. (*Lord Clarendon.*) Do you consider that punishment objectionable?—Yes; I do not know any punishment which is not. Milton is subjected to this desecration; I had an aversion to giving Virgil as a punishment; I thought Milton would bear it better.

585. (*Mr. Vaughan.*) Do boys obtain many half holidays for themselves in the course of the half-year who have merit marks?—Yes; many boys obtain a half holiday at different times in the course of the half-year.

586. You think that is a motive to them to do well?—Yes; I think it is, certainly.

587. (*Lord Devon.*) Passing from rewards to punishments, I understand from your answer that flogging is not applied to any offences except those of a moral character, or serious breaches of discipline?—That is so.

588. No literary faults are so punished?—Not unless they assume an aspect of moral guilt, which is just possible.

589. (*Lord Lyttelton.*) No merely stupid boy is in danger of flogging?—No.

590. (*Lord Devon.*) Do the under masters flog or is it reserved for yourself?—The second master has a right to flog, and ought to flog in the lower school. When Mr. Gifford came he said if I would flog the boys in the lower school he should feel himself very much obliged. I said, "It is not adding "much to my duties, if you, as a young man, dislike "it," so I took it upon myself, and it has remained with me since.

591. Where is the flogging administered?—In the school library.

592. In the presence of whom?—Of the monitor of the form.

593. Not in the presence of the whole school?—That is a punishment I have sometimes resorted to, but very rarely, when I wished to make a signal example.

594. (*Lord Lyttelton.*) Is there any limit as to age?—There is no nominal limitation; but I am always loth to flog a boy of advanced age. I sometimes have flogged a boy in compassion to him or his father, to save his being sent away.

595. How many cases of flogging have you in the half year?—On an average perhaps there would be half a dozen.

596. Out of the whole school?—Yes; I have passed through a half-year without a single flogging.

597. Practically it is confined to the younger boys?—Yes; sometimes a fifth-form boy is flogged, but chiefly the lower boys.

598. (*Lord Clarendon.*) Bullying you would consider a grave offence?—Yes.

599. Is there very little of it here?—I have every reason to think so; the feeling of the upper boys is strongly against it.

600. (*Lord Devon.*) What is the punishment for going out of bounds, which sometimes may be complicated with going into a public house?—Such a case has not arisen of late years as going into a public house. I punish for going out of bounds by putting the boy on the idle list for one or more weeks, according to the case. If it were repeated within a certain time, it probably would be visited with flogging. That has not occurred this half-year.

601. (*Lord Clarendon.*) I see you class smoking and falsehood together?—Smoking is an offence which I am obliged to meet with a sharp punishment. I do not class them together morally.

602. I only meant you put them together here?—I only put them together as liable to flogging.

603. (*Mr. Vaughan.*) Do you not think it has a bad effect, giving the same punishment for two such different offences; do you think the boys understand the ground sufficiently to prevent any bad effects in confusing their ideas between a mere improper habit and a gross vice?—I endeavour to make it as clear as possible. If there were more gradations of punishment I should be very willing to resort to them. Smoking is a habit which if not repressed would grow very much in a school. The præpostors always distinctly promise they will prevent it in the houses and studies, but boys do smoke; there are always some few who do more or less. I think it is in the country chiefly. They go out and take their cigars into the country.

604. (*Mr. Thompson.*) You would not take secondary evidence of smoking, *e.g.*, the smell of a boy's hair?—I would not flog him upon that. Once in the case of a little boy I took that as evidence to obtain further proof; and (the boy being one to whom I could do it,) I said, "Come with me to your locker." I made him open his locker, and there I found his store of cigars; then I flogged him.

605. (*Lord Clarendon.*) 27 to 30, "The præ-"postors, twelve in number, have obtained their "rank by literary merit only;" I thought we understood the præpostors were the first twelve in the sixth form?—Yes.

606. Then those below might have superior literary merit to those first twelve?—The others gain their position by superior literary merit, and I do not think it expedient, when a boy has been made

SHREWSBURY.
Rev. B. H. Kennedy.
23 May 1862.

a præpostor that he should be removed, unless degradation has become necessary. They may lose their places in their remove, and often have done so to another boy, when a vacancy has occurred, in examination.

607. But they still keep the præpostorship?—Yes.

608. (*Lord Lyttelton.*) When are they allowed to wear a hat?—Always, it is a proof of confidence.

609. And a privilege of that sort is valued, I presume; they always do wear it?—Yes.

610. Are the bounds not discriminated?—There is no limit to præpostors. Of course it will be easily understood if I saw a boy going into any objectionable place, I should say "You must not go there," but that is a thing which I may almost say never happens.

611. (*Mr. Vaughan.*) You find that your confidence is rarely abused?—I have known instances where it has been abused, but as a general rule it is not abused.

612. (*Lord Lyttelton.*) And they go home a day earlier than the others?—Yes, if they choose.

613. Do they often carry sticks?—They have not done it of late; they may do so.

614. (*Lord Clarendon.*) What is that regulation by which "they engage by signature, on the part of "the school, to do and prevent many things"?—There are some things, I must say, I consider to have been in the nature of a compromise, to a certain extent. I have proposed on my part to waive certain things, and to allow certain things on condition that they, on their part, did not do certain things, and would prevent those things. One of those is giving a breakfast at an inn, which used to be a custom on leaving. I have confined that to the house of a confectioner they usually go to, and make it a condition that they do not have wine or ale on that occasion, which they also promise. With regard to the game of "hounds," they promise if that is allowed, it shall be confined to the space within the river, and they will not cross the river by either bridge. One or two other things of that kind they have engaged by contract to do, and by signature to do; each præpostor signs his name to what he knows he has to do; and it is understood that on my part certain things have been permitted on those conditions.

615. (*Mr. Thompson.*) Would they inform you if there was any systematic attempt to violate those conditions?—I should presume so.

616. You would expect to be informed?—Yes, certainly.

617. (*Lord Lyttelton.*) You say "Sometimes a "compromise has been admitted; but if the Head "Master considers a certain course essential, he insists "upon it, giving his reason, and the præpostors, "after consideration, have always yielded the point." It is not meant that they would have any option?—They have no option, but if they had stood neutral, I could not have exacted a promise, and that would have left it an open question. I meant to say they have yielded so as to make a promise. I never should attempt to force a boy to make a promise.

618. (*Lord Devon.*) Can you give us an example of your meaning from the last transaction you had with the præpostors?—There was a question some few years ago about what they used to call the "hounds" dinner. It was a custom to have a dinner before the Christmas holidays, at which I understood they had beverages of one sort or another, and there being many boys from different parts of the school, (I suppose most of the school would be there,) I considered it very objectionable they should have such things. It was an old custom; they are very tenacious indeed upon that point; they do not like breaking through old customs. I said I should positively put a stop to the game of "hounds" by a forcible measure, viz., multiplying "callings over" if that was not agreed to. Some of them, who were obviously willing to yield, did not feel themselves authorized to do so without the consent of the rest of the school, and it was a matter of doubt for several days. I said for many reasons it would be very painful and disagreeable to me, to feel myself in a state of war with the whole school, but I could not allow wine, strong ale, spirits, or anything but bitter beer to be introduced; upon which conditions, and those alone, I would allow the dinner to take place at the usual house. All those things were at last agreed to.

619. (*Mr. Thompson.*) Is "the usual house" an inn?—No, a confectioner's shop.

620. They have a room large enough?—They have a room large enough; I do not suppose for the whole school. Of course I am not invited on those occasions. They did finally consent to it after several days' consideration—to see whether I would hold out, I suppose.

621. (*Lord Devon.*) Have you had interviews with the præpostors as a body?—Yes.

622. (*Lord Clarendon.*) The "monitory system" vests in the præpostors. Do you consider that it is carried out by them?—I call their powers the monitory system.

623. (*Lord Lyttelton*) It is confined to the præpostors?—Yes.

624. It does not belong to the rest of the sixth form?—No.

625. What is the number?—The number is twelve at this moment.

626. (*Mr. Vaughan.*) You say "they are entitled to set punishments to the extent of 10 C. P." Do they ever exercise this power?—I do not think they do.

627. Suppose a præpostor sees an act done deserving of punishment, does he not then set any?—I do not think they are in the habit of acting magisterially. I think they do it by their own personal influence, acting as boy and boy, but the præpostors stand on their own privileges nevertheless.

628. If a præpostor sees a boy doing what he should not do, the præpostor would not set him some punishment, as the master would?—No.

629. (*Lord Lyttelton.*) Would they report it?—I am afraid not. Not in cases of smoking, for instance, unless it were done in the studies or the house; in that case I think it is as likely as not, a præpostor would take the law into his own hands.

630. (*Mr. Vaughan.*) In case of seeing a boy bullied, what course would a præpostor pursue to vindicate the discipline of the school and protect the lower boys?—I am hardly the person to answer that question; I think there is a great chance he would deal as boy with boy, and say "I will give you a "good licking if you do that."

631. He would deal simply as a big boy with a little boy?—I think the chances are that he would; I think if he could not, *i. e.*, if he had not physical power, he would leave it alone; or perhaps he might confer with the other præpostors, one or other of whom would do it. By that answer I meant to say they have no official power to cane or send a boy to the head room to be caned.

632. And he would not set a punishment?—I do not think it is the custom.

633. What is the principle on which you think it desirable that all boys should attend at foot-ball?—It is not a regulation of my own, it is a regulation of the boys themselves. I have never seen any reason to forbid it.

634. It is compulsory?—Yes, I think there are certain days on which boys are expected to attend.

635. (*Mr. Thompson.*) Not day boys?—No.

636. (*Lord Clarendon.*) I do not understand "individual fagging"?—I think it is explained so far, by stating what the amount of fagging is which is allowed. The præpostors are allowed to use for certain services of the head room, four fags weekly. They are put on by rotation, come to the head room at a certain hour, a little before meals, and ask what messages they have to carry, and so on.

637. No boy has a fag of his own?—No.

638. (*Mr. Vaughan.*) Do they not send messages by them, and make them do those services which an "individual fag" does?—If the boys were put on, and a præpostor wished it, he would do so.

639. If a præpostor sees a boy standing about, and wishes his coat or hat fetched, has he authority over him?—It is by no means a customary thing to do; I think this is the general rule, that four boys are by rotation fags of the head room; but I think the services they have to perform are pretty definite.

640. (*Lord Devon.*) Of what character?—I think going to fetch them something from a shop.

641. Not of a menial character at all, such as cleaning shoes?—No, never certainly, they have no limit in that way; they have as many boots and shoes cleaned as they want.

642. (*Mr. Vaughan.*) Do they keep the goal at foot-ball, the lesser boys?—Yes.

643. They keep the goal and do not join?—They always choose two boys at a time to keep the goal.

644. (*Lord Lyttelton.*) Do the lesser boys join on the same terms as the others?—Yes.

645. (*Mr. Vaughan.*) Have they a separate game of their own, the lesser boys?—Not at football; at cricket they have.

646. (*Lord Devon.*) Is it your opinion that the system of two holidays in the year works better than having the same as other schools?—I think perhaps rather so; I have not a strong opinion upon it.

647. You found the system existing?—I found it existing and did not alter it.

648. (*Mr. Vaughan.*) Have you holiday tasks here?—As the examination takes place partly at the end of one half-year, partly at the beginning of the next, two papers are left over, and perhaps one or two others, so that the boys have work on hand to prepare.

649. And the subjects for prizes, are they given out before the holidays?—Yes.

650. And sent in soon after? I mean the prizes for composition?—The prizes for composition will be adjudged now, almost immediately.

651. They are not given out so that the boys can do them in the holidays?—They are very often given out before the Christmas vacation, though the papers are not to be sent in before May.

652. (*Lord Lyttelton.*) At the end of 32 you say "Some modification may hereafter be made;" would you state to what that alludes?—I think many parents may consider that sixteen weeks are too much holiday, and it is only on account of having abolished those few days (which had grown into a week) in the middle of the half-year that I have allowed so much. It would have been a very disagreeable thing to the boys to be deprived of those days without any compensation; I therefore acted, as I generally have done, on the principle of compensation and of keeping them in good humour, so far as I could do so consistently with principle, and have allowed the addition at present; but feeling at the same time that a time might come when it might be proper to make some modification.

653. (*Lord Clarendon.*) You say the boys are required to be in chapel at 7.30?—Yes, they meet at 7.30; the masters afterwards meet, and then we go in.

654. I will take this opportunity of mentioning a complaint which was made to us this morning by some members of Town Council, viz., that the hour of 7.30 during the six winter months is exceedingly inconvenient to those who are compelled by want of accommodation in the town to live at some distance with their families?—That is very easily met by letting them miss their morning chapel, as I have often done when health has been made the plea. I have always said, "If you can in any way state that "your son's health is unfavourably affected by his "getting up at that hour; if you can get a medical "certificate, or without a medical certificate, can "say his health is likely to suffer, he shall be "exempted."

655. The principal difficulty appears to be the distance at which the parents are residing, a mile and three-quarters from the school, and consequently the getting up so very early, the boys having that distance to perform?—7.30 is about as late an hour for the first lesson as any school in England has.

656. (*Lord Lyttelton.*) Considering the amount of work to be done, you could not begin later?—Hardly. I know at the school where my son is they rise at 6.30.

657. (*Lord Devon.*) The commencement of the school at 7.30 in the case of a boy who lives a mile and three-quarters off implies getting up at 6?—Probably so; at all events, it is not a ground of complaint; it is only a thing they would like to have altered. It has always been the practice.

658. (*Mr. Thompson.*) Have you thought of any modification?—I do not know of any modification, unless it were made optional to the parent to say whether his son should or should not attend the first lesson, in which case he would be placed at a considerable disadvantage with reference to the other boys.

659. (*Mr. Vaughan.*) Would it not be difficult to know where to stop, because if one boy lives a mile and a quarter off, another may live a mile and three-quarters or two miles, so that you would find yourself in a difficulty in apportioning the time to those different boys?—Certainly, I have endeavoured to put it on the only tenable footing, as it seemed to me, by putting it on the ground of health.

660. (*Lord Lyttelton.*) Do the day-boys breakfast before they come?—I am not aware how that is.

661. (*Mr. Thompson.*) Do they usually return after the first school?—I believe so.

662. And come back after breakfast to the 10 o'clock school?—I believe so.

663. (*Lord Devon.*) What interval have you for breakfast?—The boys may perhaps be out of school from 8.30 to 8.45; nine is the breakfast hour. We are out generally at 8.45. It may be a long lesson will keep them till the breakfast hour, or a short lesson may let them out sooner.

664. When do you go into school again?—At 10.

665. (*Lord Lyttelton.*) There are at least three hours of play time every day?—Yes, certainly; at least three hours, and more than that; there is a good deal in the summer time.

666. (*Lord Clarendon.*) Do the three quarters of an acre of playground include the fives court?—Yes, I think I have under-stated that rather; the Commissioners have seen it; I do not know what you would consider the measurement of the fives court, perhaps it is altogether more than three quarters of an acre. I have said the cricket ground, also used for football, is about four acres. I think it is more.

667. How far is that off?—About half a mile.

668. (*Lord Lyttelton.*) Do they complain of the playground as too small?—I think it is a little too small; the ball will occasionally go off.

669. (*Mr. Vaughan.*) I suppose you have to pay a good deal for it, being so near Shrewsbury?—I have to pay at the rate of 5*l.* an acre.

670. Is there not any ground which the Governors of the school could hire permanently at a regular annual rent, for the school?—That ground might be had; of course I need hardly say I have never sought or asked them to do so.

671. Could not the Trustees buy that?—Yes, but if they did so it would open that question, which might be a very vexed one on the part of any who wished to find a grievance, and were disposed to make the most of it, viz.:—the question of boarders and day scholars. If the day scholars did not practically make use of the ground it would be asked why the Governors paid for it.

672. In other schools there are boys living in the town who have access to the playground, subject to the Trustees?—Yes, they have access to it here, and I know several of the day scholars do join in cricket, and others might if they would. To a certain extent there is a degree of favouritism on the part of the boarders, who may like some day boys, and not particularly like others.

673. (*Lord Clarendon.*) Would the day boys be looked down upon by the other boys if they came

SHREWSBURY.

Rev. B. H. Kennedy.

23 May 1862.

to play cricket?—I think there is a little favouritism. It depends upon social relations in some measure.

674. (*Lord Lyttelton.*) As to swimming; have you any system of ascertaining how a boy can swim?—Yes, we have the report of the bathing man.

675. You have a bathing man?—Yes, we have a bathing man, whose duty it is to attend.

676. (*Lord Clarendon.*) Who is the drilling master?—He is an old sergeant. I am not speaking of the drilling of boys who want to attend the rifle corps, but the ordinary drill of the sergeant.

677. They are drilled in the common exercise?—Yes.

678. With regard to the rifle corps, the number is not so large as it was?—No, I am afraid the spirit of the original movement is hardly sustainable. I have not interfered with it myself, and I am afraid Mr. Calvert will have a poor account to give of the attendance this half-year.

679. But you do not doubt it will go on?—It ought to go on, because we have had assistance given us; but this being a voluntary thing, each boy considers himself independent.

680. Are they allowed to shoot?—There has been no opportunity; Mr. Calvert resigned the captainship six weeks ago, because they did not attend the drill.

681. (*Lord Lyttelton.*) You think the school games are rather overdone for a school of this size?—The average of parents here are not rich. There are some who can afford a good deal, and some who can afford very little, and when they want to keep up the boats and the regatta, there is a great deal of pressure used by the captain of the boats; and I fear that tempts boys to teaze their parents for money, and may make the school itself rather more expensive than it ought to be. To keep up the gymnastic exercises well, a good deal of expense is required for a small school.

682. (*Mr. Vaughan.*) I referred just now to what that organization is for the games?—It is just the same kind of thing as the stewardship of races would be.

683. For every amusement of that sort there is an acknowledged head who manages it for the school?—There is by election.

684. (*Mr. Thompson.*) I suppose betting would not take place?—I would not say such a thing might not take place.

685. (*Mr. Vaughan.*) Subscriptions are opened?—Yes.

686. A tax is imposed, I suppose?—Yes, it comes to that.

687. Have they any constitutional mode of imposing the tax, or is it done by the head of the sixth form, or a committee?—It is done by the head boy; but if he did not do it upon some recognized principle he would be resisted; some school Hampden would soon rise up.

688. (*Lord Clarendon.*) You say, "I took the "first occasion of addressing the school in chapel on "the duty of attending holy communion, at the same "time explaining the principle on which I should "rigidly act, of severing this question from school "discipline altogether, even to the extent of not "allowing attendance or non-attendance to modify "my reports of character and conduct." I suppose that has had a much better effect than making it compulsory?—I have not a doubt about it.

689. (*Lord Lyttelton.*) It has never occurred to you to make it compulsory?—No.

690. (*Lord Clarendon.*) The boys responded?—Yes; the first communion that took place after that was attended by 28 boys, and the numbers have continued to be satisfactory ever since; but as I say there, I never talk individually with a boy on this subject unless he seeks it. It has happened that he comes to me.

691. (*Lord Lyttelton.*) Are you quite clear upon the point you mention here, that in this country those who set a value on a university education and classical training is steadily diminishing?—It would be presumptuous in me to give an opinion; I only speak from the slight importance in which it now is held in this country by the commercial classes, the growing power and influence of those classes, and the little value which, as a body, they are inclined to set on those things.

692. Do you apprehend the middle classes of this country at any time set much value on a university education?—I do not know that they ever did, but they have become now so much more important and influential (owing to the power of steamboats, railways, and the like) that I think that which makes money is more considered than anything else. They ask what bearing classics have on money matters.

693. (*Lord Clarendon.*) You consider classics and mathematics to be the elements of liberal instruction?—I do.

694. And that any further development should be in the direction of English, French, and, if practicable, German, grammatically taught?—The latter is what I should call a liberal non-collegiate education; the other is what we call our ordinary classical course.

695. (*Mr. Vaughan.*) Do I rightly understand from your answers that you would consider that Latin is the proper basis of a public school liberal education?—I do.

696. And that its further development is either in the way of Greek or in the direction of the modern languages?—I do, so far as language is concerned.

697. And the proper complement to it is a mathematical training?—I mean to put both elements on an equal footing.

698. On an equal footing as educating in two different lines?—Yes.

699. Has it ever occurred to you to consider how far the teaching of physical science, *i. e.* the natural sciences as distinct from mathematics, would also furnish a basis of a liberal education?—I should think they would not furnish a basis for education at all; I should consider them as an assemblage of facts, not as supplying principles.

700. Do you mean that the natural laws, which are taught in the science of chemistry, heat, electricity, and such matters, do not supply principles or general laws which furnish a basis for education?—I should think they would not furnish a basis for education. Of course I attach the greatest possible value to them, but I should think they do not furnish a basis for education. They are not synthetical enough for elementary instruction.

701. Do you not think that altogether they furnish a particular discipline for the mind, which is peculiar to themselves, and is different from that either of mathematics or languages?—I should think they would be better as adjuncts to a course of education than as a part of elementary teaching.

702. Do you not think they furnish a particular discipline both to the senses and understanding, besides giving most valuable information applicable to all purposes?—As a discipline of the senses I should admit their value. I am speaking now of an abstract mental discipline, not of the discipline of the senses.

703. Do you not think a certain discipline of the senses is of itself valuable?—Certainly.

704. So far as they cultivate the habit of observation through the senses, the physical sciences are valuable instruments of education?—As adjuncts.

705. Do you not think that the action of the senses is so combined in the prosecution of the physical sciences, with the action of the intellect, that it furnishes a valuable discipline to the intellect also?—It has never occurred to me to think that as an elementary discipline it was sufficient.

706. I do not mean to ask if it would be sufficient by itself, but supposing it could be combined with the classics, as mathematics can be combined with the classics, would it furnish a valuable discipline?—I must repeat my answer; as adjuncts, the physical sciences are valuable instruments of education.

707. (*Lord Devon.*) You say, at the end (p. 20): "I am saying nothing that interferes with the "existing right of burgesses to gratuitous instruction, "but merely suggesting a principle on which their "decaying numbers may be wisely supplied in the "future arrangement of the school." I do not quite understand what the principle you are suggesting is?—We receive salaries for which we are supposed to perform duties, and I quite agree with all those who hold that the benefit of those poor who are capable of liberal training, and for whom it is desirable, was intended to be one of the important ends of an institution of this kind; and therefore I think it is proper that a certain fixed number of poor boys, who are not capable of paying school fees, should be admitted to the school. At what point that number should be fixed is a difficult question. I do not mean to give an opinion upon it; it is an open question; but suppose the number were fixed, we will say, at 40. Burgesses already have that right,—though many of them certainly do not need it, but still they have the right. Suppose they did not come up to the number of 40, if it were thought that were the proper number which we should teach gratuitously for our salaries, then the deficiency in the number of burgesses'sons short of 40, might, I imagine, be wisely filled up by a suitable number of needy boys, fitted, by their ability and conduct, to be prepared for a learned profession.

708. To be chosen by whom?—That I do not say.

709. You have not formed any opinion?—I have not formed any opinion. I desire to leave that question open.

710. (*Lord Clarendon.*) In conformity with the statutes, could you limit the number?—No; I am not suggesting that the burgesses' sons should be limited, but they have not for many years reached the number I am assuming. Of course there are those who would wish no interference, but upon that I differ from them. I assume as a principle, that this being a school founded partly for the purpose of giving a liberal education to poor boys, (not a commercial education, not such as may be obtained at a national school, but a liberal education of a different character,) there is among the humbler classes of society a certain number of boys every where to be found who would do credit to such an education, and who would here receive such an education as would be beneficial to themselves and the community. If it was thought fit that the school should have a minimum number of boys taught gratuitously, and the burgesses, who have the right of gratuitous education, did not supply that minimum number, then it might be complemented by the election of certain poor boys upon the principle of merit.

711. (*Mr. Vaughan.*) Do you consider it at all remarkable that with so many classical distinctions as the school has achieved at Cambridge, it should have achieved so few comparatively at Oxford, having as it has, some very lucrative exhibitions at Christ Church?—In the first place those exhibitions at Christ Church being limited to Shropshire boys, have been taken by Shropshire boys who have been only just capable of taking them; and in the second place Christ Church itself has hitherto held out little or no inducement to boys to go to that college with a view to establishing their position in life. The studentships have, till lately, been given by interest merely, and are very poor.

712. As far as I understand the account, one of those Christ Church exhibitions is worth no less than 120*l.* a year?—No; it is 60*l.* for six years. It is never more than 60*l.*

713. With regard to those exhibitioners of 60*l.* they are liable to the same conditions as those at St. John's college, Cambridge, are, viz., birth within the county of Salop?—That is the only limitation of the Careswell scholarhips, but not of exhibitions at St. John's.

714. Whatever disadvantage the scholarships at Oxford lie under, the scholarships at Cambridge lie under the same?—They lie under a greater.

715. That being the case, does it at all strike you the list of honours at Oxford is unsatisfactory compared with the magnificent list at Cambridge?—I think it is to a certain extent an accident that a greater number of boys have been disposed from time to time to go to Cambridge than to Oxford. As a Cambridge man, I may perhaps, understand the Cambridge system of awarding honours better than that of Oxford, and like it better; and some boys may acquire the same feeling. I do not, however, seek to influence them.

716. Notwithstanding those inducements to go to Oxford, your best men go to Cambridge?—They have gone in greater number; I do not say the best men, when we have had such men at Oxford as Scott, Cradock, Riddell, and others; still the greater number have gone to Cambridge.

717. (*Lord Lyttelton.*) Referring to the table on the last page, I should wish to understand the full number of hours' work which those boys do. Is it so that the hours of school work on a Monday in the sixth form are five hours?—This table was one of the most difficult things to compile, because we do not measure our work by time, but by quantity. There is that difficulty. In this table we have been obliged to make a certain amount of compromise with facts to get at an approximate statement. A boy may be in school till 8.45, or if the first lesson be long, up to 9, or only up to 8.30, or even 8.15.

718. Monday appears to be school from 7.45 to 8.45; that is one hour; then from 10 to 12, and from 3 to 5, which make five hours; that is about five hours' school-work that day. In the case of a studious, ambitious boy in the sixth form, how much time besides these five hours will he work?—A hard reading boy will work three hours more; a boy who takes things easier will do less. At different periods of the year they will do more or less.

719. You believe a hard working boy will work eight hours a day?—He may; I have no doubt some boys would.

720. (*Mr. Vaughan.*) If he has something like five hours in school, would not more than three hours be required for getting up those lessons, two Latin and Greek lessons, and composition?—That would depend upon circumstances.

721. I mean with a good working boy of the average proficiency?—It is very difficult to say. I recollect myself at school the lessons gave me little trouble, the exercises a little more; and I used to read privately. I tried to get them over, and went to reading by myself.

722. Eight hours would leave him three hours for the games. It would not encroach too much on the hours for recreation?—Some boys do not join in the games; others join in all of them, perhaps too much.

The witness withdrew.

SHREWSBURY.

Rev. B. H. Kennedy.

23 May 1862.

THE MAYOR of SHREWSBURY, JOHN BATHER, Esq., The REV. EDWARD WARTER, JOHN LOXDALE, Esq., W. BUTLER LLOYD, Esq., T. H. HOPE EDWARDES, Esq., ROBERT BURTON, Esq., The REV. R. L. BURTON, Governors and Trustees of the Free Grammar School, and J. J. PEELE, Esq., Bailiff and Treasurer, called in.

The Governors, Trustees, and Treasurer of Shrewsbury School.

723. (*Lord Clarendon.*) I do not know whether there is any gentleman we may address ourselves to, as the spokesman of the trustees. We wish particularly to ask for any information the trustees will have the kindness to give us respecting the possibility of improving the accommodation of the school buildings. We went over them yesterday, and I daresay the trustees will not be surprised to hear that we did not

SHREWSBURY.

The Governors, Trustees, and Treasurer of Shrewsbury School.

23 May 1862.

admire them very much; so far from it, it is impossible not to feel that the stationary state of the school, not to say the retrograde state of the school, so far as the number of boys is concerned, must be in a great degree attributable to the state of the buildings. I think there is no father who comes to look at the school before placing his sons here but would hesitate to send them to a place where they would be so ill accommodated; the accommodation being so utterly unfit for the present usages of society among those classes from which you would desire the boys to come to a school like this. We have no doubt that something must have occurred to the trustees, and they probably have either already done, or are intending to do, something towards improving the accommodation. It is upon that subject we should be glad to have some information?—(*Mr. Warter.*) I need hardly say we cannot express too strongly the feeling we have, as to the state of these buildings.

724. (*Mr. Thompson.*) Perhaps I may ask the trustees whether they are of the same opinion with Lord Clarendon, that the state of the buildings is the operative cause of the decline of the school?—(*Mr. Warter.*) Entirely; I think no two persons can be of a different opinion.

(*The Mayor.*) I think that is the general opinion of the trustees.

(*Mr. Bather.*) I have found, as a general rule, that burgesses who have boys to send to the school do not send them; however attached they may be to the school, from certain reminiscences, there are certain other reminiscences which prevent them sending them; so that there is very rarely an hereditary connexion kept up.

725. (*Lord Clarendon.*) You consider the father's recollection of the discomforts and sufferings of his school days neutralizes his recollection of the educational advantages of the school?—(*Mr. Bather.*) Yes, sufferings arising from the want of accommodation for a boarding establishment; that is my own individual opinion.

726. (*Lord Lyttelton.*) The trustees must have had this in mind very long, and very clear and they must have some distinct views of what should be done?—(*Mr. Peele.*) I may explain that the trustees have made a representation, putting it in very strong language asking the Charity Commissioners to appropriate such a portion of the money in the funds as may enable them to purchase the property, adjacent to that belonging to the school, of the Rev. Mr. Butler, which he has agreed to sell at a very reasonable rate, not being more than seventeen years' purchase on the rental. They have also consulted Mr. Christian, the architect, as to how the property thus acquired can, with the sites of the present head and second master's houses be made most convenient as future residences for the head and second masters, with proper accommodation for a limited number of boarders. The Charity Commissioners have examined into the question through their inspector, Mr. Martin, and are prepared to consider the application favourably. In the meantime the trustees have abstained from pressing for any decisive order pending the present inquiry, and they would be glad to receive the sanction of the Commissioners of Public Schools to the proposed improvements. (*Mr. Peele then pointed out upon the map the present property of the trustees, and also that which was proposed to be purchased.*)

727. (*Lord Clarendon.*) Then what is the exact nature of the proposition which is now before the Charity Commissioners beyond the purchase of the property?—To know to what extent they think it expedient for the trustees to apply the funded property in purchase and building.

728. That is before the Charity Commissioners?—Yes.

729. (*Lord Devon.*) What is the extent of the funded property?—Between 9,000*l.* and 10,000*l.*

(*Mr. Warter.*) The scheme under the consideration of the trustees at present is only to build a new second master's house. Our funds are so limited we could not take into consideration the Head Master's house as well. We considered the second master's house was in the worse state and required the greater repairs; and it was the intention of the trustees to rebuild the second master's house, and when the second master's house was built, if funds could be procured, to pull down the Head Master's house and rebuild it. The second master's house was considered most urgent. The rebuilding of both houses was considered in Mr. Christian's estimate of 9,000*l.* With the purchase of land we should have to spend 12,000*l.*

730. (*Mr. Vaughan.*) Does that arrangement comprehend the dealing with the building after it is erected, *i.e.*, the mode in which it shall be dealt with so as to be made into a boarding house; I mean as to whether it should be given to the under master as a boarding house rent-free, or whether it should be given at a rent. Have those arrangements been at all considered?—They have not been considered at all.

731. Would not the pecuniary prospects of the arrangement a good deal depend upon that?—We gave instructions to Mr. Christian, the architect, to provide a house in which fifty boys can be accommodated for the Head Master, and a house in which twenty-five or thirty can be accommodated for the second master; and it was with reference to providing accommodation for those numbers that instructions were given.

732. Was it intended that the house should be given gratuitously to the Head Master or the under master?—It was contemplated being given in lieu of the present accommodation.

733. So as not to interfere with the present arrangements?—Not at all; merely replacing the present Head Master's house and second master's house, so that they might be brought into the state they ought to be in.

734. That would consume the whole of the money?—Yes.

(*Mr. Lloyd.*) We thought it would be cheaper to throw both houses into one; to have the Head and second master's houses not upon the ground we have purchased of Mr. Butler, but on the other side, and to have them built in that way, *i. e.*, not divided. Now they have both divided houses.

735. (*Lord Clarendon.*) May I ask whether you have ever considered the subject of borrowing money for the purpose of placing the school in the position it ought to occupy, considering its success and the rank it has attained in education?—(*Mr. Peele.*) I do not think we have gone so far as that. We have been waiting for the judgment of the Charity Commissioners. They sent down Mr. Martin to make inquiries, and we have been waiting for them before forming any very definite idea.

736. (*Lord Lyttelton.*) It does not seem probable that any considerable sum could be raised by borrowing?—(*Mr. Peele.*) Upon what security?

737. That is what I wish to know; you know your resources better than we do. Do you think such security could be provided?—I do not see my way to it. Our funds consist of tithe rentcharges, which of course are not likely to improve; they may fairly be considered at the amount of the commutation rentcharge; and with the charges which, under the last scheme, we are bound to meet, we cannot safely calculate on a surplus of more than 200*l.* or 300*l.* a year. Since the scheme has been sanctioned we have not been enabled, after the payment of the costs, to do more than invest in the funds the sums required to be contributed towards the erection of dwellings for the incumbents of St. Mary's, Clive, and Astley; therefore we could not prudently borrow a larger sum than that surplus would defray the interest of; though we shall save something of the expenses we have been put to in the repair of the old houses.

(*Mr. Warter.*) We have some very poor chapelries, and considering the amount we draw from them in the shape of great tithes, where we have no resident minister, they press upon us.

738. (*Lord Lyttelton.*) Some of those appear to be not over-paid?—(*Mr. Peele.*) It is impossible more could be done than has been done for them.

739. At present it does not appear to you it could be done even with the aid of Parliament. You do not see any further means of borrowing?—I am afraid not, because we have this additional liability; besides the maintenance of the school, we have the maintenance of the chancel of St. Mary's, which has already cost us 400*l.* or 500*l.*, so that since this scheme was last in the Court of Chancery we have not been able to make any further savings than to meet the expense of doing that. Of course we could save nothing towards providing houses.

740. As I understand, you estimate the cost of the improvements at 9,000*l.*?—Yes.

741. Then you must lose the interest of that sum?—Yes.

742. How do you look for that to be replaced?

(*Mr. Warter.*) We propose to make the purchase, and then to see how far we can go in the erection of buildings.

(*Mr. Bather.*) It was suggested we should make an appeal to old Shrewsbury men to contribute towards these expenses, and it was calculated that a large sum might be raised by that means. That 9,000*l.* is part of our capital; after paying our expenses we have a very small surplus; and if we spend that 9,000*l.* we shall lose the interest and consequently part of our income. There is another point upon which certainly I, and I think some of the other trustees, have doubts; viz., how far we should be justified in spending money in building boarding houses in the way proposed. In our plan for rebuilding the masters' houses we have confined our architect to providing fair accommodation for the same number that can be accommodated in the present school buildings. That opens up the whole question of boarders. My own opinion is, that at present the Head Master has a monopoly in the taking of boarders, and that it is very desirable it should be thrown open. In that I am only expressing my own opinion. I think it ought not to rest with the trustees as a body to build boarding houses, which ought to pay their own way. At all events, if we are to build new houses for the masters, we are bound in justice to afford both the same accommodation they have at present, so that the second master shall not be in a worse condition than he is in now. If his hall will hold 25 boys now in a very inefficient way, we ought to build him a house which will hold 25 boys in an efficient way.

743. (*Mr. Vaughan.*) Have you considered whether the Head Master, notwithstanding his monopoly of a boarding house, has a stipend upon the whole greater than he ought to have as Head Master; and if not, how far you will think it consistent to fritter it away?—(*Mr. Bather.*) I do not consider it would be frittering it away, because if boarding houses were established he would have more boys in the school. I should like to separate the commercial part of the subject of boarders from the Head Master.

744. (*Lord Lyttelton.*) You consider it would be necessary, in case the Head Master were deprived of any profits by the loss of what you would consider his monopoly, that these should be made up to him by some other arrangement, so that he should not lose a part of his income?—(*Mr. Bather.*) I think it would be made up to him by the fees that would come in. For instance, if the fees were to come in for 50 boys he would get 50 times 15 guineas. It would make a competition in the way in which the boys were treated. It is now in the hands of one person; it is a monopoly. If other boarding houses were established there would be a competition in boarding houses; each would try to get as many boys as he could. The Head Master would be a competitor with the others, and have a boarding house.

745. (*Mr. Vaughan.*) And find an element of compensation in the increased number of the scholars who would pay the capitation fee?—(*Mr. Bather.*) Yes.

746. (*Mr. Thompson.*) Are there any houses in the neighbourhood that would be available with a little alteration?

(*Mr. Warter.*) Yes, there are houses in the neighbourhood; not, I think, any large houses.

(*Mr. Bather.*) When I was at Shrewsbury school there were 301 boys, and then Dr. Iliff had a house immediately above the entrance gates, which had been a brewery. He furnished it, lived in it, and took boarders, after Dr. Butler had built his house. The second master had twenty-five boys. The assistant master also took boarders. They had three boarding houses, forming the opposite side to these buildings. Dr. Butler bought the property, and built that house himself.

747. (*Lord Lyttelton.*) That was when the number was 301?—(*Mr. Bather.*) Yes.

748. What is the highest number the school has reached of late?—About 140.

(*Mr. Warter.*) In those days there was no competition, because Dr. Iliff did not have the boys from the Head Master's hall. I should wish that the Head Master, the second master, and any other master with the consent of the Head Master, should keep a boarding house, but keeping the supply in the hands of the Head Master, except the second master, or one of the masters of the school, so that any independent person should not come to keep a boarding house.

749. If there was any great increase in the number of boys, the Head Master could allow boarding houses to be set up?—(*Mr. Bather.*) The Head Master might think he could keep three boarding houses himself.

750. What is the largest number of boarders who have been here within the last twenty or twenty-five years?—(*Mr. J. Lloyd.*) About 300 boys altogether; 285 boarders, I believe.

751. Then were they accommodated by the Head Master alone?—No, as Mr. Bather has told you, Dr. Butler bought that house which Mr. Bather has alluded to, and put Dr. Iliff in and allowed him to take boarders.

(*Mr. Bather.*) He did not allow Dr. Iliff to take boarders unless his own houses were full.

752. (*Lord Clarendon to Mr. Bather.*) We see exactly what you wish; that anyone should come and take boarders?—(*Mr. Bather.*) With some kind of sanction; a licence from the trustees or the Bishop of Lichfield, and that with that licence he should be encouraged to take boarders. There should be three boarding houses.

753. But he might take away boarders from the Head Master or the under master?—(*Mr. Bather.*) That would be one of the advantages of competition. That is what I should like to see.

(*Mr. Warter.*) I do not think that would be the opinion of the trustees generally. I do not think it would be a courteous proceeding.

754. (*Mr. Vaughan.*) Are you aware whether other public schools are open to that competition?—(*Mr. Bather.*) I have heard that in other public schools it is a matter of competition, *i. e.* the way in which the boys are treated; and they make one house more desirable than another to increase the number. I think the Head Master's position would always give him an advantage over anybody else, if the treatment were the same. I think any person would prefer sending his son to him.

755. (*Lord Devon.*) I suppose now if any stranger chose to rent a house and take boarders, those boys boarding in the house could be sent as day scholars?—(*Mr. Bather.*) I think that is a question. They may be in a way smuggled in under one of those rules, but they can only be admitted under that rule, if it be not inconsistent with the scheme; and as there is a clause which talks of boarders, I think it would be rather inconsistent with the scheme to allow it.

756. I find there are 60 boys day scholars, 22 are sons of burgesses, and 38 are not sons of burgesses, and might come from any part of the world?—They live with their parents; they come in under the

SHREWSBURY.

The Governors, Trustees, and Treasurer of Shrewsbury School.

23 May 1862.

fourth clause of the scheme, "subject to such other "regulations not inconsistent with this scheme, as "shall from time to time be made by the said gover- "nors and trustees, with the consent and appro- "bation of the said Lord Bishop of Lichfield."

757. (*Lord Clarendon.*) Have complaints reached the trustees with respect to the boarding of the boys; the food?—(*Mr. Bather.*) No, I think not.

(*Mr. Peele.*) As a body, certainly not.

758. (*Lord Clarendon.*) I will read a few lines in Dr. Kennedy's statement, in which he says, "The "present trustees have within the last few years "taken a wise step towards remedying the wants of "the school. They have purchased certain pre- "mises hitherto rented by me, and essential to future "expansion. They may, perhaps, be deterred from "doing more at present by consideration for me, "being aware that it is now too late for me to derive "any personal advantage from new premises." I apprehend it is want of funds quite as much as any other cause?—(*Mr. Bather.*) Quite so.

(*Mr. Warter.*) I am of opinion a very large subscription might be raised. I have talked to a good many old Shrewsbury men, who are still connected with Oxford and Cambridge, in London, and they are all of the same opinion. I do not know Dr. Kennedy's reason. We asked him to come and confer with us at one of our meetings of trustees, and I have consulted him, and he said he thought it never would do. He did not give any reason. He seemed to think it was a means of which we should not avail ourselves. I think we could raise many thousand pounds. I know large sums would be given by many.

759. (*Lord Lyttelton.*) It seems that, so far as what the school professes to do in teaching, it could hardly be improved; but supposing the accommodation were to be greatly improved, the consequence of which would be to raise the fees, would that enable a fund to be raised?—(*Mr. Warter.*) When we have improved the accommodation I think it might. We must first do that.

(*Mr. Bather.*) Do you make a distinction between the fees paid by the boarders and the fees paid by the non-boarders? Because you could raise the fees by the boarders in consequence of the improved accommodation, but if you were to raise the fees paid by the boarders, you must raise those paid by the non-boarders, unless you have two distinct classes of fees.

(*Mr. Warter.*) The charge to the boarders might be raised.

760. (*Lord Lyttelton.*) Then you think if the accommodation of the school were improved, the payments to the masters might to be increased?—(*Mr. Warter.*) Certainly.

761. (*Mr. Vaughan.*) Might not the boarders reply to that, that at this moment they are paying for the education of the non-boarders under the present system of accommodation, inasmuch as some portion of what they pay goes eventually to pay the stipends of the assistant masters?—(*Mr. Warter.*) I do not think they would look at it in that way. Anything that increased the jealousy between the town boys and the boarders would certainly be very injurious.

762. I suppose there is no doubt that the Head Master's salary, as Head Master, teacher, and manager of the discipline, is not paid under the name of salary, but what he is really paid for under the name of board is the administration of the school, and instruction of the scholars?

(*Mr. Warter.*) He could not live on the present stipend.

(*Mr. Bather.*) Not in the present state of the school, but if the numbers were increased, he could.

763. (*Mr. Thompson.*) Have the fees been increased at all since Dr. Kennedy's time?—(*Mr. Bather.*) No.

(*Mr. Peele.*) They have been decreased since Dr. Butler's time. I think Dr. Kennedy has acted very disinterestedly. He has suggested that the fees under the scheme should be lowered.

764. (*Lord Clarendon.*) Perhaps we ought to ask the opinion of the trustees upon a matter respecting which we had the opinion of the Corporation this morning, as I suppose you are aware,—the with that there should be a non-collegiate education of the very first class given, at a rate of expense that is of the most moderate amount. I do not know how far the trustees agree with that request. The request was not made to us, but a statement was made upon which I think it was proposed a recommendation of ours should be founded.

(*Mr. Warter.*) I think when the trustees have done their duty to the present trust, they would be glad to extend the benefits of it.

(*Mr. Bather.*) I should be glad to make an observation upon a class which exists in the school, called the non-collegiate class. As a trustee, I feel individually, that I ought to object to it; indeed, under the present scheme, there is no authority to carry it out, and it cannot regularly be carried out. The scheme states what shall be taught in the school. We do not see that the master has the right to make an exception as to one part of it. He might just as well leave out the Church Catechism or the Liturgy as Greek and Latin composition. It is not optional with the master. There are certain things coming in, as the arts and sciences, which may be taught or not; but those things stated in the first part of the scheme are compulsory on the masters to teach, and they have no right to omit anything. Their duty is to teach Greek and Latin to every boy who comes to the school.

765. (*Lord Clarendon.*) But it may be optional with the boy or his parent whether he is to learn all those things?—(*Mr. Bather.*) The scheme says the boy shall be taught such and such things, which, in my opinion, gives a certain character to the school, which may be destroyed by taking out any of them. Suppose the master, instead of saying "I will not "teach Greek," were to say, "I will not teach the "Church Catechism," or the Liturgy, so that nobody shall be obliged to pray?

766. (*Mr. Vaughan.*) Would you construe the scheme in this way: "Shall teach the boys so and "so, whether they wish to be taught or not"?—(*Mr. Bather.*) Yes, I think so; they might not wish to learn the Church Catechism. The character of the school should be kept up.

767. (*Mr. Thompson.*) Do you think it would bear the construction that the master might be called upon to teach Greek?—I think not; it would destroy the character of the school.

768. (*Lord Lyttelton.*) The whole school might come under that exception?—Yes; they might all be exceptions, and you would have no liberal education at all.

(*The Mayor.*) I think Dr. Kennedy's alteration is a great improvement.

769. (*Lord Lyttelton.*) The question is, whether it is a legal one?

(*Mr. Bather.*) It is in existence now, and it is either legal or not legal.

(*Mr. Warter.*) It is only fair to Dr. Kennedy to state what occurred upon that point. He started the non-collegiate class, and it afterwards struck him, on looking at that clause, that he had not authority, and he applied to the trustees, and a committee was appointed. We had a great deal of discussion on that point; we ourselves did not agree upon the construction of the very clause which has been read; and I think it resulted in our saying we would not give Dr. Kennedy authority for doing what he requested; but we did not take any proceedings to prevent him doing it or continuing what he had done.

(*Mr. Bather.*) I can only say, for myself, I do not sit easy in not taking proceedings to put a stop to it.

770. (*Mr. Thompson.*) Do you conceive that Dr. Kennedy is under an obligation to teach Greek to every boy in the school?—(*Mr. Bather.*) Yes; he is

to go through a certain course. There may, of course, be some lower class not taught Greek; but if they stay in the school they should proceed up to the Greek class. Greek should be an essential part of the course.

771. (*Mr. Vaughan.*) Is it part of your objection that there is the least tendency in the present system to encroach upon the option of the parent to have the whole of that education; is it simply to preserve the character of the school, or do you think there is no other mode of ensuring the whole of that education to those who may wish for it than to object to the existence of anything less than that? — (*Mr. Bather.*) I think it is the thin end of the wedge; to get a school for liberal education converted into a commercial school. I think that is the tendency of it, and I think that would be an extreme disadvantage to the whole school. I think it would be impolitic as well as illegal.

(*Mr. Warter.*) I think the body of trustees would go with Mr. Bather if they thought that was so. If they thought it was the thin end of the wedge, they would be very sorry to see it.

772. (*Lord Clarendon.*) What is the number of the trustees? — (*Mr. Peele.*) Twelve elected, one *ex officio*.

773. (*Mr. Thompson.*) Are you aware there has been introduced, with some measure of success, a non-collegiate element in other public schools?—(*Mr. Bather.*) I do not like it myself. I have looked at this class as a trustee of the school.

774. (*Lord Lyttelton.*) Of course the trustees are bound to act upon this scheme, and it appears, with one exception, the trustees have acted upon it. The exception is this: it is distinctly required "that "the scholars of the school shall be examined yearly "at such times and by such person or persons as the "Lord Bishop of Lichfield shall appoint, and that "the said examiners or examiner shall ascertain the "proficiency of such scholars in learning," and so on. I need not go through it, but it is very specifically provided in what manner the examination shall be conducted; and the next clause is, "that of the can-"didates so classed, the said governors and trustees "shall forthwith, after receiving such report, elect so "many as shall be necessary to fill the exhibitions "then to be filled up." We understand those two sections have been wholly set aside. I wish to know what the view of the trustees is, — whether the trustees consider that that regulation has been substantially complied with?

(*Mr. Bather.*) It has been a neglect of the trustees. The clause directs an examination, and the election is to depend upon that, but it has not been called into activity; I suppose, because there have been no competitors for the exhibitions.

(*Mr. Warter.*) The subject has been discussed among us as trustees. Dr. Kennedy said the onus rested rather upon us to enforce it. I have great doubts about it, and rather agree with Mr. Bather that it is a thing which ought to be carried out.

775. (*Lord Lyttelton.*) But do you adopt Dr. Kennedy's view, that substantially the election does result from the examination; he has rather a peculiar system of marks according to which it practically depends on the school examinations, and each boy knows it?—(*Mr. Warter.*) Yes, I believe that is so.

776. So far as you give any opinion, you adopt that?—Yes, I do not believe that any bad results have followed from it.

777. (*Mr. Vaughan.*) How do you regard the neglect as a precedent?—(*Mr. Bather.*) It is as bad as it can be.

778. Dr. Kennedy has been Head Master for 20 years; when your next Head Master comes, what will be the position of that next master towards trustees who have allowed the Act of Parliament to be suspended for so many years? — (*Mr. Warter.*) Probably the result of what has taken place to-day will be a declaration at the next trustees' meeting at what time the examination shall take place. There is one thing with respect to the facts; *i.e.*, that advertisements have been inserted for candidates, and the result has been, that the boys, measuring their own strength in the school, have agreed among themselves. There has usually been only one candidate.

779. He walks over the course?—Yes, otherwise we should have had our attention drawn to the subject.

780. That does not take place often I believe at other schools?—They have continual examinations and means of measuring their strength, and notwithstanding that, it remains so far undetermined that they run the risk of an examination.

781. (*Lord Clarendon.*) Have you any list, or are you able to tell us how many sons of burgesses born in the town have been educated here, and have you any means of distinguishing those boys? — (*Mr. Warter.*) I think I might get it done; I know the boys who have been educated by Dr. Kennedy, and I have no doubt I can have them classified.

782. Can you tell us whether the burgesses attach much importance to those preferential claims they have to the exhibitions?—Very great importance.

(*Mr. Peele.*) It was with great jealousy they at all admitted even its being intended, in default of the preferential candidates, for the school generally. So jealous were they of that, that acting in the two capacities, for the trustees on the one hand, and the Corporation on the other, it was not very easy for me to reconcile both.

783. (*Lord Devon to Mr. Peele.*) I observe a very large increase of arrears; the arrears at Christmas 1860 very much exceed the arrears in any other year, nearly double; can you account for that?—(*Mr. Peele.*) There was no loss to the fund; it was from one or two of the principal tithepayers not having paid exactly within time. I believe there has not been a single loss.

(*Mr. Warter.*) I can say I recollect it was some large tithepayer who was in arrear.

784. (*Mr. Vaughan.*) Under the part of the scheme which directs what the scholars are to be taught, have the trustees considered the propriety of teaching the physical sciences at all, as part of the education provided?—(*Mr. Warter.*) No. I do not think it has ever been before the trustees. The trustees have never considered the point.

785. Does it occur to you, it is a point which the trustees would entertain?—Subject to the question of funds. I believe that would be the answer. I should think the majority of the trustees would be in favour of it.

(*Mr. Bather.*) My opinion is it would be desirable if it did not encroach upon the ordinary course of education in the school. I should be sorry to see the boys taught anything than that course, as a rule.

The Trustees withdrew.

JOSHUA JOHN PEELE, Esq., examined. *J. J. Peele, Esq*

786. (*Lord Clarendon.*) I believe you are bailiff and treasurer of the school?—I am.

787. In the first part of your answer you alluded to the property of the school, which you say, consists of the school buildings, master's houses, and tithes, a freehold house at Grinshill, two chief rents, and money invested in the public funds; where has that money been derived from?—It arises from savings from time to time, *i.e.*, surplus income. There have been savings from time to time, from which additional exhibitions have been founded, and an additional provision for clerical duties.

788. And that amounts to how much? — To 9,000*l*.

SHREWSBURY.
J. J. Peele, Esq.
23 May 1862.

789. Is there usually a surplus every year?—With the exception of one year, when we had to pay the expenses of this new scheme, which was contested by several persons, which cost us 1,000*l.* In that contest the Corporation took a part, St. John's College took a part, and the Head Master took a part; they were all represented by separate counsel, and we had to appeal from the Vice-Chancellor, who thought there was not jurisdiction to hear the case on petition at all. The consequence was, that in that year we had no surplus at all. In other years we had a small surplus. I may say, upon an average, it would be from 200*l.* to 300*l.*

790. What was the subject of the contest?—The provisions of the new scheme.

791. Who were the promoters of the scheme?—The trustees. The object was this; they wanted to increase the stipends of the clergy, and to make alterations with respect to the exhibitions, both as to period and amount, and to provide residences for the incumbents of the school livings.

792. For what powers did you apply to attain that object?—We applied to the Court of Chancery to frame a new scheme.

793. (*Mr. Vaughan.*) Did you consider that Sir Samuel Romilly's Act gave you power to put aside the provisions of any Act of Parliament which existed?—The present Master of the Rolls, who was Solicitor-General at that time, advised the course which was adopted. The Vice-Chancellor (Sir L. Shadwell) decided there was no jurisdiction, upon which an appeal was made to the Lord Chancellor (Lord Cottenham), who overruled that decision, and the prayer of the petition was granted, and a reference made to the Master, a new scheme framed, and approved by the Court.

794. Was it part of the scheme originally absolutely to overrule the Act of Parliament, or were its objects irrespective of the Act of Parliament, and distinct from the Act of Parliament?—The trustees were the relators, and their object was to get a scheme framed for the management of the school, and we asked for leave to propose a scheme, the object of which was to extend, and in some respects to vary, the provisions of the Statute.

795. What was the ground upon which the Vice-Chancellor considered he had no jurisdiction to frame a scheme?—I think he fancied we were not within the scope of Sir Samuel Romilly's Act, there being a special Act for the purpose.

796. Are you aware whether the scheme was meant to be in any particular contradictory of the Act of Parliament, or contrary to it?—The object was to extend the provisions of the Act, and to deal with the surplus fund.

797. Do you happen to know now whether it is in some respects contrary to the Act?—I believe it is, as to the application of the surplus fund.

798. (*Lord Lyttelton.*) Without knowing anything of it beforehand, would you not take it for granted, that a scheme could not be contrary to an Act of Parliament?—The Court of Chancery decided there was power to make the alterations effected by this scheme.

799. (*Mr. Vaughan.*) Do you think this scheme could have been framed without a consciousness that there were contradictory provisions?—The scheme provides for the additions to the incomes of the clergy, and the founding of more exhibitions was not deemed necessary or expedient, and so far the scheme is at variance with the provisions in the Statute.

800. If the scheme does in any particular conflict with the Act of Parliament, that contradiction was not produced intentionally?—I am not aware of there being any intention to contravene the Act of Parliament in any way.

801. Was there any objection made at the time the scheme was under consideration, to any provisions because they were contradictory of the Act of Parliament?—Many of the provisions were objected to, but whether on the ground of being contradictory to the Act of Parliament, or as being impolitic provisions, I could not now charge my memory. In each case the parties were represented by counsel, and therefore it did not fall so much within my province to discuss them.

802. Was the application made to the Court of Chancery under the idea that the Court would have the power to set aside any Act of Parliament on the subject?—On the part of the trustees there was no intention of applying to the Court of Chancery to over-ride the Act of Parliament.

803. There is a provision in the Act of Parliament (p. 14), "that when any vacancy of an exhibi- "tion shall happen, or in case the person offering "himself as a candidate shall, in the judgment of the "trustees, be unfit and ineligible to have or enjoy the "exhibition, then the money which would have been "applied to the use of the exhibitioner shall be ap- "propriated towards increasing the fund for found- "ing a new exhibition, and also towards increasing "the stipends or salaries of the clergy;" but in the scheme it is said, "for default of such candidates so "born, and deemed eligible as aforesaid, then the said "governors and trustees shall elect so many of such "candidates as shall be necessary as aforesaid with- "out reference to the place of their birth, but accord- "ing to the order in which they shall have been "classed by the said examiners or examiner as afore- "said." Are not those two provisions contradictory, *i.e.*, does not one provide that the money which would otherwise have gone to the exhibitioner had he been a competent candidate, shall go to form new exhibitions, and the other that it shall be transferred to the benefit of other persons in spite of that?—That was the result of much argument, in which St. John's College took a very active part. The trustees considered there were already sufficient exhibitions, and that founding more would not be for the benefit of the school, there not being scholars to compete for the present exhibitions when vacant.

804. I think we heard from Dr. Kennedy that in the meantime other exhibitions had been founded?—The trustees founded two exhibitions between the passing of the Act of Parliament and obtaining the scheme.

805. Are those mentioned in the list of exhibitions?—Yes, and they are just on the same footing under the scheme as the ancient exhibitions as to amount and period of holding. There were four exhibitions founded before the Act passed.

806. In fact, two out of the six exhibitions on which boys are now sent to St. John's College are exhibitions which were founded in pursuance of that clause of the Act of Parliament?—Two have been founded since the passing of the Act of 1798; four exhibitions were founded before the passing of the Act of 1798, two since. The original four were founded of 70*l.* each for seven years. One of the new ones was called the Butler Exhibition in honour of Dr. Butler, of 100*l.* for four years. The scheme puts them all on the same footing of 50*l.* a year for four years.

807. At either University?—No; St. John's College retained their right to have the first four exhibitions continued at their college; the other two are open under the Act to either University.

808. There has been no money, in fact, paid to an examiner?—No; there has not.

809. (*Lord Lyttelton.*) There has been none available for the purpose, has there?—I can hardly say that. We have had a surplus, and out of that I think we could have paid an examiner if one had been appointed.

810. But there has been no such person?—No.

811. (*Mr. Vaughan.*) Has any of the money provided books and instruments for the school?—No; we have paid Dr. Kennedy a certain annual sum for prizes, but we have not paid specifically for books.

812. Nor for a playground?—A playground has been provided at Dr. Kennedy's expense; there has

been no playground provided under that clause of the scheme.

813. You mean none paid for by the trustees?—Yes.

814. (*Lord Devon.*) Does it appear what the surplus has been for the last five years?—I will furnish an account of the income and expenditure. My impression is, that the surplus has been from 200*l.* to 300*l.*, except when we have had unavoidable expenses; for instance, the chancel window of St. Mary's has cost us nearly 500*l.* in one year; and I am afraid there will be a further expense for the stonework of the chancel.

815. Have you anything to do with the repairs of that church?—Only the chancel; we are the owners of a great portion of the great tithes of the parish, about five-sixths, and pay in that proportion to the repairs of the chancel.

816. (*Mr. Vaughan.*) Has that provision of the scheme about opening exhibitions in the University been acted upon?—No.

817. (*Lord Clarendon.*) With respect to the property, after giving the annual value, you say, "The "increase has arisen from the successful close of "questions as to tithe, which were in litigation, and "from increased amounts obtained on the commu- "tation, and from the tithe rentcharges being now "received from the occupiers, instead of the tithes "being let by auction or under leases." Can you rely upon the present receipts as a permanent income?—Yes, I think we may; because the tithes are merged in a charge under the Tithe Commutation Act, therefore, of course it is fixed, subject to the fluctuations and the averages of the seven years.

818. Otherwise you do not expect either increase or diminution?—I think the commuted rentcharges may be taken as the probable average amount. This year it is about eight per cent. more than the commutation, but looking back since the passing of the Act, there has been no great variation. The commutation greatly benefited the trust in preventing litigation; the tithes of one district had been in litigation 150 years.

819. Can you give us any historical account of the right enjoyed by the burgesses to gratuitous instruction at the school and preference claims to the exhibitions?—So far as my impression goes, it is this: with regard to the exclusive and free education of the burgesses, I do not find that either in the original grant of Edward the Sixth or of Elizabeth there is any recognition of a gratuitous education to the burgesses' sons. In the ordinances made by Ashton, the chief schoolmaster (who was authorized to make ordinances under the grant of Queen Elizabeth), he does not speak of the "free" education of burgesses' sons, but he puts them at half the admission fee which others are to pay, viz., fourpence.

820. Perhaps you will read that part of the ordinance?—It is as follows:—"Item, every scholar "shall pay for his admission, viz.:—

"A lord's son - -	ten shillings.
"A knight's son - -	six shillings and eightpence.
"A son and heir apparent to a gentleman -	three shillings and fourpence.
"And for every other of their sons - - -	two shillings and six pence.
"And any under those degrees above-said, and born without the county of Salop - - -	two shillings.
"And any under those degrees above-said and born in the county of Salop - - - -	twelvepence.
"Every burgess's son inhabiting within the town, or the liberties thereof, or of the Abbey Foregate, if he be of ability - -	fourpence.
"The son of every other person there inhabiting -	eightpence."

821. That is the earliest record you have?—I do not know of any earlier. I find that the preferential rights to the exhibitions are recognized in the ancient documents; but I find nothing of the free education of the burgesses' sons until the Act of Parliament.

822. (*Lord Lyttelton.*) Dr. Kennedy, in his printed answer (2, part II.) says: "By reference to the in- "dentures then made, and the schedules of ordinances "attached, it will be seen that the constitution then "framed for the school was in the nature of a com- "promise, having the advantages and disadvantages "of arrangements so made. On the one hand, the "bailiffs and burgesses, having the vantage ground "of King Edward's charter, but also tempted by the "rich offer of Chirbury, consented to surrender their "right of electing the masters to St. John's College, "Cambridge, of which Ashton was a member; but "they stipulated with success for the condition "that the college should be bound to elect burgesses "of the town. Again they consented to accept Mr. "Ashton's ordinances for the regulation of the school, "and to place the chief government in the joint trust "of the bailiffs and Head Master; but they obtained "(what still exists) a first claim for burgesses to all "benefices and founders' exhibitions" ?—(*Mr. Peele.*) The Corporation of the borough, who were all burgesses, gave up the trusteeship. Burgesses alone could be members of the old corporation; and when they gave up the trusteeship to parties who might not be burgesses, they no doubt stipulated for a free education for all burgesses' sons; it was doubtless part of a compromise.

823. That the Head Master should be elected from the burgesses of Shrewsbury; that they gave up?—Yes.

824. And transferred the government of the school to the governors and trustees?—I rather think when they gave up the right of being trustees and having the sole management of the school, they acquired the right of gratuitous education for their sons. I do not think until the Act of Parliament of 1798 there is any document exactly to show that the burgesses were to pay nothing.

825. However, they have got it now?—Yes.

826. They originally elected the Head Master?—Yes.

827. "They obtained (what still exists) a first "claim for burgesses to all benefices and founders' "exhibitions." What is that?—They have now, under the Act of Parliament, a *cæteris paribus* claim to the incumbencies of four livings.

828. Do they still have them?—Yes. The election was endeavoured to be opened in some degree on the ground that the term "*cæteris paribus*," involved the question of the parties proposed being in all things equal; but Vice-Chancellor Wood held, that if the burgess's son is fit and proper, though other candidates may, in the opinion of the trustees, have superior qualifications, he is entitled under the term *cæteris paribus* to the preference.

829. Was that at the time of the scheme?—No; it was a judgment with reference to St. Mary's living in the year 1853.

830. (*Lord Clarendon.*) There is a small trust fund, of which we understand the principal has disappeared, and the interest continues to be paid; I think it was said to have been through some defalcation; and the widow of the testator pays the interest, but there is no security for the continuance of that payment after her death. Do you know anything of that?—That is, I apprehend, Mr. Noneley's exhibition. I knew the testator, who was an eccentric person, and he left his property to his widow, with a direction that she should pay so much a year as an exhibition, without putting the principal, as I have heard, into the hands of trustees.

831. Then it was never a complete endowment?—The trustees have no proof that it ever was.

832. The thing which strikes us as being the most pressing here, (to which your attention has probably been very much called,) i the means which may

SHREWSBURY.
J. J. Peele, Esq.
23 May 1862.

exist of providing for the enlargement and improvement of the school. Does any way occur to you in which that can be effected. Perhaps I may as well mention one of the plans which has been suggested to us: "The governors and trustees have 6,000*l.* in hand, "besides 3,000*l.* appropriated to the purchase of houses "and land from the Rev. T. Butler, as per agreement; "let a further sum of 25,000*l.* be borrowed in deben- "tures of 500*l.* each, thus constituting a capital of "31,000*l.*; let interest on debentures to the extent of "three per cent. per annum be guaranteed by school "revenues"?—I do not see how so large a sum could be borrowed. The trustees ought not to borrow any greater sum than they can safely provide the interest of, and the funds of the trust, unless aided by contributors or from other sources, are not sufficient to justify the borrowing of any large sum; and I am not aware of parties who would lend to such an extent on such security as is suggested.

833. There are one or two plans before us: this is the most practical; but we do not see in what manner that money could be raised or what security could be given for it. The school revenues are far too uncertain to offer any available security?—The school funds are not sufficient, as the accounts will show, to justify a considerable borrowing.

834. (*Lord Lyttelton.*) It depends upon a certain rise in the school revenues in consequence of the increased accommodation afforded; but that would hardly, in the eyes of a mere man of business, be of any value at all, because it is entirely speculative and prospective?—You would not borrow money without charging the tithes as any gentleman would charge his estate, and I think that would be taking too large a sum out of the fixed payments to justify a large expenditure, unless, as has been the case in other places, aid can be obtained from other quarters and independent of a charge upon the school revenues.

835. A considerable increase in the number of pupils, and a consequent increase in the fund, would pay the interest?—Yes; but as such increased revenue would depend on the reputation of the Head Master and on so many contingencies, no prudent man would lend a large sum upon such security. So far as the means of the trustees are concerned, I do not see how more could be done than appropriate either the whole of those consols, or such portion as may be considered advisable after communication with the Charity Commissioners, and with the concurrence and advice of your Lordships. A reasonable portion of the further sum required might, it is hoped, be met by money raised by an appeal to old Shrewsbury men. Unless we are to do that, I do not see my way to the means of so large an expenditure as the question suggests. Certainly, so far as the property to be purchased from Mr. Butler is concerned, it is very desirable to complete that immediately, under any circumstances.

836. (*Lord Clarendon.*) That has been done, has it not?—We have not yet completed it, not having the sanction of the Charity Commissioners.

837. (*Lord Lyttelton.*) The money contributions from old Shrewsbury men would be to meet the possible deficiency in revenue?—It would be to assist in raising a sufficient sum to erect proper and efficient dwellings for the masters and boarders.

838. (*Lord Clarendon.*) Do you not think it would be more attractive to the old Shrewsbury men (many of whom may not be men of much capital), if it were proposed to them to make their contributions either donations or advances of money on debentures, so that they might have some chance of getting it back?—I do not see that we have a right to grant debentures, unless we see our way to payment of interest and repayment of principal; we should be binding ourselves to pay an interest which we have not the means of doing, if 20,000*l.* or 30,000*l.* were borrowed.

839. Would you consider it prudent for the governors and trustees to apply the 6,000*l.* they have to these improvements?—I should think that might be done.

840. (*Lord Lyttelton.*) And the deficiency should be met by donations?—Yes; I see no other mode of safely raising such further sum as may be required.

841. (*Lord Clarendon.*) Would it attract donations to say, "We want 20,000*l.*, and have only "9,000*l.*"?—I hope 20,000*l.* might not be required; but whatever is absolutely necessary, I do not see how it can be properly or prudently stated that we have more than the 9,000*l.* applicable for that purpose If new houses were erected, we, no doubt, should save annually from the amount we now expend in repairs, for which we have nothing to show, and which is a very unsatisfactory item of expenditure.

842. Are you bound to give houses to the masters rent free?—Yes, we are obliged under the Act to provide the masters' with houses.

843. (*Mr. Vaughan.*) Are you obliged to find them boarding houses?—There was no absolute recognition of boarders and boarding houses until the scheme. It is certainly for the benefit of the town and the Foundation that the masters should have a recognized right to take boarders.

The witness withdrew.

Mr. E. Calvert.

Mr. Edward Calvert examined.

844. (*Lord Clarendon.*) You are an assistant master at Shrewsbury?—I am.

845. How long have you been so?—I came first as assistant in August 1852. I had been here previously in February, but only as a kind of private secretary to Dr. Kennedy. In August 1852, I came and took the fifth form regularly; then, in February 1859, I left for a year and a half, and did not come back again until August 1860.

846. You took a school in the colonies?—Yes. I have been here now since August 1860.

847. We understand you have lately taken the superintendence of the non-collegiate class?—Yes, I have.

848. Will you have the goodness to tell us what that non-collegiate class consists of, and what is the system of instruction?—The non-collegiate class was formed about four years since to meet a kind of demand, which appeared pressing at that time, for a more commercial style of education, I imagine.

849. From the people of the town?—I think the pressure came from the people of the town originally; but as that was not at all, in our opinion, the object of the school, we thought it might be met by establishing a class which should prepare the pupil for such employment as did not require a classical, *i.e.*, a scholar-like classical education. Accordingly certain boys, whose parents declared they wished them not to go to college, were allowed to give up Greek, *i. e.*, not to learn Greek at all; and in lieu of that, to give more time to mathematics, modern languages, and English composition.

850. How many boys did this apply to?—The number has varied within very narrow limits; I should think from 18 to 24 would cover all.

851. (*Lord Lyttelton.*) They give up something else besides Greek, do they not?—Latin composition except of the very elementary kind; all classical composition.

852. (*Lord Clarendon.*) How is a boy put into this non-collegiate class?—By the desire of his parent.

853. He is excluded in fact from the sixth form?—He is excluded from the sixth form. One case has occurred of late; that of a boy who is a good Latin scholar, whose father, a solicitor in the town, intended him for his own profession. His progress in Latin was so good that by that alone, without any Greek,

from his general good conduct and the amount of work he did, he got to the top of the fifth form. I saw his father and said, "This must not go on; you "must let him learn Greek."

854. (*Mr. Vaughan.*) How long ago is it that he began to learn Greek?—October 1861. He never saw a Greek book before October with a view to learning it.

855. (*Lord Clarendon.*) He was about how old then?—Sixteen.

856. What has he learned since?—Since then his father has entered him as a private pupil with me, (that is a matter of arrangement between the father and myself, so far as the payment goes,) and the boy has learnt Greek since last October, so thoroughly that with a little preparation he can construe Homer's Odyssey very fairly now.

857. (*Mr. Vaughan.*) If you were to put any chance passage, not very difficult, of the Odyssey before him, say thirty lines, with grammar and dictionary, how long would he be in bringing it up to you?—He would be full an hour.

858. Not more?—Not more; generally he brings his work to me in less. He would have a full knowledge of it in an hour.

859. And would he parse it tolerably well?—He would parse it tolerably well. His great difficulty is with the inflections. He understands Latin so well that he understands the principles of Greek construction so far as they are in common with Latin. His success is not due to quickness; it is his extreme perseverance which has brought him to it.

860. (*A Commissioner.*) Is he competent to join the sixth form in Greek?—Not at present; the amount of work required in the form would beat him.

861. It is his intention to go into the sixth form?—It is his intention to remain at the school two years more, so that he must go to the sixth form sooner or later. He is now at the head of the fifth form, and very deservedly at the head.

862. (*Mr. Vaughan.*) So far as you have been able to learn, has that non-collegiate class given satisfaction to the parents?—I am unable to answer that question. I could only give my own opinion, which I would rather not do. I confess I do not like the class myself.

863. In what respect do you not like it?—I think it tends to encourage indolence to a certain extent.

864. What effect do you think it has had on their advance in those studies, for the sake of which they abandoned Greek?—The results have not been nearly enough for me to form a judgment. We have not been able to trace the course of those who have left us in sufficient numbers to obtain any statistical return.

865. What is the impression left on your mind as to the comparative advance of boys in those subjects, when compared with those who have the burden of the whole school work upon them?—My opinion is they may make an equal advance in those subjects with a slight amount of private tuition, with the whole work upon them.

866. Without the sacrifice of anything?—Yes.

867. In those subjects like Latin, what has been the effect of leaving off Latin composition upon learning to translate Latin into English; have you been able to watch that at all?—No, it has not made any impression upon me. It depends so much on the class of boy who is put into the form. If he is an intelligent boy it makes very little difference to him whether he leaves off composition or not. Again if he were to learn Greek without coompsition he would get his lessons in construing from other boys, probably; not taking much pains himself.

868. Are boys willing to give each other construes?—Perfectly.

869. Notwithstanding their places in the school may depend upon it?—For the daily lessons, I should never dream of a boy offering any objection to give a construe; it was so when I was at school myself.

870. Was there the same system of marks and merit money at that time?—Yes; I think the emulation of boys will not quench their philanthropy, so to speak.

871. (*Lord Clarendon.*) You say it has not quite met the views of those parents who desire a more commercial education for their sons?—I cannot speak of the parents; I have never asked anyone's opinions; I have no information whatever to offer as to the views of the parents.

872. One of the objects of establishing that non-collegiate class was modern languages?—Yes.

873. Can you say whether those boys who are in the non-collegiate class have made any more progress in modern languages than if they had remained in the regular school?—I would prefer that Mr. Bentley should answer that question; he can answer it certainly more satisfactorily than I can. My answer, I am afraid, would not be so favourable, altogether, as Mr. Bentley's. Still he has much better opportunity of judging; he examines the school in modern languages, and those non-collegiate boys are a distinct class by themselves.

874. Modern history is one of the subjects?—Yes; I have that in my own hands now.

875. What do you consider to be the result in that. Do you think they make more progress there in modern history than they would in the regular school?—Yes, they do, certainly.

876. We have seen in the answers of Dr. Kennedy some allusions made to private tuition; but private tuition at Shrewsbury does not quite correspond with our notions of what tuition is in other places?—No; that is the case.

877. It rather seems to be to look after the boys who cannot take care of themselves, and who want competent assistance, and that a private tutor is never given, or never takes pupils among those who are really willing and able to help themselves; is that the case?—The tuition here is certainly the complement as it were of the school teaching, for the private pupils I have taken were boys who wished to get on faster than the form work was taking them on generally. In a few instances I have taken boys to bring them up to the standard of the work to be done upon going into a higher form.

878. The charge for private tuition is made by arrangement with the parents?—Yes; I answered that partly in the return I made.

879. (*Lord Lyttelton.*) The charge is 16 guineas a year?—Yes; four guineas a quarter, I believe, is the charge. If two pupils come together, I give them an hour and a half, and charge three guineas a quarter for each.

880. (*Lord Clarendon.*) It is analogous to the school work, though not the actual lessons of the school?—Yes.

881. You would not read the actual speech of Demosthenes which was read in the school?—No; that is forbidden.

882. You select?—I select at my discretion.

883. (*Mr. Vaughan.*) Are you the only private tutor?—No; any master has the same privilege.

884. Can you state the number of boys in the school who are receiving that sort of private tuition now?—I have five myself at the present time; three single ones, and two that are joint; but one of these is an exceptional case, I take him without making any charge at all.

885. That is one of the cases Dr. Kennedy mentioned, I believe?—He may have mentioned it. I have four others at the present time; and that I should say is about the average.

886. What is the average among all the boys of the school who are taking private lessons in classics?—Those are all who are taking private lessons in classics now, unless Mr. Bentley is giving some very elementary lessons to boys in the lower part of the school.

887. Then it is an exception to the system?—It is an exception to the system, certainly.

888. (*Lord Clarendon.*) The boys you have as private pupils would manifestly have an advantage

SHREWSBURY.
Mr. E. Calvert.
23 May 1862.

over other boys in the school?—To a certain extent.

889. They are boys who think it worth while to pay for it?—Yes; one of the boys I have now wished to go up for a scholarship at Oxford. He worked very hard, and got the scholarship, and now he is with me preparing for residence at Oxford. He is doing composition and translation. It is precisely on the principle of a private tutor at Cambridge.

890. Like a private tutor at Cambridge, not like a private tutor at Eton?—No.

891. (*Mr. Vaughan.*) Do I understand there has been recently appointed a private tutor of a different description?—The appointment has been made, and I hold the appointment; but until next half year the system will not be arranged. It is not in operation at present.

892. It has been made within the last three months?—It has been made within the last six weeks.

893. (*Lord Devon.*) "A master is now appointed "to superintend the private tuition of all boys below "the sixth form"?—That office I have accepted, but it does not come into operation until next half year.

894. (*Mr. Vaughan.*) What was the want which existed in the school, which Dr. Kennedy conceived he met by making that new appointment?—I may divide my duties into two branches, pulling up the backward, and pushing on the forward boys. That will be a complicated thing to carry out; every form will have to be separated in the working of it. I have had a good deal of thought about how it is to be done.

895. Would not that interfere with the system of tuition already established?—Dr. Kennedy, in making me the offer, said it need not, but I undertook to throw up private pupils altogether; I hope to make it supersede private tuition altogether.

896. (*Lord Lyttelton.*) The non-collegiate system, though a little complicated in its arrangement, is found to work without difficulty?—It works without difficulty.

897. There is an interchange of boys from one to the other?—Yes; but at the present time, as I am relieved from the other form work, the difficulty is much lessened, for they get the whole of my attention.

898. (*Lord Clarendon.*) Have you any suggestion you wish to make to us upon any particular point?—I think I would rather consider it; if I have any suggestion to offer, I will make it in writing.

The witness withdrew.

Rev. G. W. Fisher.

Rev. G. W. Fisher examined.

899. (*Lord Clarendon.*) I believe you are an assistant master at Shrewsbury?—Yes.

900. Mathematical master?—Yes.

901. How long have you been so?—Two years.

902. Were you mathematical master from the first?—Yes.

903. How many boys have you in your class?—I have the whole of the boys in mathematics.

904. The whole of them?—Yes, the whole school, so far as mathematics are concerned.

905. Mathematics are now part of the regular studies?—Yes.

906. And therefore compulsory?—Yes.

907. Compulsory on the whole of the school?—Yes, the whole school.

908. And the whole school is under you?—Yes.

909. In what manner do you divide the school?—It is divided according to the classical division.

910. How many do you take at a time?—Each form, or nearly each form, is divided into two divisions; and generally I have a division separately, but sometimes I have the whole of a form at once. For instance, I have the sixth form for a two-hours' lesson once in the week, and I have the præpostors of the sixth form by themselves, generally for one hour.

911. You have all the boys of the lower school in?—The boys of the lower school I have together always.

912. How many are they?—About 34, I think.

913. And these are for arithmetic, I think?—Yes; for arithmetic.

914. You have some assistance, have you not?—None at all.

915. How far do you go in mathematics?—That depends on the boys. About the best boy we have got now is pretty far advanced in differential calculus, having of course previously read the more elementary subjects.

916. He is a præpostor, I suppose?—Yes, he is the third boy in the school, I think.

917. (*Lord Lyttelton.*) Is there any fixed amount of time given in the week by præpostors?—Four hours a week.

918. Take part of the lower school, do those boys do four hours?—All the boys do four hours, except lower sixth; they have only three hours.

919. The lower school who do arithmetic rather than mathematics, do they do the same amount of work, four hours?—Yes, exactly the same.

920. How do you find them prepared on coming to the school; they come generally at about the age of ten or eleven, I presume, seldom younger?—Seldom younger.

921. Do you find them mostly well prepared in arithmetic?—Most of the younger boys can scarcely be said to have been prepared at all before coming. but a great many boys come at a more advanced age, and they are better prepared, of course; much better.

922. You do not find the other teaching of the school conflict with the mathematical teaching?—No. The chief drawback arises from the chief lessons coming in the afternoon, so that the half-holiday occasionally interferes.

923. Did you allow for that in the four hours a week?—I am speaking only of the extra half-holidays.

924. (*Lord Clarendon.*) The same proportion of marks are given for mathematics as for classics in the examination?—About one-sixth of the total marks.

925. As 600 to 3,000?—Yes.

926. I see the proportions are, Greek and Latin authors 600 marks for four papers; mathematics, including arithmetic, 600 marks for three papers?—I have never given 600 marks for three papers.

927. That is in mathematics?—There are always more than 3 papers. Whatever number of papers there are, only 600 marks are given. The papers, of course, vary with the amount of reading the boys have had in the form. If in the form no boys have read differential calculus, the subject would not be included.

928. It is rather an unusual boys' performance to get to differential calculus?—Yes, it is; there have been about seven boys who have read more or less of it since I have been here.

929. A boy of average ability will go as far as mechanics, dynamics, trigonometry, and a fair amount of algebra?—Boys of average ability seldom get beyond trigonometry.

930. Going further with a boy, I take it, would be to enable him to enter at the University?—Yes.

931. Have you examinations in mathematics as well as classics?—Yes, it takes place about the same time; the boys are classified.

932. Have you prizes of pretty nearly the same sort, which are given for classics?—Yes.

933. (*Mr. Vaughan.*) Is it generally the case that the best classical scholars are also amongst the best mathematicians in the school?—No, certainly not.

934. Not the very highest mathematical scholars, but short of that are there in the general run of good

mathematicians some of the best classical scholars?—They are not the best, but they are generally average classical scholars.

935. (*Lord Lyttelton.*) Studious boys in mathematics will be studious boys in classics?—Yes.

936. (*Mr. Vaughan.*) Has that studious disposition the effect of bringing any up amongst the highest of both?—It has in some cases, I think, though not generally; but at any rate it has the effect of bringing them up to a fair average in mathematics.

The witness withdrew.

Mr. T. A. Bentley examined.

937. (*Lord Clarendon.*) I believe you are an assistant master at Shrewsbury?—I am.

938. How long have you been here?—Upwards of twenty years.

939. You take the modern language department?—Yes, I do.

940. Have you taken that department from the first?—Yes.

941. Do you teach French?—French and German.

942. You teach German as well as the Head Master?—The Head Master does not teach German.

943. German is not at all compulsory?—No, it is not.

944. You were at a French school, were you not?—Yes; I was at a French school in Paris, when I was a boy.

945. Where did you learn German?—In Germany. I was two years in Paris, and three years in Germany.

946. I believe you have very much under your charge, at least so far as the modern language department goes, the non-collegiate class?—Yes; the additional instruction they receive in French is given by me.

947. Do you give them more instruction than you do the other classes in the school?—Yes, they have one additional lesson.

948. Amounting to how much in the course of the week?—They have just one additional lesson to what they would do in their several forms. They come to me together as a separate form, and work in the same manner then as the regular school forms.

949. One of the objects of establishing that non-collegiate class, in consequence of which they drop both Greek and Latin composition, is that they may devote themselves more to modern languages?—Yes. During certain Greek lessons the non-collegiates of the fifth form join the French lesson of the fourth form. The extra lesson which they receive separately I have already explained.

950. Should you say the non-collegiates make more progress in modern languages than the other boys?—No, certainly not; they are originally the most illiterate of all.

951. (*Lord Lyttelton.*) For how many hours a day does a non-collegiate boy come to you?—A non-collegiate boy with me has about four hours a week.

952. And a collegiate boy less?—One hour, if the form is divided; two hours, if the whole form come together.

953. In some cases a boy who is collegiate gets one hour?—Yes.

954. (*Mr. Vaughan.*) Is it possible that with three hours a week more than the collegiate boys the non-collegiate class does not make more progress?—At the original formation of the non-collegiate class and subsequently it has been joined by a class of boys who imagined that by doing so they would escape a portion of their regular form work. This being the case with *the majority*, the progress of the form has not been in proportion to the time devoted to it, nor can I for one expect that it should be.

955. Do their parents countenance it?—Yes.

956. (*Lord Clarendon.*) Is it generally at the requirement of the parent?—Yes.

957. Then as to the general school, you say you do not give them above either one or two hours a week?—One or two hours.

958. But in a great number of cases I understand two hours?—The lower school has two hours at separate times, and the fourth form two consecutiv hours.

959. And the sixth form who are præpostors?—They generally get one hour; they have to prepare longer lessons, from a more difficult book.

960. In general I suppose boys leave Shrewsbury with a very slight knowledge of French?—I consider that a boy who beginning, say, in the fourth form, has reached the lower sixth will by that time, if he have paid average attention, have acquired a fair knowledge of French.

961. (*Mr. Vaughan.*) What classical French author could they translate if you were to put it into their hands and give them time to turn it over?—I do not mean to say a boy would be able to understand all the idiomatic expressions of Gil Blas, for example, but if the work were historical many sixth form boys would be able to read it off.

962. (*Lord Clarendon.*) Take Saint Simon, for instance?—Yes.

963. (*Mr. Vaughan.*) Or La Fontaine; both in idiom and vocabulary that is difficult?—I do not think he would.

964. What would he do with Molière?—I think he could manage Molière pretty well.

965. (*Lord Lyttelton.*) You have nothing in the nature of conversation classes; they have no practice in speaking?—No, I do not think that would succeed at a public school. Most public schools I know have abandoned conversation classes, because they insisted on all talking together. They imitate each other's mistakes.

966. How do you find them as to the state of preparation they come in?—The reason I think they do so much in the short time I have, is that I insist on the lesson being prepared.

967. In school?—No, out of school.

968. I meant as to the state of preparation in which new boys come to the school?—Some boys come knowing a good deal of French; two came lately, one who is now a præpostor, who can translate anything.

969. But if boys come at 10 or 11?—In that case, with very few exceptions they have to begin, and the progress of the form is as a consequence considerably impeded.

970. It would be of great value then, that they should have some degree of grounding?—Yes.

971. As to pronunciation, have you great difficulty in getting them to pronounce pretty well?—Yes; some two or three of them have been obliged to give it up altogether. They generally read the French before they translate.

972. (*Lord Clarendon.*) French does not enter into the general examinations, I think?—Not into the general examinations, but there are prizes given for the best scholars in each form, and in order to find them out, I have an examination in each half year.

973. The examination is conducted by you?—Yes.

974. And it is upon your report the prizes are awarded?—Yes; I cannot always make up my mind; two or three boys will perhaps have been working equally well. I decide upon the examination.

975. The prizes are awarded accordingly?—Yes.

976. (*Lord Devon.*) An examination does not take place in every case. If you have a boy who is *facile princeps*, you decide without an examination?—No; I have always an examination.

977. (*Lord Lyttelton.*) Do you exercise them in French composition?—Yes.

SHREWSBURY.

Mr. T. A. Bentley.

23 May 1862.

978. Is that original composition or translation?—Translation.

979. (*Lord Clarendon.*) Do they translate from French into English *vivâ voce*?—Yes, construing, on the same plan as with the other masters. That is giving a liberal translation, rendering the sense accurately, but freely.

980. (*Lord Devon.*) Have you any boys learning German now?—There are some boys in the sixth form learning German. They took it up the half year before last. They are so intelligent, that in the first six months they will acquire more than other boys in three years. In six months the head boy was able to appreciate Schiller's Wallenstein with great ease, so that I am led to think it is not desirable for boys to take up German until they are tolerably high in the school.

981. (*Lord Lyttelton.*) Does it occur to you to suggest any improvement in French and German, without breaking up the system of the school?—The only improvement would be to give more time to them.

982. (*Lord Clarendon.*) French being part of the school *curriculum*, is not optional?—It is not.

983. Is German?—German is optional.

984. May they take French or German, *i.e.* choose between them?—No.

985. French is compulsory?—Yes; they require special instruction in German.

986. (*Mr. Vaughan.*) Have you any fresh classification of the boys in the form different from the classification of the form itself; for instance, in the fifth, do boys remain in the classification of the upper and lower fifth?—They do.

987. Do you make any difference between the upper and lower fifth in French?—No; we take the form as it is.

988. So that you keep up the organization of the school in classics?—Yes.

989. And keep the boys exactly in the same order?—Yes.

990. How do you do about keeping their places?—If they come to me the whole form together, say the fourth form, of course I have my own separate division; I give those who are more advanced a larger quantity to prepare.

991. Then your lower division is not necessarily coincident with the lower division in the school?—No.

992. You re-arrange the particular form for the work as you please?—When I get the fifth form I do not; I find they are generally up to the work.

993. (*Lord Lyttelton.*) You give extra instruction to private pupils?—To four or five.

994. Is that charged at the rate of eight guineas a year?—Yes.

995. Is it an additional payment to yourself?—Yes.

The Head Master of Shrewsbury School subsequently asked leave to make the following communication in writing:—

Shrewsbury,

Sir, Sept. 12, 1862.

In justice to Shrewsbury School I respectfully request that Her Majesty's Commissioners will be pleased to receive a short supplement to my evidence in answers 335–339.

As it had been suggested by one gentleman on several occasions that old Shrewsbury men had been deterred from sending their sons to the school by the remembrance of ancient discomforts, although I could point to the names of many boys among my pupils whose parents had been educated here, it was nevertheless out of my power to give a direct denial to an alleged fact and motive respecting which I had only very limited information. But as to the *justness* of that motive at the present time I refrained from making that full and particular statement to the Commissioners which I now think it my clear duty no longer to withhold. That statement mainly consists in a comparison of the accommodations afforded to boarders of the Head Master in 1836, when Mr. Bather was at school, with those afforded at the present time, and for the last 15 years or more.

In 1836 the boarders in the Head Master's house were, in number, from 45 to 50:

Now the maximum is 35, the present number, 30.

In 1836 a single bed was a luxury for which an extra charge was made:

Now single beds are the rule for all.

In 1836 there were two sitting rooms and ten bed-rooms for 45 or 50 boys:

Now there are three sitting rooms, *in the house*, and 11 bed-rooms for 30 or 35.

In 1836 none of the bed-rooms were ventilated:

Now all are ventilated.

In 1836 the 45 or 50 boys, during the season of short days, remained in the house from 4.50 p.m. to 7.50 a.m.:

Now the great school is used as a sitting room from 7 to 9 p.m. daily.

In 1836 there was only one water-closet for the use of 45 or 50 boys:

Now there are two for 30 or 35.

In 1836 there was but one common washing room, brickfloored, for all the boys in the house:

Now every boy has washing materials in his bed-room, and the washing-room also for occasional use.

In 1836 bread and milk, occasionally bread and butter, were supplied for breakfast, and bread and cheese, with beer, for the evening meal:

Now tea, sugar, milk, and bread and butter, are supplied morning and evening.

In 1836 pudding was served at dinner before meat:

Now conversely.

In 1836 lights were put out at 9.15 P.M.:

Now at 10 15 P.M.

Other details might be added, but these, I trust, may be sufficient to prove that the reminiscence of arrangements in 1836 is no fair measure of the accommodations of the school in 1862.

The real defects of convenience in our houses are felt and admitted by all who know them; but the healthiness of the boys, their love for the school, the sorrow with which they leave it, and the pleasure with which they revisit it, combine to show that, whatever older men may or may not feel, Salopians of later years do not look back to the school as a place of discomfort, or to the years passed there as the least happy of their experience.

I am, &c.

(Signed) Benj. H. Kennedy.

Mountague Bernard, Esq.

&c. &c. &c.

Victoria Street, Friday, 19th December 1862.

PRESENT:

Earl of Clarendon.	Sir Stafford Northcote.
Earl of Devon.	H. Halford Vaughan, Esq.
Lord Lyttelton.	Rev. W. H. Thompson.
Hon. Edward Twisleton.	

The EARL OF CLARENDON in the Chair.

Charles Edward Graves, Esq., St. John's College, Cambridge, called in and examined.

C. E. Graves, Esq.

19 Dec. 1862.

996. (*Lord Clarendon.*) How long were you at Shrewsbury?—Five years.

997. When did you leave?—In October 1858.

998. You have since been at St. John's College?—Yes.

999. You have taken your degree?—Yes.

1000. Have you graduated in honours?—Yes.

1001. What in?—Second classic.

1002. (*Mr. Thompson.*) Second in the first class of the classical tripos?—Yes.

1003. (*Lord Clarendon.*) Will you have the goodness to tell us what were the relations between the town boys and the school boys at Shrewsbury. Did they live on a footing of equality together?—In the school very much so, but out of school generally they did not see much of each other, especially in the lower part of the school.

1004. Socially speaking, there was no difference whatever?—No.

1005. (*Lord Lyttelton.*) Did they play at cricket together?—Some of them; such as chose.

1006. They would be allowed to do so?—Yes.

1007. But as a custom, they went home?—As a general rule they went home.

1008. (*Lord Clarendon.*) You were a town boy?—Yes.

1009. What was your position with the school boys; did you generally go home, or stay and play at cricket with the boarders?—Such of the boys as chose would stay and play with the boarders. I did not play at cricket; I could have done so if I had chosen. I was on a perfect footing of equality in every respect with the boarders.

1010. In fact in the upper part of the school, there was no social distinction between the two?—No; not in the upper part of the school. If a boy put himself forward he would be always received.

1011. The advance must be made by him?—Yes, the advance must be made by him.

1012. Did the monitorial system prevail at Shrewsbury?—The upper sixth form were præpostors.

1013. What were their duties and powers; they were not regular, I think?—No; I do not fancy they were distinctly defined. We never knew exactly. They were supposed to look after the boys in general, and they had the power to inflict punishment, but it was only occasionally that that power was exercised.

1014. In what way had they power to look after the boys?—They looked after them when they were out of school.

1015. Had they any duties in school?—No.

1016. Not to keep order, and so on?—Not at all.

1017. Out of school, would they check a boy for doing anything wrong?—Yes.

1018. So far as that, the præpostor's authority was admitted?—Yes.

1019. What punishments could they inflict?—I do not know of any instance of a punishment being inflicted, but they had the power of setting impositions to a certain extent I believe, and of caning the boys.

1020. (*Lord Lyttelton.*) Did you ever know any impositions set by them?—I heard of one, but there was not one, that I am aware of, set all the time I was there.

1021. (*Mr. Twisleton.*) It was merely talked about?—Merely talked about as an instance of a punishment having been set by them. Their authority however, whenever they chose to interfere, was always admitted.

1022. (*Lord Clarendon.*) Public opinion supported it?—Yes.

1023. During the time you were at Shrewsbury, was there much drinking among the boys?—I do not think there was much.

1024. There was a little?—There was some, I fancy, amongst a portion of the boys.

1025. Did they go to public-houses?—I think so.

1026. Was the town out of bounds?—It was, the greater part of it.

1027. Their going to public-houses would be an offence against the school discipline as well?—Generally speaking, it would be.

1028. The school does not lose sight of the town boys when they go home; they have to report themselves as being in at certain hours of the night have they not?—No, not at all. The school has nothing whatever to do with the town boys, except in those cases in which the parent chooses not to interfere, and desires the school to exercise any discipline. I have known two or three instances of boys being sent into lodgings, and their parents wishing them to have the school discipline applied, and in such cases they would have to be in at certain hours, to appear at callings over and to keep bounds, the same as the boys.

1029. They are obliged to wear caps, are they not?—Yes, except the upper sixth.

1030. Except only the præpostors?—Yes.

1031. Was that introduced whilst you were there?—No; it was always the custom to wear caps when I was there.

1032. (*Mr. Thompson.*) Were they compelled to wear them at all times?—The town boys were not.

1033. (*Lord Clarendon.*) A schoolboy that lives in the school, if he goes out to walk in the country, must have his cap on, I suppose?—Yes.

1034. Would the town boys be required to wear them under similar circumstances?—No; and there was a feeling that they ought not to wear them, except when they were in the school, and under the same regulations as the other boys.

1035. Do the town boys wish to wear the cap at all?—Not at all, nor do the rest of the school wish them to wear them, indeed if they found out any instances of their wearing them, they would tell those boys that it was not usual to do so.

1036. They would tell the town boys so?—Yes; that it was not usual.

1037. If it were thought desirable that the schoolboys should wear the cap, why should not the town boys wear it?—I suppose it was because the schoolboys were under discipline out of school, and the town boys were not.

1038. Should you say that the drinking of which you spoke was confined to a small set?—I think so.

1039. Would the præpostors interfere as far as they could to check it?—I never met with any instance of interfering or declining to interfere.

1040. Would the public opinion of the school be against the drinking set?—I do not think it would be much against it at the time to which I refer.

1041. Was the tone of the school, in your opinion, of a high character; was there an honourable and

SHREWSBURY.

C. E. Graves, Esq.

19 Dec. 1862.

gentlemanlike feeling, a feeling in favour of honourable conduct, and a reprobation of such vices as lying, or anything mean?—I think so, decidedly.

1042. You think a boy, caught in a lie, would be exposed to the censure and reprobation of his companions?—Generally so, I should think; decidedly in the upper part of the school.

1043. (*Mr. Vaughan.*) Was there not a set of boys at Shrewsbury, neither boarding at school nor at home, but boarding in the town with tradesmen?—Yes.

1044. Was that a numerous class?—Not very.

1045. Were the tradesmen selected by the parents?—Yes.

1046. Were they persons who carried on that system as a sort of trade, or did they happen to be individuals with whom the parents were acquainted, and whom they could trust?—I fancy so. It was quite a private arrangement between the parents and the tradesmen.

1047. Do you know what sort of discipline was exercised over the boys in these cases?—In the only two instances in which I knew the boys well in such a position I do not think there was any discipline exercised. I knew two very well.

1048. Did the school discipline ignore them out of school hours?—If they had done anything decidedly wrong, and it had been complained of to the schoolmaster, he would have taken notice of it.

1049. Do I understand you to say that there was no check over them?—No; they were left entirely to themselves, and the people they were placed with.

1050. And were such persons in the habit of taking cognizance of their conduct?—In the two instances of the boys whom I know there was no necessity for doing so.

1051. These boys were naturally well conducted?—They were boys naturally well conducted, and they were placed with persons who were known to their parents.

1052. Have you ever heard of any abuse of that system?—No; I never heard of any.

1053. Did it generally happen that boys committed to that sort of care, were boys whom their parents had good reason for trusting?—I think so. Very probably the Head Master would not have consented to the arrangement without having received some assurance of that kind.

1054. Does the same rule about the cap apply to them as to the other town boys?—They do not wear the cap.

1055. Not at any time?—Except in going to and returning from school.

1056. Did you mention the number of boys of that class out of 100 at Shrewsbury school?—I did not. I did not myself know more than these two, but I fancy there may have been more.

1057. (*Lord Clarendon.*) Was there a great deal of fagging at Shrewsbury in your time?—Not much.

1058. Who had the power of fagging?—The præpostors.

1059. Only the præpostors?—Yes.

1060. How many præpostors were there?—The number was 12 at the time I was there. Sometimes there were a few more, sometimes one or two less.

1061. Did they exercise the power of fagging in moderation?—Yes, decidedly.

1062. (*Lord Lyttelton.*) Had the fags any specific duty to do inside the house?—They had to get the things for the breakfast of the præpostors. I think that was the only regular duty they had to do.

1063. Had the fag a master of his own, that is to say, was there a fag to any particular boy?—No; there were three or four appointed for the whole of the præpostors, but they changed.

1064. How often did they change?—I do not remember whether it was every day or every week; I think it was every day.

1065. (*Lord Clarendon.*) I suppose you knew nothing about the lodgings, the rooms that the boys had in the boarding houses?—I only know what I have heard; I have seen the downstairs rooms.

1066. What did you hear about the lodging house rooms?—With respect to the rooms I have not heard much said one way or the other.

1067. What rooms did you hear anything said about?—The small rooms for the lower sixth form and the præpostors; the lower sixth form generally grumbled at their room as being very close and hot.

1068. They are not the rooms they slept in?—No.

1069. What rooms were they?—The rooms they read in.

1070. (*Lord Lyttelton.*) Did they make any complaint of the dining room in the Head Master's house?—No, I never heard of any complaint about that.

1071. Nor of the furniture or accommodation of the bed rooms?—No, I never heard the bed rooms spoken of.

1072. (*Mr. Thompson.*) Have you heard that any improvements have taken place?—No.

1073. You have not heard that additional houses have been rented for the purpose of supplying studies for the præpostors?—No; there was a house which was used for studies when I was there, opposite the master's house.

1074. Was that in operation then?—There was a house with a great many little studies in it.

1075. Even that did not stop the complaints you spoke of?—The studies were not used after locking-up time.

1076. So that it was in the evening that the grievance arose?—Yes; in the daytime the studies were used.

1077. (*Lord Clarendon.*) You did not live at the school. I suppose you boarded in town at your own parents' house?—Yes.

1078. Were your parents generally resident there, or did they come merely to reside when you were at school?—They came to reside there for the sake of the school.

1079. I suppose you went home to meals at the same time that the other boys had their meals in the school?—Yes.

1080. Did you ever hear whether the quality of the food given at the meals was satisfactory to the boys?—They used to complain, but boys always do complain.

1081. Of what did they complain, bad meat, not enough, or what?—They did not say they had not enough, but they occasionally complained of the quality.

1082. You did not often dine with them?—No, never.

1083. I suppose you spent your Sundays in the same way that the other boys did; did you not?—Pretty much so, I fancy.

1084. (*Lord Lyttelton.*) Were you not more at home on Sunday than on any other day?—We had the morning at home, after a lesson at 8 o'clock.

1085. (*Lord Clarendon.*) Did you go to church with the other boys?—No.

1086. You went with your parents?—Yes; in the afternoon I went to the school chapel.

1087. (*Lord Lyttelton.*) Was that the regular arrangement with regard to the town boys, to go to their own church in the morning, and to the school chapel in the afternoon?—Yes. Formerly, they used to go with the other boys, but there was an alteration in the seats, in consequence of which there was not room for more than the boarders.

1088. (*Lord Clarendon.*) What lessons were there on Sunday?—One lesson in the Greek Testament, and there was Scripture history.

1089. In the morning?—In the morning, from 8 to 9 o'clock.

1090. Did the whole school do that?—The whole school would do the same, or some similar lesson.

1091. The whole school would do the same lesson?—Yes, with the same masters as on other days.

1092. And in the same classes?—In the same classes.

1093. Was the Greek Testament read, and did the master ask questions about it; that is to say, about what was being read?—The Head Master used not to ask many questions, but he used to give a good deal of explanation, and he used to construe it over to us. Sometimes we did not construe it at all ourselves, but he went over it, and gave the explanation.

1094. That was the subject, not the Greek?—The subject.

1095. What other religious instruction was given besides the Greek Testament?—Scripture history.

1096. What Scripture history?—Sometimes it used to be Wheeler's Analysis of the Old Testament; sometimes New Testament history, and sometimes we did questions compiled from the Old Testament from a book. I do not know how it came into existence; but it was a manuscript book with questions. Then we did the History of the Reformation.

1097. From whose book?—Pinnock, when I was there. But the book kept changing.

1098. (*Lord Lyttelton.*) Did you do the catechism?—No.

1099. (*Lord Clarendon.*) Were the questions asked, or did you write them down?—We wrote out the answers to them. I am not quite certain whether we wrote them out to go up in order to read them off. I am not sure whether we only did so for convenience.

1100. Then there was the chapel in the afternoon. After dinner, was it?—Yes.

1101. What did you do after chapel on Sunday?—The day boys had no lessons, or anything to do with the school after chapel. They went home.

1102. They passed the rest of the time with their parents?—Yes.

1103. Do you know what the other boys did?—No.

1104. Used the day boys to go and take long walks out into the country with the other boys in the afternoon?—Not generally. They would have tea at six o'clock, and that would interfere, to some extent, with long walks.

1105. There was a good deal of private reading at home, for the preparation of the lessons next day, I suppose?—A good deal.

1106. How many hours should you say?—It varied very much; but on the average, I should say three or four hours.

1107 (*Lord Lyttelton.*) Besides the work in the school?—Yes.

1108. (*Lord Clarendon.*) How many hours in the day should you say there were in school, taking one day with another?—The regular number, except on half-holidays, was five hours in school.

1109. (*Lord Lyttelton.*) That would make eight, with the work to be done in the day?—In the sixth form there would be rather less than five hours in school in the day.

1110. (*Lord Clarendon.*) How many half-holidays would there be in the week?—There was one regular one; generally speaking, there would be an extra one, and there would be two days in the week when we were only one hour in school in the afternoon, instead of two.

1111. (*Lord Lyttelton.*) Did you ever suffer in health from the work being too much?—I never did.

1112. Did you hear of any of the other boys suffering from that cause?—No.

1113. What help did the boys get from private tutors?—Not much; it was quite an exception doing anything with private tutors when I was there.

1114. Private tuition was recognized in the school; the boys might have it?—They might; but it was not a part of the school system; it was rather a private arrangement of the boys.

1115. You mean that one of the tutors in the school might give a boy private tuition?—Yes.

1116. (*Mr. Vaughan.*) Was there any one of the masters whose duty it was to attend to that private tuition specially?—No.

1117. (*Lord Clarendon.*) A boy would probably not be so well looked upon, who had a private tutor?—He would not be looked on with disfavour. The only two instances I have known in which they had private tutors, was when they were going to the university; when they did some extra work.

1118. (*Mr. Thompson.*) Mathematical?—Classical.

1119. (*Lord Clarendon.*) Are there not many of the boys who prepare for going to the university, who do not obtain for themselves the benefit of private tuition?—Yes; it is quite an exception that they should do so.

1120. (*Mr. Thompson.*) Should you say that the most brilliant boys had or had not private tuition?—They had not; but if a boy thought himself not sufficiently prepared to go up to the university, he probably would have a private tutor.

1121. (*Lord Clarendon.*) There was no difficulty in getting that assistance?—No; none whatever.

1122. (*Mr. Twisleton.*) Were there persons at Shrewsbury, who professed themselves to be private tutors?—One of the masters at the school would act as a private tutor.

1123. (*Lord Lyttelton.*) Do you find at Cambridge that the Shrewsbury boys come up with a greater amount of reading than from other schools?—I fancy very much the same.

1124. (*Mr. Thompson.*) How much would a boy who was likely to distinguish himself, have read when he left the school. How many Greek plays would he have read?—I do not at all know.

1125. A dozen?—Not so many as that.

1126. (*Lord Lyttelton.*) Had you read the whole of Æschylus and Sophocles?—About half of Æschylus, and about half of Sophocles.

1127. (*Mr. Vaughan.*) What plays had you read?—The Persæ, the Seven against Thebes, the Agamemnon.

1128. Not the most difficult?—They would be taken in order, and when we came to any particular one it would be read.

1129. (*Mr. Thompson.*) Of Sophocles, you say you had read nearly the whole?—About half.

1130. Had you read anything, or how much of Thucydides?—About four.

1131. Of Herodotus?—About two books.

1132. Any of the Dialogues of Plato?—Three or four.

1133. Can you name them?—Menexenus, Euthydemus, Protagoras. I do not know whether I have read any more.

1134. (*Lord Lyttelton.*) Had you read Homer?—Not the whole of Homer.

1135. Any of Ovid?—Two or three books; I fancy four in the Iliad, in the sixth form.

1136. (*Sir S. Northcote.*) Did you read any of Aristophanes?—Three or four plays.

1137. (*Mr. Vaughan.*) Had you read any of Pindar?—Yes, the whole of Pindar, I think.

1138. (*Sir S. Northcote.*) Are there any other Greek books besides, which you can mention?—Yes; I have read some more, but I cannot think of the names.

1139. (*Mr. Thompson.*) Had you read Xenophon?—I had read some of Xenophon, in the fifth form.

1140. Had you read any collection of Epigrams?—Yes, a small collection.

1141. (*Mr. Vaughan.*) Had you read any of Theocritus?—Yes, a little of Theocritus in this collection.

1142. Any Hesiod?—Yes, I had read the "Works and the Days."

1143. (*Lord Lyttelton.*) Any of Demosthenes?—Yes, a great deal of Demosthenes.

1144. (*Mr. Thompson.*) You seem to read about twice as much as the boys from any other school?—I have been putting down all that I have read in the course of five years.

1145. (*Lord Clarendon.*) Do you think a majority of the boys have read as much as you?—Probably, among the præpostors.

1146. (*Mr. Vaughan.*) Now we will come to the Latin. Had you read Juvenal and Persius?—Juvenal, not all of Persius.

SHREWSBURY.

C. E. Graves, Esq.

19 Dec. 1862.

1147. Propertius?—We had a book with a quantity of selections from the Latin poets. I do not recollect what was in it.

1148. Did you read Virgil through?—No.

1149. The Georgics?—The Georgics, and one book of the Æneid; probably not all the Georgics.

1150. Horace?—I think we read Horace all through.

1151. Catullus?—Not the whole of Catullus. There might be one or two poems of his in the selection I have mentioned.

1152. (*Lord Lyttelton.*) Did you read Livy and Tacitus?—We read some Tacitus, but very little Livy.

1153. (*Mr. Vaughan.*) Did you read Cicero's Epistles?—A few of them.

1154. (*Lord Lyttelton.*) Did you read the speeches of Cicero?—Three or four of the speeches.

1155. Any of his philosophical writings?—Yes.

1156. (*Mr. Vaughan.*) Any of Terence?—I think one play.

1157. Plautus?—We did one play of Terence and one of Plautus.

1158. (*Mr. Thompson.*) In school or by yourselves?—In school.

1159. In all these things that you have named, did you read the books with Dr. Kennedy, or any other masters?—Most of them with Dr. Kennedy.

1160. That did not include what you may have read in private?—I did not do any private reading at all, scarcely.

1161. (*Lord Lyttelton.*) Did you do the exercises out of school, or in it?—The composition out of school.

1162. At home?—Yes.

1163. (*Mr. Vaughan.*) Did you learn history by itself unconnected with the Latin and Greek writers?—Classical history.

1164. (*Mr. Twisleton.*) Take Thirlwall, for instance?—We used to read Dr. Smith's History, and there was also another history book that we read.

1165. You had gone through the whole of the Greek history before you left school?—We used to get it up from a small book by a German, written in Latin.

1166. (*Lord Lyttelton.*) What Roman history have you read?—Liddell's; we used to get it up in school from the small Latin book, and out of school to read what we chose in addition.

1167. (*Mr. Vaughan.*) Are you at St. John's?—Yes.

1168. Did you get one of the exhibitions?—Yes.

1169. How long had you been under the Head Master before you got one of the exhibitions?—Four years.

1170. Were you a much longer time under him than most of the boys who succeeded in getting exhibitions?—We do not get exhibitions when we are still at school. It depends entirely on whether there is one for us at the time we leave.

1171. Then it is uncertain how long any boy will be in the sixth form under the Head Master?—Yes.

1172. Were you much above the average time under the Head Master?—No, I do not think so.

1173. How long were you at Shrewsbury altogether?—Five years.

1174. And four years out of the five you had the benefit of the Head Master's teaching?—Yes.

1175. Was that anything like the common proportion of the time spent in the different parts of the school with the boys who distinguished themselves afterwards?—I think so.

1176. (*Lord Lyttelton.*) You attribute your success mainly to the personal teaching of Dr. Kennedy?—Yes.

1177. (*Mr. Thompson.*) Dr. Kennedy you conceive to be a consummate teacher?—Yes, I think so.

1178. (*Mr. Vaughan.*) Are the best scholars from Shrewsbury those placed in the school immediately below Dr. Kennedy's form, or those who get into his form from the lower part of the school?—I cannot say. I did not know the history of the boys, generally speaking, until they were high in the school.

1179. Do you receive these exhibitions practically at the recommendation of the Head Master?—I fancy that the Head Master has to certify that a boy is fit to receive it. That is about all. I received it from the Trustees of the school.

1180. You do not undergo a special examination in order to get these exhibitions?—If there were disputed claimants to an exhibition, I should have to undergo an examination.

1181. Were there often disputed claims?—I suppose not, because, generally speaking, there would be exhibitions enough.

1182. For whom?—For such boys as were going to the university.

1183. For all who were going to the university?—For all who were sufficiently high to think they would have any chance in the examination.

1184. For the exhibition?—For the exhibition.

1185. I wish to know whether it was practically the case or not that when Dr. Kennedy thought a boy was sufficiently proficient to have an exhibition for going away to the university he had one given to him?—I fancy his going away to the university was settled first, and it remained to be seen whether he would get an exhibition or not.

1186. Settled by whom?—By the parents or between the parents and Dr. Kennedy, in all cases I have known before they go to the university, and whether they have any chance of getting an exhibition or not.

1187. Have you ever known a contest between one boy and another for the exhibition?—No.

1188. Who then decides that a boy should have an exhibition when he is going up to the university?—They generally arrange it among themselves. They tell Dr. Kennedy who is going up to the university, and Dr. Kennedy states what exhibitions there are, and the boys themselves arrange who shall go in.

1189. As you were four years in the head form of the school and must have had a good deal of insight into how these things are managed, can you tell us what principle determined the arrangement?—The position of the boy in the school.

1190. His position in the school?—Yes.

1191. Was it the case that the highest boy in the school would always have an exhibition if he wanted one?—Unless there were candidates who had preferential claims.

1192. Preferential claims under the terms of foundation, I suppose?—Yes; in the year I went up there were none.

1193. How often would the places in the upper part of the school change?—Every six months.

1194. By examination?—By examination.

1195. So that the boys at the head of the school in the last examination could claim first?—Yes.

1196. (*Mr. Twisleton.*) Were the examinations at the beginning of the half year or at the end?—Some at the end, the remainder at the beginning.

1197. Every boy was examined at the beginning of the half, was he not?—No; the examination began at the end of the half, and were not finished till the beginning of the next half.

1198. That was all through the school?—I believe so.

1199. So that there was a motive for every boy to work during the holidays?—After the holidays they were examined on such subjects as were proposed.

1200. So that there was a motive to the boys to exert themselves?—Yes.

1201. Then the places in the school depended on the working in the holidays?—Possibly to some extent.

1202. (*Sir S. Northcote.*) When you spoke just now of "preferential claims" what did you mean by "preferential claims;" you said the highest boy could get it unless there was a preferential claim?—The son of a burgess of Shrewsbury, would have the first claim; then the son of a person born in Shropshire, and then the whole school.

1203. You say the boys settle it among themselves. Do they consider these circumstances?—If it were known that the son of a burgess was claiming the exhibition, nobody would expect to have any chance.

1204. They would have known it amongst themselves, and have not put forward any other claim?—They would apply to the Head Master to know what exhibitions would be vacant.

1205. What was the mode of settling among themselves; was it a question whether A. or B. should have the exhibition, and how would it be settled that A. should have it and not B.?—If A. were two places above B., both A. and B. would see that in the event of an examination A. would get it, and therefore B. would not put in a claim.

1206. B. would not try for it?—Just so; and then A. would send in his claim, and there being no competition, he would get the exhibition.

1207. Supposing B. had been next to A., would there have been the same feeling manifested?—I should think in the case of two very nearly equal candidates there would probably be an examination, but I do not know whether any instance of that kind has ever occurred.

1208. Has there ever been any kind of pressure put on, say in the case of the boy B., to prevent his offering himself, or has it been always that he knew that it was actuated by his own sense of what was likely to be the result?—I do not know that there was any pressure put upon the boys.

1209. (*Mr. Vaughan.*) Was there ever any adviser; was the Head Master consulted. Suppose that a boy thought that although he was not first in the last examination, he was on the whole as good as the one before him, and therefore considered himself entitled to come forward; did that ever occur?—I never knew such a thing to occur, but from what took place my last half year, I should think the Head Master would recommend an examination in such a case as that.

1210. (*Lord Lyttelton.*) What took place?—One boy was going to Cambridge, and another was going to Oxford. The two boys were nearly equal. The exhibition at Cambridge was 37*l.* a year, the exhibition at Oxford 50*l.* a year. The boys arranged that.

1211. How did they arrange it?—They arranged that one should take the 37*l.* and the other the 50*l.* exhibition, and that the latter should pay half the difference.

1212. Upon what principle did they do that?—I suppose they thought to save trouble.

1213. (*Mr. Twisleton.*) I suppose, generally speaking, the boys (without reference to this particular case) would know very well their relative places, owing to this half-yearly examination?—Yes.

1214. I suppose we may calculate, from what you say, that the boys had every confidence in the mode in which they had been examined, and placed in consequence of the examination?—They must have had, for they never questioned that one boy that was higher than another deserved to be so placed.

1215. If the boys had any difficulty, would they go to the Head Master?—The Head Master would be informed of it; he would tell the Trustees, and the Trustees would appoint examiners.

1216. (*Sir S. Northcote.*) There never was a case in which a boy who stood second in the examination was acknowledged when it came to an examination to be superior to the one above him?—No.

1217. The boy who was first took the place without being challenged, and you never knew the place of that boy challenged by the second?—No, never.

1218. How many boys were there usually in the form taught by Dr. Kennedy during the time you were there?—20, or probably rather more. The præpostors would be 12, and then there would be about 10 in the lower sixth.

1219. Did the number vary much at different times?—Not very much.

1220. (*Lord Lyttelton.*) Did he teach these only?—He taught these only, except, perhaps, once a week.

1221. Were you four years in that class?—Yes.

1222. (*Lord Clarendon.*) What do you think was the principal stimulant to industry at Shrewsbury; was it the desire to have a high place in the school, a desire to obtain prizes, or a fear of shame or punishment?—Principally a desire for high places in the school. There was a general feeling that one ought to work in the upper part of the school. There was a sort of tradition in favour of working in that portion of the school.

1223. That was the spirit that animated the boys?—Yes.

1224. (*Mr. Vaughan.*) Did that list that we saw in the school in gilt letters have any effect on the boys in keeping alive their ambition?—I think so, only it was not put up in the schoolroom in which they were.

1225. The boys were in the habit of seeing it sometimes?—They knew of its existence, and used to look at it sometimes.

1226. (*Lord Lyttelton.*) Did you ever hear any complaint in reference to the cricket-ground or to the want of a play-ground?—I never remember any.

1227. (*Mr. Thompson.*) Did you experience any difficulty from the hours?—None whatever.

1228. You did not think early school inconvenient?—Myself and my friends rather used to like it.

1229. (*Lord Clarendon.*) How far did you live from the school?—About half a mile.

1230. (*Mr. Thompson.*) There were boys I suppose living two miles from it?—I never remember any.

1231. Did the suburbs extend that distance?—The suburbs of Shrewsbury did not extend much more than a mile and a half.

1232. Even a mile and a half would be a great distance to go in winter to a seven o'clock school, would it not?—I suppose it would, but there is not much difference between a mile and a mile and a half when you have got up.

1233. (*Lord Clarendon.*) Did you learn any modern languages at Shrewsbury?—In the fifth form we did, but I am not quite certain whether we learnt them in the lower sixth form or not; certainly not in the upper sixth form.

1234. What modern languages did you learn?—French only.

1235. Not German?—No.

1236. Was it obligatory or voluntary?—Obligatory.

1237. Were your places in the school influenced by it?—It was taken into consideration along with the other work.

1238. Did you learn much French there?—Not much; we had one hour a week.

1239. Did you know French before you went there?—A little.

1240. Could you read with ease and pleasure an ordinary book in French?—Yes.

1241. Without much use of a dictionary?—Certainly.

1242. What sort of a book now could you read; Madame de Staël's writings?—I never tried them; in fact I have not tried anything except novels.

1243. (*Sir S. Northcote.*) Can you read a modern French novel pretty easily?—Yes, tolerably easily.

1244. (*Mr. Vaughan.*) You were four years with Dr. Kennedy in the form, during which term you did not do any French at all?—I was three years in the upper part of the form.

1245. So that you had only one year of French?—I mostly did French myself.

1246. Was the foundation in the language given at school?—I fancy I learnt French more at home than at school; I cannot say what I learnt at school.

1247. Did your companions learn German?—Dr. Kennedy, just before I got into the upper sixth form, gave them a course of lessons in German. He asked the sixth form if they would like to learn it, and there was a course of lessons given, but the lessons were not continued.

SHREWSBURY

C. E. Graves, Esq.

19 Dec. 1862.

1248. (*Mr. Thompson.*) It was dropped?—Yes; it was continued I think until they got on far enough to learn by themselves.

1249. (*Lord Clarendon.*) Did you learn any modern history or geography?—Yes; we learnt geography, and Dr. Kennedy gave a lecture occasionally on modern history when I was there.

1250. (*Mr. Vaughan.*) Do you mean an oral lecture?—Yes, and we took notes.

1251. Did he examine them afterwards?—I think not.

1252. (*Lord Lyttelton.*) It did not affect your position in the school?—No; we learnt geography out of a regular geography lesson book during one week in the year, and were examined in it.

1253. (*Mr. Thompson.*) The late Head Master Dr. Butler wrote a book upon geography, I think?—Yes, that was the book we learnt it from.

1254. (*Lord Clarendon.*) I suppose there was not much private reading in general literature?—I think there was a great deal in the sixth form. We used to take in the papers. There was a great deal of private reading.

1255. (*Lord Lyttelton.*) Where did they have the papers; in their own houses?—In the sixth form room.

1256. What sort of books in general literature did they read?—Novels principally.

1257. Any history?—I do not know.

1258. (*Mr. Thompson.*) The Reviews, I presume?—I believe so.

1259. (*Sir S. Northcote.*) Did you ever hear of a boy reading Gibbon there?—I do not remember that I ever heard of a boy reading Gibbon.

1260. Or any book of that class?—I am not aware.

1261. (*Lord Lyttelton.*) Hallam?—I think I have heard of a boy reading Hallam; it depended very much upon the individual boy's taste.

1262. (*Mr. Thompson.*) You had a complete course of modern history which you were supposed to read?—Yes.

1263. (*Mr. Twisleton.*) How many hours a day for private reading would you be likely to have after doing the work in school?—I should think probably two or three.

1264. (*Mr. Vaughan.*) How many hours did boys spend in the play-ground at cricket in the week do you think?—In the summer somewhere about four hours a day.

1265. Did you spend four hours a day?—I used to spend rather more. In leisure I was generally fishing.

1266. That would not be time devoted to play in the play-ground?—No; rather by the side of the river.

1267. (*Lord Lyttelton.*) Did they play at football much?—Yes, a good deal.

1268. You never heard that the ground was not large enough?—No.

1269. (*Sir S. Northcote.*) Did they play much at other games?—Yes, pretty well.

1270. (*Lord Clarendon.*) Was there much flogging at Shrewsbury?—Not much.

1271. Was it administered in your time as much as in other times do you think?—About the same in my time I think.

1272. How much flogging should you say there was in a school term?—Not much generally. There might be two or three cases.

1273. How many boys were there in the school altogether?—One hundred in my time.

1274. And only about two or three floggings in a school term?—I should think so.

1275. (*A Commissioner.*) And these probably were merited?—Yes. It was looked upon as a very great thing; quite an exceptional thing.

1276. (*Mr. Thompson.*) And it was though disgraceful, I suppose?—I do not know that.

1277. (*Sir S. Northcote.*) Was flogging ever given for idleness or only for moral offences?—It was for long-continued idleness.

1278. (*Lord Lyttelton.*) Supposed to be wilful?—Yes.

1279. Involving some moral offence?—It was only given I think in cases of that description.

1280. (*Mr. Twisleton.*) Will you be so good as to explain the examination in the sixth form at the end of the half year and the beginning of the next; will you give us an idea from your last examination: how long would the examination at the end of the half continue; how many days?—I should fancy about four days.

1281. What would you be examined in during these four days?—Such subjects as you could not prepare, such as philology and subjects of that description.

1282. Could you mention what they would be so far as you can remember, in any one half year. Can you mention in order what the paper would have been at the end of the half year?—Well, there would be composition of all sorts principally.

1283. Original compositions?—Translations.

1284. Translations from English into Latin?—Translations into Latin and Greek.

1285. Into Latin verses and Greek verses?—Yes, into Latin verses and Greek verses, and Latin and Greek prose.

1286. That would take four days?—No, that would take about a day and a half.

1287. Then with respect to the remainder of the time. I want to know what the examination would be in as to that?—I do not remember now.

1288. Had you any examination then in general historical questions?—No; that happened at the beginning of the next half. Then we should have two or more papers of translations of passages not seen before.

1289. From Greek and Latin into English?—Yes.

1290. And that would exhaust the four days?—There would be an examination either in divinity, history, or geography.

1291. On subjects which were not prepared?—No; they would be on subjects that we had prepared.

1292. (*Sir S. Northcote.*) Was there an examination in mathematics?—Yes, in mathematics.

1293. (*Mr. Vaughan.*) Was there an examination in passages from authors which you had not read?—They were separate papers. It might happen that you had passages from authors that you had not read.

1294. If you had not been reading Plato, would that be given you, or might you have had a passage from Lucian which you had not read?—Yes, we were liable to that; and then there would be another paper on subjects which we were doing during the half year. That would be kept separate.

1295. (*Mr. Twisleton.*) At the beginning of the half, what would you be examined in?—In history and divinity, and probably there would be an examination on subjects which we had had in the half year before, together with some mathematical papers. I do not remember exactly where the mathematics came.

1296. How much time in the holidays would you give to the preparation for that examination?—I do not know. I never got it up at all.

1297. Was it a usual thing for the boys to get it up or not?—It was usual to get it up a little. I never heard that it was got up much.

1298. (*Mr. Vaughan.*) Did Dr. Kennedy ever complain that the boys did not come up to the mark?—No; I got it up very well just before, generally. I was generally first in it, and I always got it up the night before.

1299. You got it up in history and divinity the night before?—Yes; we had read it in the half year.

1300. Then you refreshed your mind the night before?—Yes.

1301. Then it had little or no effect from the position in which it was placed, coming at the end of the holidays?—It was intended to have.

1302. But it had none really?—In some cases it had; not always. It did not affect me at all.

1303. (*Mr. Thompson.*) In examinations in history, is it not difficult to prevent boys from resorting to what is called "cramming?"—It is impossible.

1304. Does not that take off from the value of history, as an element in examinations?—I do not think history examinations of that sort are worth very much.

1305. (*Mr. Twisleton.*) Do you not remember the history afterwards which you learn in that way?—I do not think so.

1306. (*Mr. Vaughan.*) Do you not think that the same boy with the same ability would do very differently in the examination and remember it better if he had been reading it moderately, and thinking of it, than if he had merely got it up the night before?—I do not know whether it would do so well for boys. Probably there would be a good answer sent in by one, and none at all by others.

1307. (*Mr. Thompson.*) If there were a *vivâ-voce* examination instead, it would be more easy to distinguish boys who had been *bonâ-fide* students from those who had crammed only the night before?—I should think it would be; but it is principally dates, and facts, and things of that kind that we have to do.

1308. (*Lord Clarendon.*) You have left Shrewsbury for three years and no doubt you have reflected on the time you passed there. Are you satisfied with it. Do you look back to it with pleasure, and consider that the time you passed there was, educationally speaking, well spent?—Very well.

1309. It does not occur to you that it might have been turned to better account in any way?—I think it might have been so far as I am concerned, but not so far as the school is concerned.

1310. Nothing occurs to you with respect to the school system, that you would like to see changed?—No.

1311. You do not think that there is too much of original composition?—There was too much original composition in one or two half years, and I remember grumbling at it very much.

1312. Do you think there was enough translation into Greek and Latin?—There was very little into Greek prose.

1313. Was there much of English into Latin?—Yes, a good deal.

1314. Sufficient, you think?—In one or two half years, I did not think there was sufficient into Latin verse. We had only original Latin verses, which I do not think any advantage whatever.

1315. Do you think that if there were more translations, you would have had greater facility, and have felt yourself better grounded, and more master of the idioms of the language?—I think there was quite sufficient for any purpose of that kind.

1316. (*Lord Lyttelton.*) Do you think you were practised enough in writing English?—We had not much practice in writing English.

1317. Had you not much translation from Greek into English?—In examinations do you mean?

1318. (*Mr. Vaughan.*) In the half year?—There was a good deal of it there, but I do not know whether much attention was paid to the style.

1319. Do you not think that the Head Master paid attention to the style in which the translations were made?—He paid great attention to the style in which he translated it afterwards.

1320. (*Sir S. Northcote.*) What do you mean by saying there was no use in original compositions?—In my own case I frequently brought in a certain number of the same verses over again.

1321. (*Mr. Vaughan.*) But supposing boys took great pains, might it not be beneficial?—There was not very much time for it.

1322. What was the time you could give to a copy of Latin verse?—I might of course give as much time as I liked, but I should have had to neglect other things.

1323. Without neglecting other things, how much time could you give?—About two hours, but it was frequently done in three quarters of an hour.

1324. (*Sir S. Northcote.*) It was of no use generally speaking with reference to the particular prizes you ought to contend for at the university?—I do not think it was generally speaking.

1325. (*Lord Lyttelton.*) How much time did you give to mathematics in a week at the top of the school?—In school about three hours a week.

1326. Did you find that that was quite enough; when you went to Cambridge had you any arrears to make up?—I knew quite as much of mathematics as I wanted.

1327. (*Mr. Thompson.*) You did not go in for mathematical honours?—No.

1328. Did you resolve that you would not when you came up?—No; I intended to read for mathematics some time or other.

1329. How much mathematics had you read when you came to the university?—Not the whole of the first year's subjects.

1330. Part of Euclid and algebra?—Yes, and some conic sections.

1331. A little of trigonometry?—I cannot remember.

SHREWSBURY.

ANALYSIS OF THE EVIDENCE.

[*** The Names of the Witnesses are in Alphabetical Order. The Figures refer to the Numbers of the Questions in the Minutes of Evidence.]

SHREWSBURY

BATHER, JOHN, Esq. (*See* Evidence of the Governors, Trustees, and Treasurer of Shrewsbury School, page 339.)

BENTLEY, Mr. T. A., page 349.

Has been Assistant Master at Shrewsbury upwards of 20 years; teaches French and German; 937–942. Was at a French School in Paris two years, when a boy, and was three years in Germany; 943–945. So far as modern languages go, has very much under his charge the non-collegiate class; in addition to what they would do in their several forms, they come to him for an additional lesson in French; 946–948. One of the objects of establishing the non-collegiate class (in which they are allowed to drop both Greek and Latin composition) is that they may devote themselves more to modern languages instead of classics; the non-collegiates of the Fifth Form join the French lesson of the Fourth Form; the non-collegiates do not make more progress in modern languages than the other boys; they are originally the most illiterate of all; a non-collegiate boy has four hours a week in modern languages; a collegiate boy one hour or two hours; at the formation of the non-collegiate class, and subsequently, it has been joined by a class of boys who imagine that by doing so they would escape a portion of their regular form work, and this being the case with the majority, the progress of the class has not been in proportion to the time devoted to it, nor can he for one expect that it should be different; the removal to the non-collegiate class is generally made at the requirement of the parents; in general, a boy, who beginning in the Fourth Form has reached the Lower Sixth, will, if he have paid average attention, have acquired a fair knowledge of French and be able to read off an historical work, such as St. Simon, and manage Molière pretty well; 949–964. The boys have no practice in speaking; most public schools have abandoned conversation classes; 965. With exceptions, boys who enter at 10 or 11 have to begin French; there is great difficulty in getting them to pronounce; 966–971. French does not enter into the general examination; but prizes are given for the best scholars in each Form, and in order to find them out he has an examination in each half year; 972–976. The boys are exercised in French composition, and in *viva voce* translations from French into English; 977-979. Some of the boys in the Sixth Form are learning German; they are intelligent boys, and in six months they acquire more knowledge than others in three years; in the six months the head boy was able to appreciate Schiller's *Wallenstein* with ease; thinks therefore it is not desirable for boys to take up German until they are tolerably high in the School; 980. The only improvement he can suggest with regard to modern languages would be to give more time; French is part of the school curriculum, and therefore compulsory; German is optional, 981–985. Arrangement of Forms; the Classical division kept up in the Fifth and Sixth Forms; 986–992. Gives extra instruction to four or five private pupils, at a charge of 8 guineas a year; 993–995.

BURTON, The Rev. R. L. (*See* Evidence of the Governors, Trustees, and Treasurer of Shrewsbury School, page 339.)

CALVERT, Mr. EDWARD, page 346.

Is an assistant master at Shrewsbury school; in February 1852 he came as a kind of private secretary to Dr. Kennedy; in August of that year he took the Fifth Form regularly; in February 1859 he left, and took a school in the colonies; and in August 1860 returned to Shrewsbury, and has recently taken the superintendence of the non-collegiate class; 844–847. The non-collegiate class was formed about four years since to meet a kind of demand of the people of the town, which appeared pressing at that time, for a more commercial kind of education, but as that was not at all the object of the school, it was thought that the demand might be met by establishing a class which should prepare the pupil for such employment as did not require a scholar-like classical education; accordingly certain boys whose parents wished them not to go to college,

Calvert, Mr. Edward—*cont.*

were allowed to give up Greek altogether, and all Latin composition, except elementary, and give more time to mathematics, modern languages, and English composition; the number of these boys has varied from 18 to 24; in fact, these boys are excluded from the Sixth Form; 848–852. A curious instance of the operation of this scheme; a solicitor of the town intending his son for his own profession, placed him in this class, where his progress in Latin was so great that by it alone, he placed himself at the head of the Fifth Form; at witness's suggestion, the father then consented to the boy learning Greek, and in seven months, never having seen a Greek book before, he was able with a little preparation to construe a passage from the *Odyssey*; with grammar and dictionary he would probably in less than an hour construe a chance passage of 30 lines; 853–861. Is unable to say whether this non-collegiate class has given satisfaction to the parents; it has not to him; believes it has a tendency to encourage indolence; 862–867 and 872, 873. Probably some extra progress has been made in modern history in the new class; 874, 875. Boys give each other construes, although doing so may affect their own position; they did so when he was a boy; their emulation, so to speak, does not quench their philanthropy; 868–870. Private tuition at Shrewsbury, charged at 16*l.* 16*s.* a year, is different from private tuition in other schools; in those it is the rule, here it is the exception; has five private pupils, but four is his average; there are no other private pupils, unless Mr. Bentley is giving some very elementary lessons in the lower part of the school; 876–887. One of his pupils wished to go for a scholarship at Oxford; he worked very hard and obtained it, and now he is preparing for Oxford; the private tuition is like the instruction of a private tutor at Cambridge, not like that of a private tutor at Eton; 889–890. Witness has just been appointed master to superintend the private tuition of all boys below the Sixth Form, but the new system is not yet in operation; 891–895. The non-collegiate system, though a little complicated, is found to work without difficulty; 896.

EDWARDES, T. H. HOPE, Esq. (*See* Evidence of the Governors, Trustees, and Treasurer of Shrewsbury School, page 339.)

EDWARDS, Councillor. (*See* Evidence of Members of the Corporation of Shrewsbury, page 325.)

FISHER, Rev. G. W., page 348.

Has been Mathematical Master at Shrewsbury School two years; 809–901. Mathematics part of the regular duties of the school, and therefore compulsory; teaches the whole of the School mathematics, from arithmetic to the differential calculus; 909–916. Time devoted to teaching: four hours a week for all except the Lower Sixth, who get three hours; 916–919. The other teaching of the School does not conflict with the mathematical; the great drawback arises from the chief lessons coming in the afternoon, so that the extra half-holidays interfere; 922–923. The same proportion of marks given for mathematics as for classics; 924–927. The papers vary with the amount of reading; if no boy has read the differential calculus the subject would not be included in the papers; about seven boys have read it in his time; boys of average ability seldom get beyond trigonometry; 928–931. Examinations in mathematics take place about the same time as classics; 931–932. It is not generally the case that the best classical scholars are amongst the best mathematicians; but the best mathematicians are generally average classical scholars; studious boys in mathematics will be studious boys in classics; in some cases a studious disposition has had the effect of bringing boys up amongst the highest in both; 933–936.

GRAVES, CHARLES EDWARD, Esq., page 351.

Was five years at Shrewsbury, which he left in October 1858, since which he has been to St. John's College, Cambridge, where he graduated in honors, being second in the first class of the classical tripos; 996–1002. In the School, the town boys and the boarders lived together very much on an equality; out of School they did not see much of each other, especially in the lower part of the School; socially there was no difference whatever; 1003, 1004. Those of the town boys who chose to do so played at cricket with the boarders; but, as a general rule, they went home; was him-

GRAVES, CHARLES EDWARD, Esq.—*cont:*
self a town boy; the town boy was always received, if he made the advance; 1005–1011. The monitorial system prevails at Shrewsbury; the upper Sixth Form are præpostors; their duties were not defined; they were supposed to look after the boys in general, out of doors, and check a boy doing wrong, and they had the power to inflict punishment, but that power was exercised only occasionally; as a matter of tradition the præpostors could set impositions and use the cane, but no instance occurred, while he was at school, of the power being exercised; 1012–1022. There was but little drinking at the School, or public house visiting; generally speaking the latter would be against School discipline, 1023–1027 and 1038–1040. The School-boys all wear a cap, except the Upper Sixth; it is an old custom; the town boys do not wear the cap; the School boys are under discipline in the town, the town boys are not; 1029–1037. The tone of the school was high; there was an honorable and gentlemanly feeling in the School, a feeling of reprobation of lying and vice and anything mean; 1041–1042. A number of boys, neither boarding at the School nor at home, lodged with tradesmen in the town; over these the School has no control or discipline; but he never heard of any mischief resulting; it was merely an arrangement between the parents and those who kept the lodging house; 1043–1056. There was not much fagging at Shrewsbury; only the præpostors in his time, 12 in number, had the power of fagging; they exercised the power in moderation; believes the only fagging consisted in getting the fag master's breakfast; 1057–1064. Knows almost nothing of the School boarding houses; the lower Sixth Form used to complain of their reading rooms being close and hot in the evening; 1065–1678. The boys would sometimes complain of the quality of their meat; 1077–1082. Mode of spending Sunday; used to go to church with his parents in the morning; the rest of the day he was with the rest of the boys, the boarders; there was a lesson at 8 o'clock, chapel in the afternoon, and lessons in Scripture History, Greek Testament, History of the Reformation, &c.; town boys were with their parents in the evening; 1083–1104. Average School work occupied five hours, with three hours preparation in addition; 1105–1110. Never suffered in health from being overworked, nor heard of any one else suffering; 1111, 1112. There were private tutors in the School, rather as a private arrangement than as part of the School system; remembers only two instances in which such aid was resorted to, and that was for extra classical work in preparing for the University; many boys prepare for the Universities without the benefit of private tuition; the most brilliant boys had not private tuition; but if a boy thought he was not sufficiently prepared, he would have a private tutor; 1113–1122. Thinks the Shrewsbury boys go to the Universities with about the same amount of reading as other boys; 1123. Enumerates the classical books which he read at Shrewsbury before going to the University; 1124–1166. (*Mr. Thompson:*—You seem to have read about twice as much as the boys from any other school. (*The Witness:*—Probably a majority of the præpostors have read as much; 1144, 1145. Was five years at Shrewsbury, four under Dr. Kennedy; at the end of his fourth year he obtained an exhibition; does not think he was longer than ordinary under Dr. Kennedy; thinks Dr. Kennedy a consummate teacher, and attributes his success to the latter's personal teaching; 1167–1177 and 1217–1221. Mode of disposing of the exhibitions; position in the School determined by examinations, both of school work and holiday work; the head boy entitled to the exhibitions, unless there intervened the preferential claims of the son of a burgess of Shrewsbury, or the son of a person born in Shropshire; details as to the practice where there are more candidates than exhibitions; 1178–1217. The chief stimulant to industry at Shrewsbury is a desire for a high place at school; perhaps the list in gilt letters has its influence also; 1222–1225. Never heard complaint in reference to the cricket-ground or the want of a play-ground; 1226, 1227. Games; 1262–1269. Found no fault with the early school in winter, 7 o'clock; 1226–1282. Learned French; it was obligatory at school; knew a little French before he went to the school, and learned more at home than at school; 1233–1246. Some of his companions learned German; Dr. Kennedy gave them a course of lessons; these were continued till the boys got on far enough to continue by themselves, and then dropped; 1247, 1248. Geography and modern history, to what extent taught; 1249–1253 and 1262. There was a great deal of private general reading; newspapers, novels, reviews, Hallam; 1254–1261 and 1263. Cricket, football, 1264–1269. Very little flogging at Shrewsbury; out of 100 boys there would be only two or three floggings in a term; 1270–1279. Describes in detail the nature of the examination in each half-year; 1280–1307. Having left Shrewsbury three years, and looking back to the time he passed in the School, considers that the time he spent there, educationally speaking, was very well spent; he cannot suggest an improvement in the School; 1308–1310. School details; 1311–1331.

HAYCOCK, ALDERMAN. (*See* Evidence of Members of the Corporation of Shrewsbury, page 325.)

HUGHES, ALDERMAN. (*See* Evidence of Members of the Corporation of Shrewsbury, page 325.)

KENNEDY, THE REV. BENJAMIN H., D.D., Head Master of Shrewsbury School. (There were also examined at the same time, the REV. JOHN YARDLEY, Vicar of St. Chad's, Shrewsbury; the REV. E. C. L. WIGHTMAN, Vicar of St. Alkmund's; the REV. THOMAS B. LLOYD, Perpetual Curate of St. Mary's; T. W. TROUNCER, ESQ., Mayor of Shrewsbury; and J. J. PEELE, ESQ., Town Clerk and Bailiff of the Free School.) Page 313. SHREWSBURY

A memorial having been presented to the Commissioners, signed by four out of five of the Trustees of Dr. Millington's Charity, also by the Mayor of Shrewsbury and the Town Clerk and Bailiff of the Free School, the memorialists appear, and the witness, as their mouthpiece, explains their wishes: it was the intention of Dr. Millington, who was born in the town, and educated at the Shrewsbury School and Magdalen College, that the School and College should equally share the benefit of the estate; and one half having been alienated entirely from the Schools for the sole benefit of Magdalen College, they contend that the School has an equitable claim to the other moiety, although, by a decree of the Court of Chancery, the College now possesses three-fourths, and the School only one-fourth; 1, 2. Gave notice to Mr. Bright, Tutor of the College, of the intention to present the memorial, and expects opposition; offered, the year before last, to acquiesce in the surrender of the fellowships to Magdalen College, if the College would acquiesce in the surrender of the scholarships to Shrewsbury School, but this offer was officially declined on behalf of the College; 3–8. The Master of Magdalen College is the fifth Trustee of the School; he does not join in the memorial, nor has he been applied to for the purpose; 9–11. Are quite aware that the Commissioners have no power to give effect to the wishes of the memorialists; but think their recommendation may result in an Act of Parliament, as was the case with reference to the two Universities; 12–18. The Millington estate is let on lease at 250*l.* a year, probably at rack-rent; there is also an accumulated fund of 10,300*l.* consols; thus the estate is very nearly divisible into two parts, and the proposal of the memorialists is, let the College take the estate, and give the money for the benefit of Shrewsbury School, in such a way as the Commissioners may think proper to recommend and Parliament to sanction; the College have appropriated to themselves and alienated from the School two fellowships, which they have consolidated, and the memorialists ask that the four scholarships, of about equal value, instead of being appropriated to Magdalen College, should, for the benefit of the School, become exhibitions open to any college in either University; there cannot be a more respectable, well-conducted college than Magdalen, but it is one of the smallest in the University, and every parent who wishes to send his son to a public school, with a view to scholarships or exhibitions, would be more likely to send him to a school whence the further place of education was open to his choice; 19–51, and 538–541.

Further examined alone.

Has been Head Master of Shrewsbury School 26 years; 52, 53. The property of the School consists of the School buildings, Master's houses, tithes, a house at Grinshill, two chief rents, and money in the funds; the latter, 9000*l.*, forms part of the school estate, and 3000*l.* of it is set apart by the Trustees for the purchase of a junior house and studies; 54, 55. Shrewsbury School founded by letters patent of Edward VI., 1551, addressed to the bailiff and burgesses of Shrewsbury and giving them certain tithes to found a School, entitled, "*Libera Schola Grammaticalis Regis Edwardi Sixti;*" there has since, been a change in the constitution of the Trustees, the bailiffs and burgesses having ceased to have any share in the goverment of the School; 56–61. Has argued that "*Libera Schola*" means, exempt by royal grant from other superiority; an attempt to controvert the argument was made by Mr. Grady, a barrister; the argument was raised in an antiquarian, not in any practical view, except in so far that if recognised as valid it took away the power of raising a grievance which some people are fond of exercising; 62–65. Mentions some arrangements between the school and corporation resulting in the 33 Geo. III., a main feature of which is "the gift of the right of gratuitous instruc-" tion to all sons of burgesses," but this provision has been greatly modified by the Municipal Reform Act of 1835, which is diminishing the number of old burgesses; at present the number of burgesses' sons is about 25 out of 131; the number was 65 when he became Head Master; it has been as low as 13 or 14; attributes the diminution to the falling off in the number of burgesses, 66–77. Examination as to the new "scheme:" the Act of Parliament declared that any surplus revenue should be expended in the creation of new exhibitions, and an exhibition of 100*l.*, more valuable than the rest, in honour of Dr. Butler, was so created; the Trustees petitioned the Court of Chancery for a scheme for the distribution of the surplus to other objects, one being the improvement of the living; the late Sir Lancelot Shadwell, the Vice-Chancellor at the time, refused his sanction and dismissed the petition, but Lord Cottenham, whose bias was known to be in favour of extending the power of the Court of Chancery as much as possible, reversed the decision of the Vice-Chancellor, and sent the scheme to the Master for revision, deciding in fact that the Court of Chancery had power to frame a scheme over-riding the Act of Parliament; one result was the reduction of the Butler exhibition to 50*l.*; 78–91. Lord Powis and the Careswell Trustees opened their

SHREWSBURY. KENNEDY, The Rev. BENJAMIN H., D.D.—*cont.*

exhibitions, with good results; 92–98. Generally, the "scheme" is acted upon; it is not with regard to the particular examination it requires; exhibitions, about two a year, are given according to the result of the school examination, conducted by himself, not according to the special examination provided by the "scheme;" should a boy challenge his decision, or should there be more candidates than exhibitions, the special examination must then take place; 99–117. Once, in 1840, a contest actually occurred, and a special examination was made by a Cambridge man; 118, 119. There is scarcely anything like selection; the boys know each other's strength from the school examination; there was no boy in the school who would have thought of offering himself in competition with the boy who got the exhibition last October twelvemonth; a few years ago, there were four candidates for three exhibitions, and he intended to ask the Trustees to appoint an examiner, but the boys talked the matter over among themselves, and one of them withdrew his name; in fact the school examination operates as an examination for the exhibitions; it brings out the boys fittest for the exhibitions; 120–130. A burgess's son, if qualified, has a preferential claim over a Shrewsbury boy, and the latter over a Shropshire boy; years ago, one of the present Trustees, offered himself for an exhibition; he was a burgess's son, but not being born within the limits of the borough could only claim as a Shropshire boy; he was opposed by a burgess's son, born within the borough, and who would have had the preferential claim, but witness refused to certify competency, and the other boy obtained the exhibition and distinguished himself at the University; 131–136. The scheme provides that all the exhibitions, except the six at the head of the list, shall be open to all Colleges and Halls in Oxford and Cambridge, that is when any shall be created; further details on this subject; 137–150. Scheme provision as to the playground, library, and prizes; 151, 152. A class feeling exists at Shrewsbury as it must always exist where two classes mix in a School, but it does not exist here more than in other places; his own wish has always been to promote the best feeling between boarders and day-scholars; among the day-scholars are the sons of tradesmen, not small tradesmen, this class is more apt to join the non-collegiate class; the day boys have an equal right to the playgrounds with the boarders, but they do not use them equally; they come at lesson hours and go home after lessons; the two classes are about equal in numbers at present; 288–299 and 666–673. Some gentlemen of Shrewsbury send their sons to the School as boarders, for the purpose of giving them the full advantage of English public school life; others deem it wise to send their children further from home; is of the latter opinion; 300–301. A free burgess's boy pays nothing; other boys 15 guineas each; but the fee is often remitted in favour of the sons of poor clergymen; 153–156 and 283, 284. The income of the Under Master is about 500*l.* or 600*l.* a year; the Senior Assistant Master 225*l.*, the Second Assistant Master, 200*l.*; the Mathematical Master, 340*l.*; the French Master 340*l.*; and the writing Master, 125*l.*; private lessons, boarders, and supply of stationery give some addition to these incomes; 157-171, and 198-200. Charge for private lessons, 286, 287. Is able to work the School satisfactorily with the means which these salaries place at his disposal, but would be glad to increase them; has not been able to obtain men of such first-rate University distinction as Harrow and Rugby, where the Masters have houses and the profits of houses, but nevertheless has been at no loss for good Masters; more details as to the Masters; 172-185. The French Master's position is the same as that of the other Masters, except as to dress; not being a University man he does not wear the University dress; the Bishop of Lichfield offered to ordain him, but he declined; he is as much respected as the classical masters; he is an Englishman, but was educated at Paris and Baden-Baden; French the only modern language taught in school, but Mr. Bentley gives private lessons in German; 186-194. Houses and lodgings for the Masters, and dinners, 195-197. Duty of tutor to give supplementary teaching out of school; analogous to the private tutorial system of other schools; has not found at Shrewsbury that a boy able and desirous to do himself justice in the school needs assistance out of it, but there will be boys to whom such assistance may be desirable; had six years' experience at Harrow where the tutorial system prevails, but was not disposed to introduce it at Shrewsbury; 201-212, 238, 239, and 542-546. Describes the non-collegiate class; established five years ago to meet the wants of those who do not intend to send their sons to a University; the boys are incorporated with the School generally, take their status according to Latin, and do all the Latin lessons in their class; but when the Greek comes, instead of Greek and original Latin composition, the non-collegiate boys would be put to modern languages, history, English composition, and additional mathematics, and what, if there were more of it, he might call "physical science"; there are 18 or 20 such non-collegiate boys; it does not follow that all the rest are going to College, but in their case the parents are willing that the usual course should be followed; thinks the system works tolerably well; the non-collegiate boys have a fair education, and will be tolerably well prepared for the profession to which they devote themselves; 213-226, 232-237, and 549-550. Gives an exceptional instance (see 853-861, in evidence of Mr. Calvert,) of the re-transfer of a boy from this class to the collegiate school; 227-230. The non-

KENNEDY, The Rev. BENJAMIN H., D.D.—*cont.*

collegiate boys are not looked upon by their school-fellows differently from the rest; one or two of them are remarkably intelligent boys; but some of them are the idle boys of the School; 231. There was no special master for mathematics till three years after witness came to Shrewsbury; mathematics were taught as an accomplishment, but they were not regarded as essential, nor part of the curriculum; now they are; 240-244, Introduced French voluntarily before the "scheme" required it; it is compulsory on all but the præpostors who require to concentrate their forces on their class-work, but even these would be recommended to keep up their French; 244-255. Twelve is the nominal number of præpostors; a præpostor is never deprived of rank, even when beaten in examination; 20 marks difference required to change the place of a præpostor, 50 a head boy; a boy might be a præpostor three or four years; 249-251. A little German taught in the School; 253, 254. From 20 to 25 boys a proper number to one master, 256–258. At present the Trustees of the School are self-elected, and St. John's College has the appointment of Head Master; thinks it would be advantageous if the Trustees, the Governing Body at present consisting of 12 or 13 members, were partly self-elected and partly nominated; he would like to see power given to St. John's to nominate three Trustees, and the Corporation of Shrewsbury three others; 259–262, and 265–269. The direction of the studies of the school is vested in the Head Master absolutely by the Act; but the "scheme" has modified his power; the Under Masters sup with him on Saturdays, when they talk over the affairs of the School; is cognizant of all the books and work of the school; 263, 264, 270–272, 326–328, and 449–454. All the masters, except the Modern Language Master, are University men, and generally they have been clergymen; hardly ever gets a clergyman to begin with, but the Bishop of Lichfield is good enough to take the mastership as a title for orders, and the masters are glad to be ordained; desirable to have more than one clergyman in the School, as the Sunday service and morning prayers have to be read, and if one clergyman is not well there is another to take his place; 273–276. The Head or Second Master can only be removed on good cause and with the approbation of the Bishop of Lichfield; 277–280. Provision and practice as to pensions; 281, 282. Boys are removed from one boarding house to another as they advance in years; they are kept in order in the junior houses by a sort of monitorial authority; 302–304. Diet uniform: bread and butter and tea (with sugar and milk) for breakfast and tea, and two meats, vegetables, bread, and table beer (with pudding and tart four days a week) for dinner; does not object to meat twice a day, but does not see how to give it for the same terms; meat twice a day has never been the custom at Shrewsbury, and considering how many generations of boys have gone on without it, cannot say it is absolutely necessary; in his own time the boys had no tea, but only bread and cheese and milk for the evening meal; the health of the boys is remarkably good; there has not been a boy in the sick room this half year; 305–311. About three years after he became Head Master he introduced the cap as a police regulation, and considers it to have had a most important moral tendency; persons in any part of the town have no longer an excuse for supplying a boy with or abetting him in anything contrary to morality and discipline, and he believes that boys have more self-respect when certain they are known as members of the School; is certain that good has resulted; 312–316. A few boys live in the town with respectable persons to whom their parents have chosen to confide them, and attend the School as day scholars; the masters assume no responsibility for such boys out of school hours; they are desired not to wear the school cap except in the way to and from school; they are not allowed to wear the cap except when under discipline; if told that such a boy was seen smoking or going into a public-house, he would write a letter to the parent desiring the boy to be removed, unless it was quite certain that he had committed such offence for the last time; 318–324. In such a case, a præpostor (who may be a town boy) might interfere; 322–325. The boys who come to Shrewsbury for a finish for the sake of a public school education are generally sons of Welch country squires or Lancashire manufacturers; they come at rather an advanced age, and are generally satisfied if they get into the Fifth Form; 329–331. Last year the number of boys reached 141; it has fallen off a little this year; has no doubt that the falling off in numbers has been caused by the foundation of so many proprietary schools; 332, 333. The condition of the old buildings and the want of proper accommodation may have had something to do with it; Mr. Bather, one of the Trustees, himself an old Shrewsbury man, is of that opinion, and perhaps he is right; old Shrewsbury men in general do not send their sons to the School; a recollection of the discomforts they themselves endured at Shrewsbury may perhaps be a cause; about the time he took Shrewsbury, Rugby (under Arnold) and Harrow made a great start, but Shrewsbury had been most interfered with by Marlborough, Rossall, and Cheltenham, more especially the latter; 334–339.

Further examined.

Explains "merit money:" all the marks given for work, good exercises, punctuality at chapel, &c., are considered monthly, and, if deserved, merit money is awarded, according

KENNEDY, The Rev. BENJAMIN H., D.D.—*cont.*

to the boy's place in the School; the maximum for the head boy is a half-guinea, the præpostors 6*s.*, the Lower Sixth and Upper Fifth 5*s.*, the Lower Fifth 4*s.*; then it goes down to 3*s.* 6*d.*, and for the little boys to a half-crown; the maximum given only for all the highest marks; the minimum goes as low as 1*s.*, or in the case of a very little boy, 6*d.*; the system introduced by Dr. Butler; 433–436. No rule as to age on admission; it is a matter of discretion; a new boy is placed in any remove for which he is deemed fit; sometimes, for the good of the School and his own good, a boy's age and size give him a remove to a higher place; if fit for it, a new boy may be placed in the Lower Sixth, but it does not occur oftener than once a year, and he is never made a præpostor; boys fit for the Lower Sixth come generally from small grammar schools; this practice is peculiar to Shrewsbury, and the unreserved promotion of merit is perhaps one cause of Shrewsbury success; 437–446. Some of these boys have turned out first-rate scholars; names one who was placed in the Sixth Form at first; he was 16, and soon rose to be a præpostor, after two and a half years at school, he went to Cambridge, where he was 15th Wrangler, bracketed senior classic with a schoolfellow, and senior medallist; 447, 448. The Head Master has power to modify the course of study and change the books, but heseldom exercises it, the expense being an important matter, especially with the day scholars; the Under Masters have not the power; 449–451. Prepared a Latin and a Greek grammar; Mr. Holmes's success with these books, his career very brilliant at Cambridge, where in his first year he gained the University scholarship, three Porson prizes, and numerous other distinctions; 452. Promotions mainly by proficiency; 455–460. Attention paid to English composition, by demanding elegance in the translation from Latin and Greek; English etymologies; English verse composition neglected for want of time, but Milton sometimes resorted to, and boys occasionally write English poetry out of school hours; 461–474. Private readng of English literature; 470. *Vivâ voce* translation from Greek into English, and from English into Latin practised; translating a page of Gibbon into Latin would be one of the hardest things you could give a Sixth Form to do; with preparation, he would do it; 475–483. Reasons for introducing it; 484–486. Repetition of Latin prose essential to the formation of a good Latin style; Latin repetition practised; Greek repetition not in use, for want of time; mode of teaching Greek; 487–498. French not considered in the general examinations, partly because there is not time to attain proficiency, partly because at the Universities there is a desire for boys who are strong in some one subject, such as classics or mathematics rather than those who have obtained moderate proficiency in several; but prizes are given for French on a level with other prizes in the school, *e.g.*, the works of Molière well bound in two octavo volumes; 499–501 and 507–509. Welch boys least successful in learning French; 506. Mode of teaching history; 502–506. Details as to examinations and prizes; 510–518 and 533–535. The Careswell exhibition; examiner appointed by the Dean of Christ Church; the Trustees adopted the recommendation of the masters and threw their exhibition open; they had some surplus revenue, and they established a prize open to the six schools without limitation of county; would prefer that no preference should be given to Shropshire in the exhibitions; such preferences are prejudicial to the School; there are 14 exhibitions appropriated to this and five other Shropshire schools; one has four, some have three, some two; if they can find a competent candidate for an exhibition they have a right to it; Shiffnall and Donnington never send candidates; there are few from Bridgnorth; Newport and Wem generally have candidates; if any one of the schools has no candidate the exhibitions are thrown open to the other five schools, and Shrewsbury generally obtains them, but not without exception; 519–532 and 536, 537. More on this subject; 538–541. The ordinary school work in classics and mathematics is sufficient to ensure success in competitive examinations to an able and attentive boy; India, Woolwich, and Civil Service examinations; 557–559. Libraries; 560–566. Choral service established and given up; 567–569. Music; 576–579. School of Design and Drawing; attended chiefly by the non-collegiate boys; 570–575. Boys who have no penal marks during the half allowed to go home on the Saturday previous to the Wednesday which begins the holidays; the system peculiar to Shrewsbury; nothing the boys value so much as going home a few days earlier; the result is good; as many as 20 have had the privilege; this half the number is 14 or 15; 580–582. Half holidays earned by good conduct also; 585, 586. Punishment of writing out; 583–584. Other punishments; flogging reserved for offences of a moral character or serious breaches of discipline; no literary faults so punished unless they assume an aspect of moral guilt; no merely stupid boy is in danger of flogging; the flogging is administered in the school-library in the presence of the monitor of the form, and where a signal example is requisite in the presence of the whole school; is always loth to flog a boy of advanced age, but has sometimes flogged a boy in compassion to him or his father to save his expulsion; on an average there would be half a dozen cases of flogging in the half year; has passed through a half year without a single flogging; sometimes a Fifth Form boy is flogged, but practically flogging is confined to the lower boys; 587–597. Falsehood and smoking, both liable to flogging; evidence as to smoking; an illustrative anecdote; 600–604.

KENNEDY, The Rev. BENJAMIN H., D.D.—*cont.*

Bullying considered a grave offence; there is very little of it; the feeling of the upper boys against it; 598, 599. The præpostors obtain their rank by literary merit only; they are the first twelve in the Sixth Form; if other boys get above them in the remove on examination, the præpostor would still keep his office, unless degradation became necessary from other causes; 605–607. They are allowed to wear a hat as a proof of confidence; 608–611. Going out of bounds; 600 and 610, 611. A compromise between the præpostors and himself relative to the game of "hounds," and the "leaving" breakfast at an inn; the "hounds" was confined to the space within the river, and the leaving breakfast and "hounds" dinner removed from the inn to the pastry-cook's, wine, spirits, and strong ale being prohibited, and bitter beer alone permitted; the præpostors held out for some days, and then gave in their concession; 612–621. The monitorial power at Shrewsbury vests in the præpostors; there are 12 of them at present; details as to their power of inflicting punishment; 622–632. Compulsory foot ball a regulation of the boys themselves; 633–635. Fagging not extensive or menial; two of the lesser boys keep goal at foot ball, and the rest join in the games; 636–645. The holiday system remains as he found it; holiday tasks; 646–661. The holidays will probably be abridged; 652. Being told that the town council had complained that morning of the inconveniently early commencement of the school, at half past seven, for Shrewsbury boys living at some distance from the School, he states the difficulties attendant on the case, and what he has done by way of remedy; 654-664. Time for play; size of the playground, racket court, and cricket ground; the question as to the social relations of the boarders and day boys revived; 665–673. Swimming, drilling, rifle corps declining, games expensive, taxation for them is in hands of head boy; 674–687. Partaking of the Holy Communion voluntary; it is well attended; never talks on the subject individually unless the boy seeks it; 688–690. Value of a university education in public opinion diminishing; people ask what bearing classics have on money making; considers classics and mathematics the elements of liberal education; 691–693. A further development in the direction of English, French, and German, he would call a liberal "non-collegiate education;" 694. Considers Latin the proper basis of a public school liberal education, and that its development is in the direction of Greek on the one hand and modern languages on the other, as far as languages is concerned; considers mathematical training a proper complement to both; 695–698. Does not consider physical science as furnishing a basis of education at all; considers it rather as an assemblage of facts, than as supplying principles; it would be better as an adjunct to a course of education than as a part of elementary teaching; it might act as a kind of discipline of the senses not of the mind; 699–706. Suggests that a number of needy boys might be added to the list of the burgesses' sons, as that list naturally diminishes by the operation of the Municipal Reform Act, so that a number, to be fixed, might continue to receive a gratuitous education, fitting them, if of ability and good conduct, for the learned professions; 707–710. Reasons for success of Shrewsbury men at Cambridge, and not at Oxford; 711–716. Time consumed in school work; 717–722.

Letter from DR. KENNEDY, showing the various improvements and comforts introduced into the Shrewsbury Schoo since 1836, explanatory of his examination in 335–339; p. 350.

LLOYD, the REV. THOMAS B. (*See* Evidence of Dr. Kennedy, and others, page 313.)

LLOYD, W. BUTLER, ESQ. (*See* Evidence of the Governors, Trustees, and Treasurer of Shrewsbury School, page 339.)

LOXDALE, JOHN, ESQ. (*See* Evidence of the Governors, Trustees, and Treasurer of Shrewsbury School, page 339.)

NORTON, COUNCILLOR. (*See* Evidence of the Corporation of Shrewsbury, page 325.)

PARRY, COUNCILLOR. (*See* Evidence of the Corporation of Shrewsbury, page 325.)

PEELE, J. J., ESQ., Town Clerk of Shrewsbury, and Bailiff Treasurer of the Schools. (*See* Evidence of Dr. Kennedy, and others, page 313.)

Further examined with the Corporation of Shrewsbury, page 325.

Further examined with the Governors, Trustees, and Treasurer of Shrewsbury School, page 339.

Further examined alone, page 343.

Is Bailiff and Treasurer of Shrewsbury School; 786. The property of the School consists of the School buildings, Master's houses, tithes, freehold house at Grinshill, two chief rents, and money in the funds; the money arises from savings of surplus income, out of which additional exhibitions have from time to time been founded, and an additional provision made for clerical duties, leaving an existing balance amounting to 9,000*l.*; 787, 788. There has been a surplus of 200*l.* or 300*l.* every year except one, when a new "scheme," propounded by the Trustees to Chancery, was litigated at a cost of 1,000*l.*; 789. The Trustees promoted the scheme, the objects of which were to make alterations in the exhibitions both as to period and amount, to increase the stipends of the clergy,

SHREWSBURY. PEELE, J. J., Esq.—*cont.*

and to provide residences for the incumbents of the School livings; the present Master of the Rolls, who was Solicitor-General at the time, advised the application; the Vice-Chancellor, Sir L. Shadwell, decided that there was no jurisdiction, as the object was to override some provisions of an Act of Parliament; but the Lord Chancellor (Cottenham) reversed that decision, granted the prayer of the petition, and a reference was made to the Master, and a new scheme framed, which was approved by the Court; believes the scheme is in partial opposition to the special Act of Parliament; 790–807. No money has been paid to an examiner under the "scheme," nor to Dr. Kennedy for books, nor has a playground been provided by the Trustees, nor have the exhibitions in the University been opened; 808–816. Commutation of tithes has benefited the School by preventing litigation; 817, 818. No gratuitous education or preference claim to exhibitions, for the sons of burgesses, is provided in the grants of Edward VI. or Elizabeth; their only privilege in the ordinances of Ashton, in the reign of the latter, was admission at half the entrance fee paid by other residents; the preferential rights to the exhibitions are recognized in ancient documents, but there is nothing concerning the free education of the sons of burgesses till the Act of Parliament; when the burgesses gave up the Trusteeship and other matters, they probably stipulated for a free education for their sons, and for a first claim to benefices and Founder's exhibitions; further details on this and other points; 819–831. Opinions as to the best mode of enlarging and improving the School; disapproves of the suggestion that 25,000*l.* should be borrowed on debentures; doubts whether the money could be obtained in that way; after the completion of the purchase of the Rev. Mr. Butler's houses and land, there will remain 6,000*l.* for improvements, and this he would use, at the same time appealing for donations and assistance to old Shrewsbury men; 832–843.

SHREWSBURY, Corporation of, page 325.

Mr. Trouncer, the Mayor, hands in a memorial from the Corporation to the Commissioners, suggesting improvements in the School, and asking opportunity for suggestions as to exhibitions, fellowships, and scholarships. *Mr. Southam.*—Has resided in Shrewsbury nearly all his life, and has a very large family, but cannot send his sons to the School without paying the same fee as a stranger; being one of the largest ratepayers in the town, thinks he ought to have his sons educated gratuitously, or on payment of a small fee; another disadvantage of Shrewsbury is, that the existence of this School prevents the opening of other schools for the middle classes; is not one of the burgesses, but thinks the residents entitled to the same privileges as the burgesses, who are a diminishing body. (*Mr. Peele* explains that formerly any respectable inhabitant was made a burgess on payment of a fee of 10 or 15 guineas, but this was stopped by the Municipal Corporation Act; 339–344. (*Mr. Southam* wishes for a classical, but not a college education; does not know whether the non-collegiate class in the School would meet his wishes; feels that while there is education provided for the upper and lower classes, there is none for the middle; objects to the early school in winter; thinks a fee of 5 guineas a year, instead of 15, would meet the expense not borne by the foundation; 345–362. The subject pursued at length; 368–396. (*Mr. Peele* further explains the burgess right; a descendant of a burgess, a person who has served seven years to an incorporated trade of the town, or one born within the ancient liberties, may take up his burgessship, and his son, if born in the town, would have the privilege of gratuitous education; the incumbent of one of the parishes came to Shrewsbury with several sons, and it was stated to him that his ancestors, some generations before, had been sworn burgesses; his pedigree was proved, he was sworn a burgess, and his sons were admitted to the School; 363–367. (*Mr. E. Hughes* has two sons at the School, one in the classical, the other in the non-collegiate school, and is satisfied; still agrees with Mr. Southam that the non-collegiate School might be improved; so long as the burgesses' rights are preserved, the burgesses would not object to extend the School, by capitation or otherwise, to all who claimed the benefit; there are about 380 burgesses' sons entitled to the privileges of the School, and in the county probably many thousands; was a Shrewsbury boy himself, under Dr. Butler; the education in his time was classical only; does not regret the time he spent there; on the contrary, owes his position in the town to it; still, an important part of his education was neglected; when he left school he did not know that 2 and 2 made 4; an improvement had since taken place, but even now there was not enough arithmetic taught; 396–405. (*Mr. J. H. Edwards* expresses his opinion of various town and

SHREWSBURY, Corporation of.—*cont.*

school matters; describes the school he wants to see established. (*Lord Clarendon.*—Pretty much Dr. Kennedy's non-collegiate education. (*Mr. Edwards.*—Pretty much. Opinion as to Shrewsbury School preventing the establishment of other schools at Shrewsbury; objects to the early school in winter; 405–432.

SHREWSBURY SCHOOL; the Governors, Trustees, and Treasurer of Shrewsbury School, page 339.

Concur in an opinion expressed by Lord Clarendon that the state of the buildings at Shrewsbury is the operative cause of the decline of the School; however attached they may be to the School from certain reminiscences, there are reminiscences of another character which deter parents from sending their sons to a place where they themselves suffered from want of accommodation; 723–725. (*Mr. Peele.*—The Trustees have applied to the Charity Commissioners to sanction a purchase of some property from the Rev. Mr. Butler and the plan of Mr. Christian, architect, for making the new property as well as the old available for the School, using the funded surplus revenues of between 9,000*l.* and 10,000*l.* for the purpose, and the Commissioners have treated the application favourably, but the matter is in abeyance pending the present enquiry; 726–729. (*Mr. Warter.*—The scheme at present is to build a new Second Master's house, that being in the worst state, but the architect's plan embraces the Head Master's house also, with accommodation for 80 boarders; 729–734. Borrowing money for improvements impracticable; 735–742. (*Mr. Bather.*—It was suggested that the Trustees should make an appeal to old Shrewsbury men to contribute towards the expenses; thinks this would realize several thousand pounds; suggests new arrangements with regard to the boarding houses; when he was at the School there were 301 boys in it; the highest number of late has been 140. (*Mr. J. Lloyd.*—At one time there were 285 boarders; 743–758. Opinions as to fees and salaries; 759–764. (*Mr. Bather.*—With regard to the non-collegiate class, feels, as a Trustee, that he ought to object; under the present scheme it could not be carried out; the scheme states what shall be taught in the school, and the Trustees do not see what right the Master had to make exception as to one part of it; he might as well leave out the Church Catechism or the Liturgy as Greek and Latin composition; there are certain things coming in, as the arts and sciences, which may be taught or not, but the things stated in the first part of the scheme are compulsory on the Masters to teach, and they have no right to omit anything; their duty is to teach Greek and Latin to every boy who comes to the School, and omitting the Greek destroys the character of the School. (*The Mayor.*—Thinks Dr. Kennedy's alteration is a great improvement. (*Lord Lyttelton.*—The question is whether it is legal or not. (*Mr. Warter.*—After the non-collegiate class had been started, it struck Dr. Kennedy that he had no authority to do it by the clause, and he submitted the difficulty to the Trustees, who declined to interfere. (*Mr. Bather* looks upon this class as the thin edge of the wedge, which, if driven home, would convert a classical into a commercial school; 764–773. The Trustees have neglected to carry out the examination by an examiner appointed by the Bishop of Lichfield, as required by the scheme, but substantially perhaps the work is done by the examination of Dr. Kennedy, and no bad results follow; as a precedent the neglect is as bad as can be; the subject pursued; 774–780. (*Mr. Peele.*—The burgesses attach great importance to their preferential claims to exhibitions; 781, 782. Item of "arrears" explained; one or two of the great tithe owners had not paid in time but paid afterwards; 783. (*Mr. Warter.*—Physical sciences have not been considered by the Trustees; thinks the majority would be in favour of the teaching; 784, 785.

PRESENT :

Earl of Clarendon.	Hon. Edward Twisleton.
Earl of Devon.	Rev. W. H. Thompson.
Lord Lyttelton.	H. Halford Vaughan, Esq.
Sir S. Northcote.	

The EARL OF CLARENDON in the Chair.

GENERAL EVIDENCE.

W. B. Carpenter, Esq., M.D.

17 Nov. 1862.

W. B. Carpenter, Esq., M.D., F.R.S., called in and examined.

1. (*Lord Clarendon.*) I believe, Dr. Carpenter, you are the Registrar of the London University ?—I am.

2. How long have you been Registrar ?—Six years.

3. I believe you are likewise a member of the Council of the Royal Society ?—Yes.

4. As you have very kindly consented to give us your opinion on certain matters connected with the subject of our inquiry, and particularly with reference to the natural sciences, I would beg leave in the first place to ask you what are the subjects, some acquaintance with which is essential for matriculation at the London University, and how far an elementary knowledge of the sciences is necessary for matriculation ?—An elementary knowledge of the physical sciences is required to the extent which you will find in the programme before you.

5. (*Mr. Thompson.*) I see it says, "The knowledge " of these subjects is such as may be attained by at- " tending a course of experimental lectures " ?—Yes. It is not intended that any of those subjects should be treated mathematically, but there must be simply a knowledge of the facts, and the laws of those facts ; for example, the laws of motion, the composition of forces, and the principles of the action of the simple machines, the centre of gravity, and the law of the motion of falling bodies. It is required that the candidate should be acquainted with those as facts of nature,—not with the mathematical demonstration of the laws, but simply with the laws, and that he should be able to apply those laws. The questions which are asked are not merely what are the laws, but questions involving the application of those laws to cases which may not have been within the knowledge of the student.

6. (*Lord Clarendon.*) How would you draw the line between those facts and the mathematical demonstration of them ?—The composition and resolution of forces, for example, treated mathematically, requires an advanced knowledge of mathematics ; but the general fact that a body acted on by two forces in different directions will move in a diagonal line which expresses the result of those two forces, and the mode in which that fact is applied in the common occurrences of life, such as, for instance, rowing a boat across the stream with a tidal current, are subjects of examination with which the candidate is expected to be conversant. So again, with the pressure of liquids and gases, and the knowledge of what specific gravity means, and of how specific gravity may be ascertained; with the principle of the action of the barometer, the syphon, the common pump, the forcing pump, and the air pump. In acoustics he should be able to explain the nature of sound, and to answer all the elementary questions in regard to echoes and the rate of the transmission of sound, but without any mathematical treatment of those subjects. In optics he is expected to understand the laws of reflection and refraction, and the formation of images by simple lenses. Questions are asked to test the candidate's knowledge of those laws, and his power of applying them, but not going into the higher departments of optics. Under the head of Chemistry, the candidate is required to have studied the phenomena and laws of heat, the sources of heat, the general effect of the expansion of bodies, the action of the thermometer, and the relation between the different scales in common use. Such questions are frequently asked, as, for instance, " convert 60° of Fahrenheit into the corresponding " degree of a Réaumur or a Centigrade thermometer." This is useful to every person who reads foreign scientific books ; as these express temperatures in degrees of the Centigrade scale, with the exception of those that give them in Réaumur. Then there is the difference between the temperature and quantity of heat, the doctrines of specific and latent heat, and the various modes of measuring heat, the action of heat on the condition of bodies producing liquefaction, ebullition, and evaporation, the doctrines of conduction, convection, and radiation of heat; all these being subjects a knowledge of which is applicable in all the familiar concerns of life. The requirements in Chemistry (strictly so called) are limited to the non-metallic elements. Formerly a wider range was taken, but it was found that it was practically better to limit the requirements to the non-metallic elements, and to expect a higher range of knowledge in them; because every student in chemistry necessarily commences with the non-metallic elements, such as oxygen, hydrogen, carbon, nitrogen, chlorine, bromine, iodine, fluorine, sulphur, phosphorus,

GENERAL EVIDENCE.

W. B. Carpenter, Esq., M.D.

17 Nov. 1862.

and silicon. In every course of chemistry these are always the first subjects of discussion; and it is in regard to the properties of those substances and their combinations that the laws of chemical action are first elicited. Then there is the doctrine of combining proportions by weight and by volume; the general nature of acids, bases, and salts; symbols, and nomenclature. These are the subjects first treated of; and therefore it was thought best to require a better and more thorough knowledge on those subjects, than a more vague and discursive knowledge of a larger range of subjects. Then, as connected with the foregoing, and as having very important and practical applications, there is the constitution of the atmosphere with the effects of animal and vegetable life on its composition; and, further, the phenomena of combustion, the structure and properties of flame, and the nature and properties of ordinary fuel. These have practical applications in common life, which every person should be prepared to understand scientifically. So again with regard to water, the chemical peculiarities of natural waters, and then the most important compounds of the non-metallic substances, carbonic acid, the oxides and acids of nitrogen, ammonia, olefiant gas, marsh gas, sulphurous and sulphuric acids, and sulphuretted hydrogen, are named as subjects of which every well educated person ought to know something. So, again, with hydrochloric acid, phosphoric acid, phosphuretted hydrogen, and silica.—I think the view of the Senate in forming this programme was not only that the knowledge here exacted would be a most valuable basis to the more extended study of the subject; but that in itself it would be very valuable for every person who desires to proceed to the degrees of the University to obtain *in limine* this knowledge, and thus to have his mind brought in contact with chemical facts and chemical principles.

7. This preliminary knowledge, then, to which you have called our attention, is that which is required in these different subjects, for Matriculation?—Yes.

8. In all these subjects?—Yes. I should explain perhaps that this Matriculation examination is the entrance examination of the University, which every candidate is required to go through, whatever may be his ulterior destination. There are three faculties in which he may proceed—Arts, Science, and Medicine; and all candidates pass the same matriculation examination.

9. Do many of the young men who have passed through our great public schools apply for admission into the London University?—Not any large proportion. They more frequently come from the proprietary schools. I presume you are speaking of such schools as Harrow, Eton, Winchester, and Westminster?

10. Yes?—A much larger proportion come up from the various proprietary schools. Several come to us from Marlborough College, which is, I think, a school for the sons of the clergy.

(*Lord Devon.*) Not exclusively.

(*Dr. Carpenter.*) A good many come from that, but very few from either Eton, Harrow, or Rugby.

11. (*Lord Clarendon.*) Do you find that the young men coming up to you from proprietary or private schools are generally prepared to pass their matriculation in the subjects of which you have just given us a list?—Yes, very generally. I cannot say how far they are prepared by courses of instruction given in the schools; but the rejections in those subjects are not larger in proportion than they are in other subjects, mathematics and history for instance.

12. In fact, it being known that an elementary knowledge of those subjects is required for matriculation, the boys are prepared?—Yes.

13. But you do not know whether they are prepared for the London University at the schools, or whether there is some intermediate tuition that they have the benefit of?—I know in regard to some public schools, University College school for instance, that there are regular courses of instruction. In many private schools which regularly send up candidates for matriculation, I know that there are regular courses of instruction; but I cannot say with regard to the general body of proprietary schools whether such is the case.

14. Do you happen to know whether in the examination for matriculation in classics more is required from young men at the London University than is required at Oxford and Cambridge?—Do you mean at the matriculation at Oxford or Cambridge?

15. Yes?—That I believe varies very much with the different Colleges. At some Colleges it is very slight. At Balliol College, on the other hand, it is a very severe examination, almost like a scholarship examination. Ours is much more severe, however, than at many colleges; I might say that it is fully upon a par with the "middle-class" examinations of Oxford and Cambridge, because we have had many candidates who have gone to both.

16. You are speaking of matriculation?—Yes; the amount of classics required at our matriculation examination is as much as is required at the senior middle-class examination.

17. (*Sir S. Northcote.*) Do you mean the examination for the degree of A.A.?—Yes. There is a senior and a junior examination. We have had several candidates who have passed that examination and who have come up afterwards to ours, and they have said that ours is quite as strict.

18. (*Lord Clarendon.*) That is in classics?—Yes.

19. (*Mr. Vaughan.*) Who is the classical examiner for the matriculation?—At the present time Dr. William Smith and Mr. Blakesley.

20. (*Lord Clarendon.*) Will you give me leave to ask your opinion as to the ability of graduates who have taken degrees in Science, as compared with those who have taken degrees in Arts?—Our scientific degrees are of too short standing to enable me to give an opinion.

21. You mean to say that the degree in science is but recently instituted?—Yes, it is a new degree. I might perhaps make a remark in regard to the relative character of our graduates in Medicine, because our training of medical graduates is essentially a scientific one. We lay very great stress on the scientific proficiency in Chemistry, Anatomy, and Physiology, as a basis for its practical applications in Medicine, Surgery, and Midwifery; and this scientific part of the curriculum, which lasts two years, may be considered as the equivalent of the Arts curriculum, of which the duration is the same. Taken in connection with the matriculation examination which precedes it, the first portion of the M.B. curriculum may be considered as very closely representing that of a Cambridge B.A. who "goes out" in Science. It is quite conceded by all who are acquainted with the University of London that its Medical graduates take a decidedly higher stand as a body than its Arts graduates; and that the *prestige* of the University of London rests very much on the character and attainments of its Medical graduates. I could state various facts which show that our Medical graduates are now coming to take the highest position in the medical profession for their standing; the physician to the Queen, for instance, is one of our graduates.

22. Have you been able to form any opinion as to the use of the physical sciences as a training of the mind as compared with pure mathematics?—I think that their function is quite different. I think that each is a supplement to the other. I should be very sorry to see either left out. It appears to me that the use of the physical sciences is to train a class of mental faculties which are ignored, so to speak, by a purely classical or a purely mathematical training, or by both combined. The observation of external phenomena, and the exercise of the reasoning faculties upon such phenomena, are matters altogether left out of the ordinary public school education. I am speaking of schools in which classics and mathematics are the sole means of mental discipline. Mathematical train-

ing is limited to one very special kind of mental action.

23. In the schools?—I mean that mathematical training exercises the mind most strenuously in a very narrow groove, so to speak. It starts with axioms which have nothing to do with external phenomena, but which the mind finds in itself; and the whole science of mathematics may be evolved out of the original axioms which the mind finds in itself. I do not go into the question whether they are intuitive, or whether they are generalizations of phenomena formed at a very early age; in either case the mind finds it in itself. Now it is the essence of scientific training that the mind finds the objects of its study in the external world. As Bacon says, "*Homo minister et* "*interpres naturæ*," so it appears to me that a training which leaves out of view the relation of Man to external Nature is a very defective one, and that the faculties which bring his intelligence into relation with the phenomena of the external world are subjects for education and for discipline equally important with the faculties by which he exercises his reason purely upon abstractions.

24. Then you consider that the mind, if it only had the training that could be given by close study, of classics, and of pure mathematics, has not had so great an advantage in training as if the study of physical science had been added?—I am quite of that opinion; and I may add that having given considerable attention to the reputed phenomena of mesmerism, electro-biology, spiritualism, &c., I have had occasion to observe that the *want of scientific habits of mind* is the source of a vast amount of prevalent misconception as to what constitutes adequate proof of the marvels reported by witnesses neither untruthful nor unintelligent as to ordinary matters. I could name striking instances of such misconception in men of high literary cultivation or high mathematical attainments; whilst I have met with no one who had undergone the discipline of an adequate course of scientific study, who has not at once recognized the fallacies in such testimony, when they have been pointed out to him.

25. (*Lord Devon.*) I observe, Dr. Carpenter, that your matriculation examinations do not take place until the applicant is past 16?—Yes.

26. Being of that age, you see great benefit in making natural philosophy and chemistry part of that examination in addition to a certain examination in classics, and you consider that not merely as fitting a boy for success in the active business of after life, but also as a means of training the mind, and that much benefit results from such combination. I should like to ask you whether you would consider that similar recommendations exist to the introduction of physical sciences at an earlier age. You applied your observations to your own candidates for matriculation?—I think that there is great advantage in commencing very early. I have commenced with my own children at a very early period in training their observing faculties simply to recognize and to understand, and to describe correctly what they see, showing them simple experiments, and desiring them to write down an account of them; and from my own experience I should say that a boy of 10 years old is quite capable of understanding a very large proportion of what is here set down under the head of natural philosophy.

27. (*Lord Clarendon.*) Is there not a danger of disturbing the power of sustained attention, if too many subjects of instruction are brought before boys at an early age?—I think that very much depends on the manner in which it is done. A good teacher need never forfeit the training of sustained attention by directing that attention to the facts of nature, because the attention is as healthfully exercised in the observation of what is going on before the child, as it is in the study of a book.

28. Were you at a public school yourself?—I was not.

29. You were at a large classical school, were you not?—I was brought up in a private school.

30. A large school?—About 20 was the average number.

31. Should you, from your experience as a boy, confirm the opinion which you have now expressed?—In the school in which I was brought up all these subjects were taught systematically, and I certainly believe that there was no deficiency there of power of attention, and that the training which was given in classics and mathematics, which was a very substantial one, was not at all impaired by the attention to these other subjects.

32. At what age did attention to these subjects commence at your school?—I should think that about 12 years might be taken as the average.

33. Have you any practical acquaintance with the system of our public schools?—Not practically. I know the system generally.

34. You know the amount of time, perhaps, given to particular subjects, speaking generally?—Yes.

35. Have you formed any opinion as to whether it would be desirable to diminish the proportion of time given, say to classics or mathematics, for the purpose of introducing physical science?—I have formed an opinion that at the earlier age, say from 10 to 12 or 13, the amount of study given to classics may be advantageously diminished. I have been led to conclude, from considerable opportunities of observation, that those who have commenced classics later than usual and have been of average intelligence, have by the age of 16 acquired as good a classical knowledge as those who have begun earlier, whose minds have been fixed upon classical study for two or three years longer. I may state that that is quite the opinion of many gentlemen of very large experience in education, and I believe I may quote Professor Pillans of Edinburgh as entertaining it. Dr. Hodgson, who had for a long time a large public school in the neighbourhood of Manchester, wrote a pamphlet some years ago in defence of that opinion.

36. In the cases to which you refer, what had been the previous education of the lads before they took up classics; of a fair general character?—Yes. I may specify the case of one of my own sons, on whom I thought I would try the plan, partly in consequence of the impression made on me by Dr. Hodgson's pamphlet, and partly on account of a deficiency of bodily and mental vigour in the boy himself. The training was general, with French; a good deal of attention being given to that language because I quite hold that every child ought very early to begin the study of another language. I agree with those who consider that we do not understand the meaning and the value of language, until we have tried to put our thoughts into a language different from our own.

37. You adopted French therefore partly with the view of teaching the principles and application of grammar?—Yes.

38. Which is one recommendation as you know on which classical instruction is based?—Yes; and I chose French on account of its giving in many respects the construction of Latin.

39. (*Mr. Thompson.*) You would then prefer to begin with French?—I think there is a great deal to be said for that. I do not say that I would do so with every boy; but the observation was drawn from me in reference to this question,—whether time might be spared from classical studies in the earlier period of education. I could quote several instances of young men who have shown a very remarkable proficiency in classical study at the age of 16 and 17 who began very late, at 13 and 14.

40. (*Lord Devon.*) I understand you to attach very high importance to the philosophical study of language?—Yes.

41. (*Lord Clarendon.*) And to its being commenced early?—Yes.

42. (*Mr. Thompson.*) How long has this examination existed?—It has existed from the commencement of the university in 1849.

43. In this form?—Not quite. There have been

GENERAL EVIDENCE.

W.B. Carpenter, Esq., M.D.

17 Nov. 1862.

alterations from time to time. At one time there was an option between chemistry and natural philosophy, but they were both made imperative about seven years ago.

44. Has it become more stringent or less stringent in the course of time?—Decidedly more stringent. At first only one book of Euclid was required. About three years ago, in consequence of representations from teachers, the requirement was extended to the first four books. I may state that whenever there has been an increase of stringency, there has been a temporary reduction in the number of candidates, but only temporary, for the next year the number has advanced beyond any previous number. We have had a constant increase in the number of candidates.

45. What was the number last year, do you recollect?—About 480.

46. And of those what proportion do you think passed?—About two-thirds. I am speaking in round numbers.

47. And one-third were rejected?—Yes.

48. (*Lord Clarendon.*) Was that for matriculation or degree?—Matriculation.

49. (*Mr. Thompson.*) Do you ever yourself examine on any of those subjects?—No. I was nine years Examiner in the University before I became Registrar; but in the Medical faculty.

50. You have not examined in natural philosophy, for instance?—No.

51. You do not know what proportion of candidates were rejected in consequence of failure in natural philosophy?—I do know, because all the reports came through my hands. Sometimes candidates are rejected in one or two subjects; but more generally they are rejected in three, four, five, or six subjects; and I can say this, that the number of rejections in natural philosophy and chemistry is about the same, for instance, as in mathematics, in classics, in English, or in French. There is a very general average through the whole series of subjects.

52. I suppose marks are given in this examination?—Yes.

53. What proportion of marks, do you happen to know, is it necessary for a candidate to get?—I think one-third is the usual passing proportion.

54. (*Mr. Twisleton.*) I believe you are author of a work called "The Principles of Physiology, General "and Comparative"?—Yes.

55. You are likewise author of a work called "The "Microscope and its Revelations"?—Yes.

56. I believe you are also the author of an "Intro-"duction to the study of Foraminifera"?—Yes.

57. Do you consider that your taste for those studies was awakened at school?—My taste for physical and chemical science was certainly awakened at school. The training that I had in my school course, and the advantages which I had of attending lectures at the Philosophical Institution at Bristol at the time that I was going through that course, certainly tended to develop my taste for science generally. At that time I knew next to nothing of natural history; and I suppose it was the circumstance of my having entered the medical profession, and being led to seek for scientific culture in the subjects on which medicine is founded, that caused me to direct my attention to natural history and physiology,—physiology as based on natural history in fact.

58. You were likewise instructed in mathematics at school?—Yes.

59. Had you any occasion to observe at school that there was one class of minds which had a great aptitude for mathematics, another for the physical sciences, and another for the classics, so that there were three different types of mental intelligence?—Yes.

60. Do you not consider that it is an injury to a boy who may have a turn for the sciences of observation or for other natural sciences, that he has no instruction in them whatever up to the time he is 18, up to the time of his going to the university?—I feel that very strongly. I am quite satisfied that there is such a class of minds. I see it in the candidates for our degrees in science. Though the degrees have only been instituted two or three years, yet I am quite certain from what I have seen of those who have become candidates for them that there is a very decided aptitude for physical sciences, and that those generally are persons who have a distaste for classics. I may say with regard to myself that I never had any taste for classics. I went through a very long course of classical training, and I feel very strongly indeed the value of the discipline which it gave me; but I never, as a boy, had any taste for classics (though now I can come back and read a classical author with pleasure), because I was weary of the drudgery of the ordinary routine of instruction (to which I had been subjected from an unusually early age), whilst at 16 my mind was not sufficiently advanced in that direction to appreciate the higher beauties of a classical author. For instance, I could then read the Prometheus, but I did not understand its argument.

61. It would be an injury to the mental capital of a nation, so to say, to give no instruction to boys in the physical sciences up to 18?—I should certainly consider that it leaves that branch of the mental faculties which every individual has in a certain degree, uncultivated, and would leave without cultivation those powers which certain individuals have in a very remarkable degree.

62. Is it not the case that there are some boys at school who have only a slight aptitude for classical studies, who have an aptitude for the sciences of observation and the experimental sciences?—I am quite certain of that. I have five sons, and in their education I endeavour to train what I perceive to be the special aptitude of each. Thus my eldest son has shown a decided aptitude for the physical and chemical sciences: he has taken his Bachelor of Arts degree in the university, and has now taken that of Bachelor of Science. He took the Bachelor of Arts degree because at that time there was no degree in Science: he went through the classical training required for it, but his whole bent is for the exact sciences. On the other hand my second son has as strong a turn for literary culture as my eldest son has for scientific, and I have encouraged that just as much as I would the scientific culture; taking care, however, in each case that the other subjects were not neglected.

63. (*Mr. Vaughan.*) I think you mentioned that you considered that the study of physical science at an early age was conducive to the cultivation of the intellectual faculties as well as of the senses?—I think so decidedly, if it is rightly taught. I think very much depends on the teacher.

64. Do you think that that kind of cultivation of the intellectual faculties which physical science requires and encourages is such as the man may be safely called upon to go through at an early period of life?—I feel quite sure of it, because it is done to a very large extent in our National schools, and in our British and Foreign schools. I happen to know that from this circumstance: a few years ago Lord Ashburton requested me to examine for a prize which he at that time gave to the masters of schools in, I think, Hampshire, Wiltshire, and Dorsetshire. I set three or four papers on physical science and its applications—very much the kind of papers that one would set for the matriculation examination, with as much as possible of practical application to the common affairs of life, to what I think the Dean of Hereford calls "common things,"—but requiring a knowledge of principles; and I was extremely surprised at the excellence of the answers which I got. One master, a young man not above 20 years of age, answered every question perfectly well.

65. Do you think that the mind, ordinarily speaking, is as apt for the exercise of its faculties upon the subjects of natural science as upon grammar and mathematical subjects, at the early period of life?—I should say more so; that it is more easy to fix a child's attention upon something which it sees, than upon an abstraction.

66. Do you think that in that point of view, in fact, it is so far a subject better calculated to call out a healthy action of the reasoning powers than the more abstract subjects of grammar and mathematics?—I think it is, at the early period. I think that a lad of from 10 to 12 years of age is better fitted to be led to observe and reason upon what he observes in objective phenomena, than he is to reason upon abstractions. I think that from say 12 years of age, the powers may be healthfully exercised upon abstractions; but as far as I can judge, a child in learning a language learns by rote purely or almost purely up to say 12 years of age; but after that he begins, if he is well taught, to understand the *rationale* (so to speak) of the rules, but it is a mere matter of memory with him up to that time.

67. In fact you doubt whether in the cultivation of language the reasoning powers are much exercised at all at that time?—Yes.

68. And is it upon that ground also in part that you have suggested the propriety of deferring the attempt to teach the scientific study of grammar, such as is required in the cultivation of the classical languages to a later period?—Yes; partly for that reason, and partly because the beauties of a classical author cannot be understood in the earlier period. A lad of 12 years if reading Virgil, for instance, will I think not have much appreciation of the beauty of his style and diction unless he is a lad of a remarkably poetic turn of mind. I do not think Horace can be at all understood by a lad 12 years of age; that poet's turn of thought would be quite unintelligible to him, usually speaking.

69. Have you been sufficiently in company with youths emerging from childhood, to say whether there is in your opinion at all a natural curiosity which arises at that time for the observation and comprehension of the phenomena of nature?—I should say there is. I have seen a great deal of youths of different ages in the course of my life. I have been always interested in education, and have seen and known a great deal of what takes place in education among the humbler classes; and amongst them there is most decidedly a readiness of observation, and a readiness of power of apprehension and of reasoning upon phenomena of nature, which shows that that must be universal.

70. Have you observed that besides that power there is a curiosity with regard to the phenomena and an interest in that sense with regard to the phenomena of the outward world?—I think there is if it is not repressed. My opinion is that the tendency of public school education is to repress all that curiosity, to withdraw the attention so completely from those subjects that it has no development.

71. With regard to the study of language, I think you said that you had had some opportunity of observing that youths who began later could make so much progress owing to the different state of their faculties then as that they could recover the amount that had been lost to the study of language by deferring it?—Yes; providing always that their mental habits have been properly trained, that the power of sustained attention for instance has been exercised in other ways.

72. Are you aware whether there has ever been established any school in which there has been a systematic attempt to teach the classical languages at a later period of life in preference to teaching them earlier according to the common system?—I am not aware that that has been carried out on a large scale.

73. But your own observation, as I understand you, has supplied you with the facts?—I have seen many individuals.

74. (*Mr. Thompson.*) Individuals who have really distinguished themselves you mean?—Yes.

75. (*Mr. Vaughan.*) In speaking of the physical sciences as an instrument of education early in life, can you tell us what you would include amongst those physical sciences?—I should include very much what is laid down in this programme, as regards natural philosophy and chemistry; but I should also include some training in the natural sciences, zoology, botany, and physiology, because I think that they exercise an order of faculties distinct from what are exercised here. The sciences of classification are I think very valuable in training the mind in observation of complex phenomena. Every animal, every plant, to a zoologist and a botanist, is a complex assemblage of phenomena. Now in the physical sciences the phenomena are reduced to their simplest form; but the decomposition of these complex combinations, and then the recomposition of them in classification is I think a most valuable exercise to the mind.

76. I asked the question because I observe that the science which I understand you to have particularly cultivated, which is physiology, is omitted amongst those that are required for matriculation?—Yes.

77. Can you tell us what is the reason of that omission?—I think that physiology was considered too advanced a subject. It is included in all the later examinations. Our Bachelors of Arts have to go through an examination in physiology as well as Bachelors of Science. It is an elementary examination, but I think it was considered a subject more for the advanced student. I would not say physiology at so early an age, but the sciences of classification, such as zoology and botany.

78. What is the age at which you think physiology might be usually commenced?—I think it might be combined with zoology, because no one can learn zoology in the modern sense without some knowledge of the structure of animals. Zoology was formerly a science of mere classification based on external characters; but now the whole modern system of zoology being based upon a knowledge of internal structure, it is impossible to study it without that knowledge, and with that knowledge the elements of physiology would be almost necessarily combined; for instance, the structure of the respiratory apparatus in the different groups of the animal kingdom is a matter of the highest importance in classification; the difference between a fish (for instance) and an air-breathing animal is based on that difference of respiration; so that the mode in which all the leading functions of life are performed necessarily comes to be learnt in zoology without making a special study of physiology.

79. Then is it or is it not the case that physiology applies the truest and most philosophical principles of classification?—Unquestionably.

80. Therefore the classificatory part can hardly be learnt intelligently without some knowledge of those principles?—That is so. The classification is rather founded on the structure, while the science of physiology deals with the action. The knowledge of structure is essential to both. It is essential on the one hand to a true zoological classification, it is essential on the other hand to a knowledge of the function.

81. Now with regard to their bearing on literary studies: do you think that the mixture of the physical sciences with the literary studies would be a mixture which would be conducive of benefit to both, or otherwise?—I think decidedly conducive of benefit, because I cannot think that any mental training can be really adequate, which is one-sided; and again, all experience shows that a change of study from one subject to another is advantageous in this way, that it is a positive refreshment to the mind. I believe that a lad who has been exercised a certain number of hours in the study of language, or in the study of mathematics, would enjoy going to the study of physical science. If it is properly handled by a good teacher, he would enjoy that as much as he would enjoy going into some desultory course of reading for recreation.

82. In fact the exchange would produce very much less physical exhaustion than the continuance of the same study for the same number of hours?—Yes, I feel sure of that. I may mention that there is at present going on a good deal of inquiry in regard to

GENERAL EVIDENCE.

W. B. Carpenter, Esq., M.D.

17 Nov. 1862.

the number of hours which can be healthfully employed in study by the class of children who attend the National and British Schools; and it is a subject in which I have taken a great deal of interest. I have happened to come in contact with a good many individuals who are working out experiments in different ways, and there is a very general conviction amongst the better and more intelligent class of masters in those schools, that four hours a day is as much as can be healthfully employed in purely intellectual acquirement by children of that class. Now I believe that the allowance which is healthful for children of that class may be perhaps doubled for those of an educated class.

83. (*Lord Clarendon.*) At what age?—Say from 8 to 12; but the prevalence of this conviction shows that the masters practically do not find that the children learn more who are at school for 6 or 7 hours, than those who are at school for only from $3\frac{1}{2}$ to 4 hours.

84. (*Mr. Vaughan.*) Do you think that you would find a different, that is a larger measure of hours suitable to health if there was this difference in studies at different times of the day?—Yes, I feel sure of it.

85. I suppose you say that as a physiologist?—Certainly, I should be very sorry to be tied down to one study all my life.

86. I mean as to the effect on the constitution?—Yes, I am speaking as a physiologist decidedly. I am quite satisfied of it as a fact in our mental constitution.

87. (*Mr. Twisleton.*) You mentioned a difference of the time that might be devoted to intellectual occupation in that class and in another class. Will you explain why there was a difference?—I think that the children of educated parents have much less difficulty in applying their minds to intellectual study. It is a much less effort to them to apply their minds, than it is to children of uneducated parents. I am satisfied that there is an inheritance of aptitude for intellectual pursuits. I think I might say that as much as eight hours a day could be given to intellectual study by the child of an educated stock, with no worse result, no more fatigue, than four hours by the child of an uneducated stock.

88. (*Sir S. Northcote.*) You said just now that you thought there were instances of boys taking up the study of classics late, and if they were properly trained in other ways making up for the lost time by the superiority of their power of application and of learning. Do you think that that might be the case also in the study of physical science, that a boy taking to study physical science late might make up for lost time by beginning at an age at which his powers were more developed?—I have no doubt he might make up for lost time: but I think that the natural period for commencing the study of physical science is at an earlier age, because I think any right system of education will take up the faculties in the order of their development; and it is quite certain that the observing faculties are developed before the reasoning powers. An infant during the first year of its life is educating its observing faculties in a way we really scarcely give it credit for; and the training of the observing faculties by attention to the phenomena of nature, both in physical and in natural science, seems to me to be the natural application of time at the age of say from 8 to 12.

89. In the case you spoke of, of a boy beginning classics not earlier than 12, and gaining on others by the time he was 16, you said he had had training in the French language at an earlier period?—Yes.

90. You may consider, I suppose, the training in any language as preparation for the training in another. Therefore, in the case of that boy the training in language or in grammar was begun at an early age, was it not?—Yes, but nothing like the time was given to it which would have been given to classical study, supposing he had been going through a course of classical training.

91. Do you not think, then, that your argument resolves into this, that to begin studying classics through French is a good way of beginning to study them?—That was the point to the best of my recollection very strongly advocated by Dr. Hodgson in an article which he wrote on the subject in, I think, the Westminster Review, which was afterwards published separately.

92. I understood you a little while ago in answer to question put by Lord Devon to say that you thought room might be made in our system of education for the early study of physical science without overworking the boy by putting off the beginning of the study of classics till a rather later period of life. That was so, was it not?—Yes.

93. At the same time you supported your argument by the case of a boy who had studied French as an introduction to the study of Latin and Greek, and had not suffered in his classical studies by deferring them. Would you not think that a boy would suffer in the study of languages by wholly giving his early years to the study of physical science, and not taking up language at all till he got to the age say of 12?—Yes, I think he would. I think that neglecting the study of language altogether would be a very undesirable thing; but what I mean is this, I should prefer to see the faculties which are concerned in the cultivation of physical science trained at the earlier period, because I believe that is the natural period at which the observing faculties and the elementary reasoning processes may be best cultivated, and the period at which the mind is not prepared for the more advanced culture of language.

94. But is it not the period at which it is also prepared for the commencement of the culture of language?—Certainly, but then I think all that the culture of language may give at that period may be given in a smaller number of hours than are usually devoted to it.

95. (*Mr. Thompson.*) You would say that verbal memory was as striking a characteristic of very young minds as the tendency to observation?—Certainly, and I consider that the training in a language is a most valuable instrument for cultivating the verbal memory.

96. (*Sir S. Northcote.*) Has it ever struck you that there is a period in a boy's life, perhaps at the age of 13, 14, or 15, when the moral character seems to be developed rather than the intellectual, when there is a pause in the power of acquiring intellectual knowledge, and a development of moral character?—I am very much of that opinion. I would not say there was a pause. I think that the introduction of a new element, so to speak, the moral element, modifies the exercise of the intellectual powers.

97. But that the period before that is the time in a boy's life in which he ought to acquire a good deal of the routine and rudimentary knowledge he is to make use of in after life?—Yes.

98. And this knowledge he can acquire with less distaste and more advantage than he would if it were left to a later period. Would it not be the case that with reference to the disagreeable part of the beginning of Latin and Greek, he would acquire it better in the earlier years before that development of the moral system begins?—In the cases to which I have alluded, those things that are so disagreeable to the child have not been felt so disagreeable to the youth beginning at a later period. I may give a curious illustration from another subject which occurs to me. I remember hearing Professor Key, of University College, mention that he had in early life a private pupil, who had gone through the complete Eton course, which at that time was only classical. Even ordinary arithmetic was not taught, much less any mathematics; and he happened to find out accidentally that this young man, an intelligent young man in other respects, not only had never learned his multiplication table, but did not know there was such a thing as a multiplication table. He was buying several pairs of silk stockings in a shop,

and to find out how much he had to pay he was adding the price of one pair to the second pair and that to the third pair, and so on. When he found how much his labour would be facilitated by the multiplication table, he applied himself to master it, and learnt it off in the course of a few days with the keenest pleasure.

99. (*Lord Clarendon.*) How long ago was that?—In the pre-mathematical period at Eton, I suppose.

100. (*Sir S. Northcote.*) Would you advocate putting off teaching a child the multiplication table till he became conscious by his own experience of the necessity for it?—No. I merely mention it as an illustration that things which are commonly regarded as very disagreeable, when better understood may come to be pleasant. So I have observed in classical study that when the *rationale*, if I may use the word, of the cases, the genders, and the construction of verbs comes to be appreciated as a matter of intelligence, they are learnt with far less difficulty than when acquired merely by rote.

101. Your experience is chiefly drawn from those young men who come as candidates for admission to the London University, is it not?—Yes.

102. Are not by far the larger proportion of those young men who intend to pursue physical studies in after life?—No; by no means a large proportion of those who go on to our arts degree.

103. So that you think they afford a fair sample of the rising generation?—Yes.

104. (*Mr. Twisleton.*) A question was asked as to the possibility of a boy well cultivated in classics making up afterwards for deficiency in the natural sciences. Would there not be a distinction between the sciences of observation and the sciences of experiment. Is it likely that a grown up person or a boy beyond a certain age would make up for neglect of the exercise of the faculty of observation?—I think not so well. If I am allowed to do so, I may mention my own experience in the matter. My greatest difficulty in the pursuit of systematic zoology and botany has arisen, I am quite satisfied, from the circumstance that I was not early trained in those sciences. I can recognise a flower or an animal when I see them, and I can remember their names. I have no difficulty as to verbal memory; but I have a difficulty in connecting the two things, the flower or the animal and the name; and I believe that if I had had an early training in the habit of systematic nomenclature, I should not have experienced that difficulty in later life.

105. Is it not to a certain extent the case with regard to the faculty of observation, as with regard to aptness for rapid calculation in arithmetic, that the habit should be acquired early?—Yes. I am very strongly of that opinion, and I know that it is very easily acquired under proper training. The late Professor Henslow studied the method of teaching natural science, I believe, as carefully as any one, and he was wonderfully successful in training that order of faculties.

106. As a member of the Council of the Royal Society, are you acquainted with some recommendations with regard to the introduction of the physical sciences as a study into public schools which were made by them?—I have before me the minutes of the Council of the 15th January 1857, containing the report of a Committee appointed to consider the question which had been brought before the Council, whether any measures could be adopted by the Government or Parliament that would improve the position of science or its cultivators in this country; and amongst various recommendations which were made were these two at the commencement—"1. The "Committee regard with much satisfaction the steps "already taken in the universities for advancing the "study of physical science by including several "branches of it in the public examinations, and "express their hope that the improvement thus "introduced may receive the extension which the "interests of science require, and that the public "schools may be thereby induced to make physical "science an integral part of their course of education. "2. The Committee recommend that the establishment of classes in metropolitan and provincial "schools, where those who have not the means or the "opportunity of studying at the universities may be "taught in the elements of physical science on a "systematic plan, be promoted by grants from Government in aid of such funds as may be locally "contributed for that purpose." These recommendations were adopted by the Council, and were forwarded to Government. The second has since been acted on by the Department of Science and Art.

107. (*Lord Clarendon.*) With reference to that recommendation I would ask whether you are not aware that at our great public schools the professed object is to train the mind?—Yes.

108. Some of them I believe consider that they adopt the best possible means for training the mind by the study of classics and mathematics?—Yes.

109. Is it the result of your experience that by the exclusion of the physical sciences, and of the methods of investigation employed in their study, that the mind does not receive as good a training as it might do?—I have been acquainted with several gentlemen who have passed with distinction through a course of public school and university training, and who have confessed to me with regret their inaptitude to understand any scientific subjects whatever,—their want not only of the knowledge but of the mental aptitude.

110. That is to say that you consider that the physical sciences and methods of investigation call forth different faculties of the mind from those which are developed by the studies of mathematics and classics?—Yes; I think so very decidedly.

111. And that therefore by neglecting the physical sciences those faculties lie dormant if they existed?—Yes.

112. (*Mr. Vaughan.*) I wish to understand a part of your evidence about which I am not quite clear, *i.e.*, whether you considered that the cultivation of language at the earlier period of life did not commonly cultivate the understanding, but only the verbal memory, or chiefly so?—I do not think it cultivates the higher mental faculties, because I think they are not in a state ready for cultivation at that period of life. There are various faculties which it does tend to cultivate, and to which I think it gives a very valuable training; but I do not think that the study of language can be insisted on, say from 10 to 12, as a means of intellectual discipline beyond a limited degree; and for that limited degree it seems to me that a comparatively small number of hours are quite sufficient. What I deprecate is the almost exclusive direction of the mind at that period to the study of language.

113. (*Mr. Twisleton.*) If your views are correct would there not be this advantage that in regard to a modern language the pronunciation could be learnt at a period when it could be learnt much better than afterwards?—Yes. It is quite certain that children learn the pronunciation of language as a speaking language much more readily than adults, and even more readily than young persons from 12 to 16. They are not afraid, they dash into it, they have no modesty to restrain them, no *mauvaise honte*. Every family that has been abroad knows perfectly well that its younger members come out in that way best.

The witness withdrew.

GENERAL EVIDENCE.

Sir Charles Lyell, F.R.S.

17 Nov. 1862.

SIR CHARLES LYELL, F.R.S., called in and examined.

1. (*Lord Clarendon.*) I believe, Sir Charles, you are the author of several works on geology ?—Yes.

2. Also of Travels in North America ?—Yes.

3. And you are a Fellow of the Royal Society ?—Yes.

4. I believe you took your degree at Oxford ?—Yes.

5. (*Mr. Twisleton.*) I believe you took honours at Oxford ?—Yes.

6. And you received a doctor's degree at Oxford six or seven years ago ?—Yes.

7. (*Lord Clarendon.*) As we know your attention has long been turned to this subject, I would beg to ask you, as the result of your observation and experience, what you considered to be the position of physical science and natural history in this country, as far as regards our educational system ?—I think it is hardly too strong a term to say that they have been ignored. There has been a move of late in the universities to restore them somewhat to that place which they formerly held at a time when the sciences were much less advanced, but when in proportion to what was then known they held a very fair position, and within the last 200 years I consider them to have been deprived of the proper position which they once held. The public schools being modelled in a great measure on the system of the universities, they have in like manner entirely neglected them, even in those schools where they are educated sometimes up to the age of 17 or 18. I think therefore that in that period of the progress of a nation when these branches of knowledge have been acquiring more and more importance, both theoretically and practically, that has been precisely the time when they have been more and more excluded from the teaching of the higher classes of this country.

8. To what would you attribute the neglect of these studies that has been shown at the schools in particular ?—I think that the schools being preparatory, in a great measure, to the universities, they frame their system in regard to those subjects which are to obtain the chief rewards, prizes, and honours at the university. Although a large proportion of the boys at our larger schools do not go to the universities (I do not know what proportion, but I know that it is very large,) nevertheless the system is planned as if they were all going there, and whatever be the plan adopted at the universities, and particularly whatever may be the matriculation, the entrance examination to the university, that will in no small degree govern what is taught in public schools if any branch of knowledge is entirely omitted. I am not speaking now of geology, of my own branch, or any particular one, but biological science, chemistry, natural history, geology, or mineralogy, are all so intimately connected that if the elements of any one are to a certain degree mastered, it will train the mind in the same way, and be the same exercise, and what I consider very useful training, and which to a certain extent the study of the classical languages and literature will not furnish. I am not at all advocating a very great number of these things being taught, in order that every public school should be the same, but if there is a representative of one or more of these branches that will in a great degree answer the purpose.

9. You consider that as there is no demand for physical sciences and natural history at the universities there is no attempt to supply them at the schools ?—Exactly; that is a great reason. However, it must not be forgotten that those schoolmasters are brought up in the universities without a knowledge of the sciences and natural history, and having no such knowledge, it is very natural that a great number of them should entertain some prejudice or think very slightingly of them. If the first, second, third, fourth, and fifth masters of a great school are all chosen out of that class, they have been in the habit of considering these subjects as of an inferior grade, and as not exercising the human mind to the same degree as the study of the Greek and Latin authors. Then I think there comes an additional difficulty, because these men are against the introduction, and to a certain extent not competent to teach these departments of study.

10. I suppose you consider that as the various branches of physics and natural history have developed and increased, the more restricted the systems both of the universities and of the schools have become, from there being fewer people competent to teach them ?—I do.

11. That they have fallen off from the time to which you referred just now when they did occupy a certain place both in schools and in universities ?—Quite so. I have endeavoured in a chapter that I wrote in my first travels in America, to show historically how it came about that the universities did not go on teaching these subjects. I think it is sometimes supposed that this depends in a great measure upon whether you teach by lectures or by a system like that of college tutors. I do not think that quite a fair way of viewing the subject. I do not think it is a question of whether you are to teach by public lectures or not. I think that it is more important than that. It is the question of whether, in a very large school, we will say that has a great many hundred pupils, you will divide the subjects amongst a great number of men who, having had a liberal education, have devoted their time chiefly to some branch, such as history, Greek, Latin, natural philosophy, chemistry, or geology. It is a question whether you will have the subjects divided to as great an extent as you can, and you may do that in large schools to a certain extent, though not so well as at the university. That is the question, in whatever manner you teach, whether you teach a small number in a room like this, or whether you have a large lecture room, still the question of subdivision of the subjects is in my opinion by far the most important towards efficient teaching; and it has so happened in our English universities, that what was the original plan of our academical system, as well as of all Europe, was entirely upset at the time of the Reformation, in consequence of the colleges—private corporations—usurping the powers and teaching of the university wholly revolutionising the system, and causing that in every one of these separate colleges there should only be two or three tutors, each of whom should teach almost everything, and who could not possibly subdivide the branches of human knowledge. Therefore I think they did quite right in giving up everything but the small number of subjects for which they were competent, for in most of these colleges they were obliged to take orders at a certain period. That I think has worked in the universities and in the schools and has made it far more difficult to introduce the elements of a greater number of studies than otherwise it would have been.

12. You would consider, then, that although the great majority of boys educated at our public schools do not go to the universities, yet the requirements of those who do go to the universities in fact regulate the system of the school ?—Quite so.

13. Therefore you would say that the majority do not have that education that you think would be best for them, and in fact are sacrificed to the minority who are proceeding to the universities ?—Yes.

14. (*Lord Lyttelton.*) Taking the particular schools which we have to deal with, Eton, Harrow, Westminster, Charterhouse, St. Paul's, Rugby, Merchant Taylors', Shrewsbury, and Winchester; are you prepared to say whether the majority in that body of schools go to the university or not ?—No, I am not quite prepared to say, but I feel confident that if you exclude those who are obliged to go because

they are going into the church that you will find it is quite a minority who go to the universities.

15. Or who intend to go, or who go there with a view to going to the universities?—I do not pretend to say.

16. You say "unless you exclude those who are "necessarily led to take orders." Do you think it is not so clear unless that is so?—Yes.

17. (*Lord Clarendon.*) I gather from what you said just now that you would be glad to see introduced into the matriculation examination, as a proof not only that they have been studied, but that some elementary knowledge has been acquired of the sciences to which you alluded, natural history, zoology, geology, and so on?—Yes, and chemistry and natural philosophy. I was speaking of the matriculation at the entrance to the university.

18. Not the University of London, but the Universities of Oxford and Cambridge?—Yes.

19. (*Mr. Thompson.*) That is the scheme adopted at the University of London (*handing same to the witness*). That would probably represent what you would wish to have introduced at the old universities?—Yes.

20. (*Lord Clarendon.*) You would not expect, I suppose, in the matriculation examination at the universities that the knowledge should be more than elementary?—Merely elementary.

21. As to the facts, not mathematical demonstrations?—Quite so. I think it is of immense importance that these subjects should be recognised, and however moderate, that there should be a beginning, because if they have not got through what may be called the grammar of these sciences, if they have not got through the first elementary difficulties, if they have not some idea, I should almost say some respect, for these things implanted at an early period, then they are at a great disadvantage in after life; even if they incline to those things, and even if it should happen to be the bent of their minds, as it is of some persons much more than others.

22. You would consider it a matter of national importance that in all the schools which Lord Lyttelton has just mentioned these studies should be recognised and some elementary knowledge of them required?—I should think it would be a very great improvement, without in the least disparaging the branches of literature which they now study. If I were framing it I should be satisfied with a very moderate amount, knowing the difficulty there is in introducing these things when once the system is what it has become.

23. You think that without some early examination, or some motive which would make it necessary to acquire these elements, a man would most likely remain ignorant of them all his life?—I am sure that is the case, and what is worse, that it very often prevents persons of rank and influence from undertaking these things, from following up these matters themselves, and from being enlightened patrons of, and giving a direction to these branches.

24. At all the public and private schools that you know of, physical science and natural history are altogether omitted, are they not?—Certainly.

25. Except such few instances as do not interfere with the general rule?—That is the case.

26. Of course the more you extend the range of these subjects the less you are entitled to ask at an examination?—Certainly.

27. With reference to what you were saying just now that the masters are generally clergymen who have been instructed for a particular profession, and have no knowledge of that which they have not learnt when young, would your opinion be that at the great schools there should be some one or two or three individuals all of whom should undertake the teaching of these sciences, or would you rely upon the classical and mathematical masters to acquire that sort of smattering of them that would be sufficient to enable boys to pass a matriculation examination?—I think it would be a very great improvement indeed if there were one or two who, while they were men of liberal education, would have devoted themselves principally to scientific subjects, because if you demanded German or French to be taught you would not expect that teacher to have the same amount of Greek and Latin that you would require in other masters, so I think it is still more necessary if you have a teacher to examine the boys in what they may have learnt at lectures or in any other way, that he should be a person who has acquired a moderate amount of classics, and a more profound knowledge of the science to which he may have principally devoted his life, more than would be possible for the ordinary masters who have been all their lives exclusively at Latin and Greek.

28. Have you ever turned your attention to what would be a convenient distribution of those sciences, such as natural philosophy or chemistry, either for the purposes of teaching at schools or for such a matriculation examination as you would contemplate as useful at the university?—No; I do not think I am quite prepared to give an opinion upon that.

29. Do you happen to be acquainted with the distribution of these subjects at the London University?—Yes.

(*Mr. Thompson.*) Allow me to call your attention to the programme of their examination (*handing it to the witness*).

(*Sir Charles Lyell.*) Is there not an omission entirely of zoology and botany?

(*Mr. Thompson.*) Yes, a deliberate omission.

(*Sir Charles Lyell.*) I cannot help thinking that, to however small an extent, there should be in addition one or other of those two branches, which belong to quite a different department. There are a great many persons who have a decided turn for those things, and there is a very false idea among those who have never been grounded in such branches, that they are comparatively trifling, and do not require the same searching mind, and the same severe study. Now of course you can only demand very little from boys who are examined in various languages, but suppose a boy, instead of many languages, substituted zoology or botany for one of them, I think a great deal of the same useful exercise of the mind might be derived from it. I think they ought not to be totally excluded from the system; there should be some one or other of them taught.

30. (*Lord Clarendon.*) Having considered, as you have, this omission of the physical sciences at our schools and universities as a question of national importance, and a matter of national regret, you must be aware that the excuse is always that there is not time, that the system now pursued at the schools, and afterwards at the universities, is very much devoted to the study of classics and precludes absolutely, from want of time, the study of these other and important sciences. Have you ever considered that question of time, and how these other studies could be joined to the classical studies without detriment to that which is considered to be the basis of our public school education?—Yes, I think that a great deal too much time is given to such things as writing Latin and Greek verses, and attempting even at school to acquire a degree of proficiency which would be very useful if a person specialised it afterwards, but which it is not desirable to require of young men before they are 18, and that a portion of that which they now acquire at the public schools should be left to be afterwards acquired at the universities at a later age, and that you should not at the expense of omitting these scientific subjects devote so very large a portion of time to the other departments.

31. At our public schools it is generally considered that the study of the classics is the best possible training for the mind, but would you consider that the mind does not get the best possible training if the study of the physical sciences is omitted, and would you consider that the study of physical science calls into operation and developes faculties of the mind that are not called into activity by classics or mathematics?

GENERAL EVIDENCE.

Sir Charles Lyell, F.R.S.

17 Nov. 1862.

—Yes, I do most decidedly; I think the reasoning powers and the judgment are more cultivated by these subjects than by the exclusive study of the classics.

32. Of classics and mathematics ?—Yes.

33. Pure mathematics?—Yes. I think mathematics applied often does that which pure mathematics will not do.

34. (*Lord Devon.*) Taking your view as to the great importance, not merely with a view to proficiency in any particular branch but with reference to the mental training generally, of incorporating physical science in the general education of British youth of the upper classes, at what period of school career should you consider it wise, safe, and most beneficial to the object in view to introduce that; would you postpone instruction in physical science until a groundwork was previously laid of classical literature, or would you concurrently, as it then must necessarily be, with a more limited degree of instruction in classical literature, give certain instruction in physical science to boys, say from 9 years old and upwards ?—Perhaps at 11 or 12 and upwards. One should consider first of all at what age a large number of them leave school, so that you should ensure the majority not leaving without having a foundation. When I had ascertained that, I should endeavour to take care that the age at which the majority left the school was not allowed to pass away without having broken ground, but I quite think that most probably the best way of beginning is the way they begin now, with the ancient languages.

35. It is sometimes said, and with great force, that the faculties of observation ripen, so to say, at an earlier period than the reasoning powers ?—Yes.

36. Do you think that that would or would not point to the conclusion that such sciences as botany and chemistry, perhaps, and so on, should be communicated at an earlier period ?—Yes, I have no children of my own, but I have nephews in whom I take as much interest, and I certainly have observed that the powers of observation and the interest of observing with accuracy are very early developed indeed, at 9 or 10, and they learn a vast deal of other things in consequence, if they can be taught any of these branches. I am sure they get on sometimes in Latin very much from the interest they take in the Latin names, for instance, of animals and plants. It sometimes helps memory in a way that is surprising.

37. You think that would be a great good, but on the whole you would prefer their beginning at an early period ?—Yes, indeed I should.

38. (*Lord Lyttelton.*) I understood you to say that these old established schools must have a peculiar difficulty in introducing the new studies and diminishing the old, because they *are* old schools and have an established system to deal with ?—Yes.

39. You are aware of the great number of new schools which have sprung up in England during the last few years, and which is increasing ?—Yes.

40. Does it appear to you that those schools, having no traditions whatever to affect them, no established system to break in upon, and depending absolutely for their existence on satisfying the demands of the public, have a great facility in introducing these new studies to any extent that may appear desirable, and that if so they may establish a very wholesome competition with the old schools, and to a great degree meet the necessity for the introduction of these new studies?—I think that the power and influence of fashion, and the imitation of the old established schools, is so very great that you are sure to have these proprietary schools modelled to a much greater extent than even the public would naturally wish in imitation of the older ones. If you could have a slight improvement in the old ones I think you would do more good. I have looked to these new establishments as calculated to work some reform; but I do not think that anything will have so great an effect on these very schools you speak of as a change or any slight modification of the system in the old schools.

41. Are you at all acquainted with the system of Wellington College ?—No.

42. You are not aware of the extent to which physical science, for instance, is introduced there ?—No, I remember hearing it spoken of by the late Prince Consort when it was being planned, but I have not had an opportunity of following it up.

43. (*Mr. Vaughan.*) Do you think that purely literary pursuits and the literature of the country generally would receive benefit by a degree of scientific education and instruction being given in the public schools and the universities in conjunction with a literary education ?—Indeed, I think it would. I think the literature would gain. I think the literary writings of a man like Hallam, for instance, who had taught himself science and natural history, are of a higher stamp than they would have been if he had not had that knowledge.

44. Do you think that from the increase of the cultivation of those branches of knowledge throughout Europe there is so much of that knowledge scattered through literary works now that a literary person is hardly able to understand the whole compass of literature without some scientific attainments ?—Yes, I think so. Perhaps I may be permitted to make a suggestion, it is rather a suggestion than anything I wish to give as evidence, but it is this. I know great alarm was manifested by the professors of science in the Scotch universities a few years ago, when the competitive system of examination was introduced. Several of them wrote to me to say, "You know very well that we have supplied a "want which has been caused by the ignoring in "England of scientific and biological branches of "knowledge, and now if this system of competitive "examination is founded, as it will be, on the notion "of university and public school men, they will be "sure to give such a number of marks to their "favourite branches that we shall no longer have any "except the medical students, who are forced to at-"tend the scientific department; they will come, but "we shall lose our other students. Suppose a man "wants to get into the Indian Civil Service, he "must then attend not to the things which we have "been teaching in Scotland, and which have been "supplemental to a certain extent to the wants "which the English university system has left "unsatisfied. Immediately we shall lose parts of our "class, and they will be obliged to devote themselves "to Latin and Greek, and those subjects which the "English have more exclusively studied." Now Mr. Twisleton is one of the examiners, and he will know more than I do whether these fears have been realized, but it appeared to me at the time to be a very serious danger, knowing how very useful a great portion of these men educated in Scotland have been in filling up places, colonial and otherwise, which we could not supply from the men brought up in our English public schools.

45. (*Mr. Thompson.*) You are now speaking of universities, not of schools?—Why I mention it is this, that at the Scotch colleges they correspond in age to a certain extent. At a place like St. Andrew's or Glasgow the ages of the men correspond with the last years at Eton and Winchester.

46. (*Lord Clarendon.*) 18 and 19?—About 16, 17, and 18.

47. (*Mr. Thompson.*) After getting a degree at St. Andrew's they come to Cambridge ?—Yes, very often. Therefore, if you have in any way modified by these late reforms—for I consider them great reforms—if the competitive examinations have in any degree forced the Scotch universities out of their old system, it is the more desirable to have some change.

48. (*Mr. Twisleton.*) Are you aware that under the present system of marks for competitive examinations in the East Indian Civil Service it is possible for a young man to obtain an appointment without

any knowledge of Latin or Greek whatever ?—I was not aware of that.

49. In your geological investigations in Germany have you become acquainted with many literary men there ?—Yes.

50. Among the class of literary men is there greater or less knowledge of the physical sciences than in England ?—There is decidedly more general knowledge even where there is no special knowledge. They understand a great deal more what we are about than the literary men and classical scholars of this country do.

51. Are you aware of the system of the German gymnasia ?—Yes, I have some idea of it.

52. Are you aware that a certain number of hours a week is set apart there for instruction in the physical sciences ?—Yes.

53. Are you disposed to attribute the greater knowledge of literary men in the physical sciences there to the instruction which they may have received in the schools ?—Certainly; I am sure that is the reason of it. There is generally in a moderate sized gymnasium a master appropriated to the teaching of these branches, and sometimes he has a considerable knowledge of the science, devoting himself in the holidays to some favorite branch, but obliged to get up a knowledge of a good many different ones, and to teach the elements to these boys. It is such a portion of the whole time as might easily be introduced into our schools. It has the most happy effect.

54. Are you aware that each gymnasium has usually a collection of natural history, and a collection of philosophical instruments ?—Certainly they have.

55. Have you ever had conversations with men in the small towns, who have information which you would not be likely to find in England ?—Quite so. I may mention Winchester as an instance, that I have practical experience of. I have been very much struck with it. If you were to go in Germany to a second-rate school, I mean a town of second-rate importance, and go to the gymnasium there, you would get information in scientific points that it would be quite in vain to look for in such a magnificently endowed establishment as Winchester. I remember one instance among others; I could mention several in Germany. I refer to Eisenach. I happened to stop there, and I found there was a teacher of natural philosophy and science, who had a collection belonging to the school, and there was a certain number of hours in the week devoted to it. The boys were exceedingly fond of it. Still it was a very limited number of hours in the week, and this man who had published, and has since published, some very good original papers on different branches, was very well acquainted with the different subjects which he was teaching. I heard him give a lesson in the school. There were the other masters who might correspond to our teachers of Latin and Greek in the school, but they found a place for a teacher exclusively of science.

56. (*Lord Clarendon.*) This was in the small town of Eisenach ?—Yes.

57. How many young men were there at this gymnasium ?—200 or 300.

58. Was he paid by the State, or was it by voluntary payment ?—I do not remember.

59. (*Sir S. Northcote.*) I should like to ask, generally, whether you consider that this superiority of education in these branches of knowledge which the Germans receive, produces a corresponding superiority in the educated classes of Germany over the educated classes of England ?—No; I think our political freedom is such an immense element that you really cannot compare the two cases. The higher classes in Germany are inferior on account of that in a great measure. We ought to be at the head of all the others, having so long enjoyed our political institutions. Among the literary men, I am quite sure there is the great advantage.

60. (*Mr. Twisleton.*) You are speaking of the classes that have attended the gymnasium ?—Yes.

61. (*Mr. Thompson.*) With regard to the clergy, have you seen anything of the clergy in Germany. Would you say that they were better acquainted with such subjects ?—Yes, indeed, I think they are. I think there is a great advantage in that respect in Germany. In fact, it was an observation of Baron Von Buch when he came over here, "in regard to "church matters, or the connexion of science and "religion, you are as much behind us in freedom as "you are ahead of us in your political institutions," and I attribute that in some measure to there being a better general notion of science among the clergy. However, I cannot speak so well of the clergy as I can of literary men. I am sure that a purely literary man, and we know that there are very distinguished literary men in Germany, would have a notion very generally of what scientific men are doing, and the elements of it, which they have not in this country.

62. (*Mr. Twisleton.*) Is it the case that in some practical departments of knowledge, say in your own, there is a difficulty in obtaining the assistance of educated men for important practical purposes ?—Yes; until the formation of the school of mines in Jermyn Street, which is quite a new establishment, it is extraordinary the difficulty that there was. If they sent over from the colonies for some one to make a geological survey, or to examine into the mines, or if a man like Lord Breadalbane offered to give 700*l.* or 800*l.* a year for anyone who would survey his estate, there was no well-educated man to be found in England; our only chance in that case was Scotland; although the mining wealth of this country is very superior to that of any other, or almost to all the others put together, such was the neglect of scientific education in that sense that we had sometimes to send over to Germany to supply a surveyor.

63. (*Lord Lyttelton.*) What class of person would it be who would undertake that sort of survey, would he be of the class of what we call "gentry" ?—In Germany you would have a very great chance of that, because of the manner in which the mining department is cultivated there by the gentry. I might mention men like Count Brenner in Austria, and the late Count Beust in Prussia, both of them men of fortune, devoted to it, and like miners regularly working at it, and considering it an honourable profession.

64. (*Sir S. Northcote.*) How long ago was that which you mention with regard to Lord Breadalbane ?—I should think 10 or 12 years ago, before Jermyn Street came into full play.

65. But is it not the case that since 1851 a very great advance has been made in the provision of facilities for instruction in practical science and in other branches of knowledge of that kind—as for instance, in the department of practical science at South Kensington—and at the institution in Jermyn Street itself, and what has been done in both ways has surely very much advanced those facilities ?—No doubt it has, but it has not yet told much upon the general education.

66. Do you consider that the public schools of England (what we generally mean by public schools), are places in which instruction should be given for such work as that of which you have been speaking ?—No, not practically, I do not think so, but I think that you would have a greater number of well-educated men who would go into these departments if the elements of science were not wholly neglected at the great schools; I think that the mining in Germany, for instance, has been more scientific and better in consequence of those who pursue it being recruited from such classes as would go into our public schools; that instead of drafting from an inferior class whose parents have not been able to give them so good an education, you would naturally, if there was a better system, draw from those who had a taste in such matters, and from a higher class who had had a liberal education in public schools.

67. Which would you like best to see in public schools, a system of teaching both literature and physical science carried throughout the school and made

GENERAL EVIDENCE.

Sir Charles Lyell, F.R.S.

17 Nov. 1862.

universal, or a system of what is known abroad by the term of "bifurcation," by which I understand it is meant that when boys come to a certain point they should choose whether they would pursue the literary or the scientific branches of education?—At what age is that? (*Mr. Twisleton.*) They leave at 18.

68. (*Sir S. Northcote.*) 15 or 16 I think, say 16?—I have not fully considered that point. At the same time, having thought over the very great range of subjects, and the very different turn of boys' minds, and the different aptitudes they have by nature, I have always been in favour of their being allowed to select as soon as possible after you have once secured the general groundwork.

69. (*Lord Lyttelton.*) That is the principle of it. Do you know from what schools the Jermyn Street institution is recruited?—I do not think there are many that come from the great public schools, hardly any.

70. Do you know what schools they do come from?—I do not.

71. (*Mr. Twisleton.*) Supposing in the public schools with the present classical instruction there was an initiation of boys in the physical sciences, is it not likely that some at the university would aim at honours in the physical sciences?—Certainly, and much more now that at the University of Oxford they have allowed men to go up for honours in the physical sciences. That has been one of the effects, I believe, of the University commission, but the want of training at schools prevents its telling as much as it might have done.

72. You are aware that there are some scholarships and some fellowships set apart for the physical sciences at Oxford are you not?—Yes.

73. Would it not be likely, if boys received some instruction at school, that some of them would compete for those scholarships and fellowships?—Certainly.

74. And then if in that way they attained prizes and honours at Oxford, is it not likely that they would be very willing to compete for some of these offices you have mentioned?—Certainly.

75. They would be fit for geological surveyors certainly, and they would also be fit masters?—Yes.

76. So that in fact one of the best modes of laying the foundation for having hereafter good masters in these sciences in public schools would be to introduce the study of them now?—Certainly.

77. (*Mr. Vaughan.*) Have you any means of knowing whether in the middle classes there is a greater knowledge on these subjects at present than in the upper classes?—It is a very remarkable fact that if a scientific book is published it depends more for its sale on the middle classes of the manufacturing districts than on the rich country gentlemen and clergy of the agricultural parts of the country, and, therefore, if there is a distress like the present in Lancashire, the publisher would say "Do not bring out your book now."

78. In a political point of view, is not that not only an unhealthy but also a dangerous state of things in some respects, that the material world should be very much better known by the middle classes of society than by the upper classes?—Certainly, and I think it is particularly so in reference to the teaching in this country by the clergy, and a vast proportion of the university men are going into the church. In order to bring their knowledge more into unison with that of the artizans, it is particularly desirable that a certain portion of science should be taught. Medical men would of course be required to know some science, natural history, comparative anatomy, or something equivalent, but they would say it is not necessary for the clergy. I think it particularly desirable that the clergy should have some initiation into these things.

79. Does not the absence of knowledge in these branches of learning tend to disturb the relation which the social position of the two would in itself rather tend to produce, and the respect of the middle classes for the upper classes?—Yes, I think it must, but I do not feel very strongly on that question, because the aristocracy of this country, in spite of the system of education being somewhat narrow, get their education in other ways, and, therefore, they are greatly respected; but I think the clergy would be particularly benefited by any change you could make by introducing these things into public schools. I feel that there is a dangerous want of sympathy at present between the better informed working class of the manufacturing districts and the clergy.

80. I do not by any means ask whether they do not generally on many accounts meet with respect, but whether the absence of that knowledge on the part of the upper classes which the middle classes appreciate and possess does not tend to diminish the respect so far?—Certainly, so far.

81. And whether it does not also tend to put a certain amount of power into the hands of the middle classes, which the upper classes have not?—Yes, I think so.

82. (*Sir S. Northcote.*) But if the upper classes, in acquiring a greater amount of this knowledge of the physical world were to lose any of their literary and intellectual superiority, might they not thereby endanger their pre-eminence as much in the one way as they would gain in the other?—In answer to that question I think I could say from my own experience, that in consequence of narrowing the number of subjects taught, a large portion of those who have not a particular aptitude for literary pursuits, but who would have shown a strong taste for the sciences, are forced into one line, and after they leave their college they neglect branches they have been taught, and so cultivate neither the one nor the other. I have known men quite late in life, who have forgotten all the Latin and Greek which they spent their early years in acquiring, hit upon geology or some other branch, and all at once their energies have been awakened, and you have been astonished to see how they came out. They would have taken that line long before, and done good work in it, had they been taught the elements of it at school.

83. (*Mr. Twisleton.*) So that there was a mental waste in their youth?—Quite so.

84. (*Sir S. Northcote.*) That is a separate question, no doubt, and one of very great interest and importance; but when I asked you just now whether you considered that the result of the superior physical teaching in Germany was to produce a superior educated class, you replied no, and you referred to the political condition of the country. I did not follow up the question, but I might follow it up by asking, do not you consider there is any connexion between the system of education in a country, and its political condition; and do not you consider that a well conducted system of literary education has a tendency to produce political freedom?—You naturally would suppose that if there was any difference in the system of teaching in England from that of the continent or of Scotland, it was owing to the difference in the political institutions, but in fact it is due to accident. We are governed in a great measure by Archbishop Laud, who altered and remodelled the statutes of both the Universities after the Revolution; and besides this, the universities, instead of being gradually modified and improved as they would have been in a country like this with our political institutions, were broken up into a set of corporations, and the whole system by that means entirely altered, both in regard to the impossibility of distributing the different branches of knowledge among different teachers, and also by throwing the whole monopoly into the hands of the clergy. In spite of all that, the institutions of the country have triumphed over these drawbacks.

85. You think our political freedom arose rather in spite of our system of education than in consequence of it?—Yes; I think it is independent of it; it has had nothing to do with those checks that have narrowed our system of education.

86. (*Mr. Thompson.*) You would allow, I suppose,

that the great amount of time that the English gentlemen used to give to the study of Greek and Roman literature and history may have had some effect in liberalising their views in political matters. Is it not the fact that in the last and preceding century the Greek and Roman writers had a great influence on the political opinions prevalent in the higher classes. Is it not a matter of history that that was the case?—I do not know whether that was the origin of it.

87. Is it not the case that absolute governments encourage physical science in preference to moral?—No, I think not.

88. I think the Austrians do so?—Metternich was very fond of it, certainly, but I do not think that absolutism can have any such tendency. The spirit of inquiry and investigation is so exactly opposed to the dogmatic system, which you can reconcile with the teaching of the old classics, but the moment you begin to teach the physical sciences they are entirely hostile to the dogmatic system. They harmonize perfectly well with a liberal constitution, and are exceedingly opposed to absolute governments. That is rather the tone of scientific men, and they are thought rather a dangerous class in consequence. They could not be dangerous in a country like this, but I think they are in countries having absolute governments.

89. Are the purely scientific men thought dangerous?—I am inclined to suspect they are so.

90. Are not the literary professors more dangerous?—I do not think they are really dangerous in a proper sense.

91. No, but I mean in the opinion of the governments?—Yes, I think so.

92. A great proportion of the seven professors of Hanover were literary men, I think?—In Hanover some of the most eminent scientific men were expelled from the university.

93. They were seven in number, and among the seven were Ewald the Orientalist, the philologers James and W. Grimm, Gervinus the critic, and Dahlmann the historian?—Yes.

94. (*Mr. Twisleton.*) If a professor were taken notice of for opinions uttered in his lecture room he would almost of necessity be a literary or theological professor?—Yes.

95. A scientific professor would not have many opportunities, unless he went out of his department, for expressing his political opinions in public?—Yes, political economy and history would oftener come into collision with the opinions of ruling men than natural history and physical science.

96. (*Sir S. Northcote.*) Do you remember any instances in Napoleon's reform of the Academy. I do not remember it very perfectly, but my impression is that he put down the literary men, and discouraged everything but what was scientific, because he found the literary men dangerous to his government?—Yes, they would come more into immediate contact and antagonism with his maxims of government; but the political reformers whom he would have to fear would be quite as much those who had been educated in science.

Victoria Street, Tuesday, 18th November 1862.

PRESENT:

Earl of Clarendon.	Hon. Edward Twisleton.
Earl of Devon.	Rev. W. H. Thompson.
Lord Lyttelton.	H. Halford Vaughan, Esq.
Sir Stafford Northcote.	

The EARL OF CLARENDON in the Chair.

Michael Faraday, Esq., F.R.S., called in and examined.

1. (*Lord Clarendon.*) I believe you were at one time Instructor for the Government at Woolwich, were you not?—I was.

2. For how long?—For 20 years. I was Professor of Chemistry there, or Lecturer on Chemistry, I should rather say, because the Professorship passed away with McCulloch, and was not renewed until I left. I am also one of the Senate of the London University; one of the original nominees.

3. I believe you have been in the habit of lecturing at the Royal Institution?—I have.

4. For many years?—For a good many years. I cannot tell how many.

5. And you have also been in the habit of giving juvenile lectures?—I have.

6. Will you have the goodness to give us your opinion, as the result of your observation and experience, upon the state of knowledge of the physical sciences and natural history in this country, with reference to our educational system?—I can give you my impression as far as that is permissible, independent of any comparison between that part of knowledge and other branches. I am not an educated man, according to the usual phraseology, and, therefore, can make no comparison between languages and natural knowledge, except as regards the utility of language in conveying thoughts; but that the natural knowledge which has been given to the world in such abundance during the last 50 years, I may say, should remain untouched, and that no sufficient attempt should be made to convey it to the young mind growing up and obtaining its first views of these things, is to me a matter so strange, that I find it difficult to understand. Though I think I see the opposition breaking away, it is yet a very hard one to overcome. That it ought to be overcome, I have not the least doubt in the world.

7. But you consider that those studies have been almost entirely overlooked?—As far as regards education, almost entirely. I do not speak down to the present time, because I see amendment gradually coming. There are good men, strong-minded men, willing men, who endeavour to advance the education concerning these things.

8. You are speaking as far as your knowledge goes of all our great schools?—Yes; I am mainly speaking now of that knowledge which comes to me from the consideration of the question at the University of London, where I have had occasion to think of it for some years past in connexion with the endeavours of that body for the encouragement of the natural and the physical sciences.

9. Have you ever had occasion to inquire, or have you formed to yourself any opinion as to why these studies should have been so neglected at our schools?—As far as I can see it is only a matter of habit and of prejudice, derived, and which must be derived as things progress, from pre-existing conditions. The present mode of instruction in literature has been established for ages; and the other know-

GENERAL EVIDENCE.

Michael Faraday, Esq., F.R.S.

18 Nov. 1862.

ledge, which is not altogether new knowledge, but of which the immense body is new, and most of the applications of which are new, has not yet had time, to make itself familiar and become appreciated,—I do not say there is any dislike to seeing its progress,—but I do not think it has had time to make its way.

10. But from those causes, you consider that science has been shut out of our public schools?—I do; or rather, as that implies an active exertion, I would say it has not yet been received kindly into our public schools.

11. You think it is now knocking at the door, and there is a prospect of the door being opened?—Yes; and it will make its way, or we shall stand behind other nations in our mode of education.

12. What evidence have you seen of the necessity of these studies being recognized?—We have it manifested in the practical results when men of ordinary intelligence, as the law phrase goes, are required in the uses and applications of life. We have it continually in our lighthouse arrangements. I am an officer of the Trinity House, and have occasion to see there how difficult it is to get men of ordinary intelligence prepared by instruction with regard to anything that is out of the very ordinary way. In the mere attendance on a common lamp, and the observance of the proceedings required for its security, or the attempt to make notes of what they ought to observe, of which they have tables drawn with much care, a great degree of, I will not say opposition, but of ignorance, is continually manifested. We cannot find even slightly instructed men. We cannot find the intelligent common man. I have had occasion to go over to France with a Trinity deputation to look at their lighthouses, and we find intelligent men there such as we cannot get here. In regard to the electric light which you may have heard of, we have had to displace keeper after keeper for the purpose of obtaining such as could attend to it intelligently, and who could do what they were bidden.

13. Of what class of men are these?—The ordinary workman; the keeper that has probably, I will say 25*s.* a week, and a house and firing given him; the fair and ordinary workman, such as in France, we find with far less pay. At the lighthouses there we find intelligent men able to give a reason, able to supply a correction, or to act for themselves if they see action is wanted.

14. Then your opinion is founded on facts, as to the ignorance and want of intelligence of this class of men, who are rather of what are called the lower orders, but in what way would you connect that with the want of the study of physical science at our principal schools, and more particularly with that germ of improvement which you think you now discover?—I am not so much speaking of what the schools are to do or have done, as of the state in which I find the minds of those who have come near me and about me, whether they be officers in the army—as when I was at Woolwich, for instance—or whether they be such as come to the ordinary lectures of the Royal Institution, or especially that particular class who are brought by the sound of juvenile lectures. I have found such deficiencies in the classes that came, as a matter of course, and because they were obliged to come, as at Woolwich, that they were very often altogether, or nearly, unable to give an answer to the questions which I asked of them. The slightest possible examinations that I could ever give, in order to obtain some kind of answer, were very feeble and poor; nor can I wonder at that, because they had no instruction but my lectures. I spoke for an hour twenty-five times or thirty times in the course of the year. They heard nothing but that, and that, though it was acknowledged to be the best means we had at that time of giving them an idea of chemistry, could really not give them much of an idea.

15. Your description would lead to the inference that it was from no want of natural intelligence, but rather from a want of a proper direction of their faculties to these particular studies?—I am not inclined to charge as a want of natural intelligence that which is a consequence of a want of prior information, and of the habit of having that instruction. A child knows he must learn his alphabet, and he learns it; but if he did not know it, and had not to learn it, it is probable that he would not.

16. When you say you have discovered, unquestionably, a superior amount of intelligence in the Frenchman of the same class, and who was set to do the same work that the Englishman fails in, could you trace that that man had had any instruction; or do you think he was more naturally intelligent than his *semblable* in England?—That I cannot say. The men in France had intelligence, and on speaking with their superiors we found they were drawn and selected from a class that had had instruction, government instruction mainly, but I cannot say that they were any better in intelligence. Again, I will say that my experience of old times—for it is old times, towards half a century ago—my experience in courts of law, amongst witnesses, and men brought up there, was to find a great deficiency in the power of giving a reason why. I had occasion, at one time, to give a lecture. I was pressed, and I gave one lecture amongst six, on education. It was printed, and I have brought it in my pocket, but I do not think I need trouble you with it; all I had to say or to think in that lecture was, just to put before my audience the ignorance in which, generally speaking, parties were who came to me even there, and their *want of judgment.*

17. What class of persons were they?—All: any who chose to come. In respect of natural things I trace everything to the ignorance of the learned in literature as often as the unlearned, and to their *want of judgment* in natural things. I tore this lecture out of a book this morning. It shows the ignorance and want of judgment in natural things which exists, where often there is a fine intellect in other things, from the want of that training which a simple education would give them (*Mr. Faraday hands the book to the Commissioners*).

18. Where was that lecture delivered?—At the Royal Institution, before Prince Albert (A.D. 1855.)

19. You said you began to see some germ of improvement. Do you think that that improvement has been sufficiently developed to warrant you, if you were going to lecture now to a mixed audience in London, in addressing them in different terms from what you did then, say 10 or 12 years ago?—As to sense?

20. Yes?—No. Every word I have said there I hold to still. I think I see since that time strong desires on the part of educated men, men like ourselves, directing the course of events, to spread that education, and though perhaps only in a small degree, not to ignore it altogether.

21. As far as you have had opportunities of observing, should you say that that desire existed in the public schools?—I know very little of the public schools. I never went to them myself, and know very little of their practice, and I should be afraid to say.

22. You have not heard, whether by public schools or proprietary schools, that any inquiries made with respect to men of science who could give instruction at those schools?—I am often asked what men to recommend to spread a knowledge of natural physical things. I cannot recommend such men; such men hardly exist at present. They want the A B C of science, and not the X Y Z; they want the first elements. If I give a juvenile lecture I lecture in as plain terms as I can to children, and I simplify as far as I can the ideas, but men are not educated to do that as yet. The ordinary schoolmaster does not know how.

23. In fact there is no demand for this sort of men, and nobody is being educated for that kind of employment?—I will not say there is nobody, because

I think there are many men about town who perceive the benefit of it, and would introduce it if they could only see their way clear in respect of the education already required. Life is so brief, and the time is so short which a pupil has who matriculates at the University of London, that really I do not know how to insist upon any desire that they should be taught physical science only at the very outset, because to pass a simple examination merely, is almost worse than nothing.

24. You would desire them to have an elementary knowledge, that is to say, of facts, not mathematical demonstrations; that I think is what is aimed at at the London University?—I must not shut out mathematics; mathematics, as it seems to me, is the only part of actual knowledge which the general system of education at present takes in. It is the one thing in which the literary man touches and applies science, and the only thing, until he admits physical knowledge, until he admits that knowledge of mechanics, of chemical action, of the earth, of the air, of the water,—I do not mind what words they are given in—which constitutes natural science.

25. (*Lord Lyttelton.*) Is not mechanics a part of mathematical teaching?—Mechanics are excepted, I think; but then that is a part of mathematics.

26. I thought you distinguished them from mathematics?—No. There are several ways of learning mechanics. I have known men who have learnt mechanics mathematically who could make no useful judgment at the sight of a machine. It does not follow that a mathematician can move out of his abstractions into the illustrations. The sciences I speak of are all of them sciences most valuable in their application. They make up life. They make up our artificial state. They make up the body of physical science, and are to us most important in life. I was very much struck at our senate to hear such men as James Walker, the engineer, and Arnot, and others, saying how much time they had lost in the course of their past life in pursuing a literary education, Latin and Greek, which they never found the least use for afterwards to any purposes of life.

27. (*Lord Clarendon.*) You probably are aware that what our great public schools profess and aim at most is to give a good training to the mind, and it is there considered, perhaps, as you were saying just now, from habit and from prestige, that that is effectually done by the study of the classics and of pure mathematics, and that in that way they furnish the best training of the mind that can be given. Now I would ask you whether you think, supposing the training of the mind is the object of the public schools, that that system of training the mind is complete which excludes physical science; whether the study of physical science would call into activity faculties of the mind that are not so developed by studies confined to classics and mathematics?—The phrase "training of the mind" has to me a very indefinite meaning. I would like a profound scholar to indicate to me what he understands by the training of the mind; in a literary sense, including mathematics. What is their effect on the mind? What is the kind of result that is called the training of the mind? or what does the mind learn by that training? It learns things I have no doubt. By the very act of study it learns to be attentive, to be persevering, to be logical according to the word logic. But does it learn that training of the mind which enables a man to give a reason in natural things for an effect which happens from certain causes; or why in any emergency or event he does or should do this, that, or the other? It does not suggest the least thing in these matters. It is the highly educated man that we find coming to us again and again, and asking the most simple question in chemistry or mechanics; and when we speak of such things as the conservation of force, the permanency of matter, and the unchangeability of the laws of nature, they are far from comprehending them, though they have relation to us in every action of our lives. Many of these instructed persons are as far from having the power of judging of these things as if their minds had never been trained.

28. You would not consider that the minds of such men as you allude to, who have been highly trained and who have great literary proficiency, are in a state readily to receive such information as they are deficient in?—I find them greatly deficient; not in their own studies or in their applications of them, but when taken out of that into natural sciences. Ask what is the reason of this or of that? they have a difficulty in giving the reason. If they are called upon to judge in a case of natural science, they find it difficult to give a judgment; they have not studied it.

29. You do not find any peculiar aptitude in those minds for grasping a new subject?—I do not. Take those minds and apply them to the special subjects which they have never touched upon or known of, and they have to go to the beginning just as the juvenile does. They are no more ready. The young mind, as I find it, formed by habits, forced this way or that way, is very observant and asks most acute questions. I do not find that mind, generally speaking, backwards to understand the statement I make to him in simple language, and if I tell him this or that, if I tell him that the atmosphere is compounded of oxygen, nitrogen, and so on, and then shape it into a question, he can generally answer me. I must confess to you that I find the grown up mind coming back to me with the same questions over and over again. They ask what is water composed of; though I have told the same persons a dozen years in succession that it is composed of oxygen and hydrogen. Their minds are not prepared to receive or to embody these notions, and that is where you want education; to teach them the A B C of these things.

30. You think that exclusive attention to one set of studies during early life rather precludes the ready adoption of these ideas?—Yes. It does not blunt the mind—I do not think it does—but it so far gives the growing mind a certain habit, a certain desire and willingness to accept general ideas of a literary kind, and to say all the rest is nonsense and belongs to the artizan, that it is not prepared to accept and does not accept the other and greater knowledge.

31. So that the mind runs in a particular groove from which it does not extract itself easily?—Yes; by that degree of habit the mind, I do think, is really injured for the reception of other knowledge. It takes up the impression that a certain kind of knowledge, what I call the real knowledge—the knowledge of things—is of no importance. I might illustrate it by saying that almost until lately the knowledge of how to be able to write legibly has not been attended to, but has been neglected and put behind the knowledge in other things. Who are the men whose powers are really developed? Who are they who have made the electric telegraph, the steam engine, and the railroad? Are they the men who have been taught Latin and Greek? Were the Stephensons such? These men had that knowledge which habitually has been neglected and pushed down below. It has only been those who having had a special inclination for this kind of knowledge have forced themselves out of that ignorance by an education and into a life of their own.

32. Supposing you were able to effect the changes you would like to see wrought in our system of education, how would you set about it?—I find it very difficult to make up my mind upon that matter. I do not know how. It wants a good man of business, a man educated up by method, and with a knowledge of all things that are needful in a good education. It wants such a man to divide the course, so that each mind presented to you should have its own way.

33. You would not be afraid of a multiplicity of subjects effacing each other?—I find that a great trouble. At the senate of the University of London, with my own approbation to a large degree, we begin by giving a knowledge of all things generally in the

GENERAL EVIDENCE.

Michael Faraday, Esq., F.R.S.

18 Nov. 1862.

matriculation examination, and as soon as possible we divide off the pursuits of each individual, that they may separate into literary men, and into physical men, and into medical men, and so forth, that each may get his own kind of knowledge supplied for him in future.

34. That would only begin at about the age of 17 or 18, I suppose?—I forget the age. I think they come at 16.

35. (*Lord Devon.*) It says in the programme, "no "candidate shall be admitted to the matriculation un- "less he have produced a certificate showing that he "has completed his 16th year?"—Yes, and then he has to undergo examinations. I think he has to undergo an examination which shows what has been supplied to him by his tutors before that time.

36. He undergoes a very careful examination?—Yes, the knowledge of which has an influence on the public schools before they send him to us.

37. (*Lord Clarendon.*) It is only elementary knowledge that is required. I think we had it yesterday that it was facts?— And yet even in that point of view we are under great difficulty, at least I am, for the queries go for more or less, sometimes for almost nothing. An examiner upon the subject of chemistry, for instance, may expect a simple answer, or he may require such a response as will go far beyond what I should ask for in a young mind.

38. I suppose what you would like to see established is a matriculation examination in science at the universities that should compel the schools to attend to those studies?—Yes, I think that is done here.

39. It is done at the London University, and I apprehend that any young man coming to the London University must prepare himself for that, and the school from which he is coming to the London University must not neglect these subjects?—Yes; and I find they do prepare themselves enough to satisfy us.

40. As to our other great public schools, which I believe do not send a great many to the London University, students coming principally from proprietary schools; would you see any objection, or would you advise that the study of physical science should be begun very early. My reason for asking that question is that the time is always pleaded as being insufficient. Supposing, as some persons think it should be, that the study of the classics was postponed till a boy was 12 or 13 years old, would you have the years preceding that in any way devoted to physical science. Do you think that boys would be too young?—I do not think they would be too young with proper teaching. Do not let a man go to teach who is a pedant in his science, and delights in abstract terms; or, before they have learnt mathematics, describes in mathematical formula the science he has to communicate. You want men who can teach, and that class has to be created. Without such channels the stream of knowledge is cut off from the young mind. I have no doubt that you will find such exceedingly hard to obtain, because up to this time habit and prejudice has not been for such men, and teachers have not even learnt by practice what they ought to learn and could learn even in that way.

41. There would be no chance of obtaining them till there is a demand?—No. The demand and the supply must go together. I do not know any other way of obtaining the desired end than to honour and encourage natural knowledge, gradually to introduce it into the general system of education, and whilst so doing to create, in the manner progressive experience may decide, a willing and competent set of teachers. To develop and establish, in fact, an experimental mode of advancing knowledge.

42. (*Lord Devon.*) I think I understood your observations to refer rather to the want of a knowledge of the facts than to the question of the comparative development of the reasoning powers by physical science or classical instruction?—All the operations which come under natural knowledge (I am speaking not of natural history merely, but natural applications, chemistry, mechanics, physics, and such matters) are performed or brought about by bodies which, when they present the fact, present actions dependent upon laws. I am incompetent to compare the training power of classical with physical instruction, because I have never been brought through a course of scholastic education; but it appears to me that nothing is so competent to make a young mind think, and think correctly, as the action of those laws. It supplies the facts, the knowledge of which is very needful, but which, if learned merely as a matter of rote, are comparatively of very little value. It supplies also the deepest yet the surest considerations regarding the certainty of the laws; their value in guiding; their faithfulness when trusted; and their certainty in application.

43. Supposing the one main object of education to be to train the mind, to ascertain the sequence of a particular conclusion from certain premises, to detect a fallacy, to correct undue generalization, or generally to prevent the growth of mistakes in reasoning, should you consider physical science is as valuable for that object as classical instruction is?—I do not see clearly how classical studies do educate the mind for that kind of judgment; but as regards the exercise of the judgment on the laws of matter, it is to me the most fertile source of the exercise of that judgment, and the true logic of facts, which I can conceive of, and which enables the man, when he has the facts in his hand, to apply them in every form and shape.

44. And that sort of training you would consider very valuable for the general purposes of life?—That is the sort of training to which the whole of my lecture was directed,* for I thought I saw a most lamentable deficiency, even in the highly educated men, of that kind of logic.

45. Without instituting any comparison, you think, that independently of the advantage gained from the knowledge of facts, the actual benefit derived from the study of physical science would be very valuable?—I think very valuable indeed, not merely as regards its own applications, but as regards the general judgment of the man.

46. I understand you to say, that you do not feel in a position to define exactly at what age it might be desirable to introduce the physical sciences?—I think one can hardly tell that until after experience for some few years.

47. Or whether you would introduce it at an early age concurrently with classical instruction?—I would not undertake to say. All I can say is this, that at my juvenile lectures at Christmas times I have never found a child too young to understand intelligently what I told him; they came to me afterwards with questions which proved their capability.

48. Will you let me ask you this question. Applying your experience to public schools, and supposing you have 100 boys to deal with at, say, Eton, would you have them learn the same course of physical science, or would you let one take geology, another zoology, and another chemistry?—There are certain things which are fundamental, which are like the A B C of the alphabet; for instance, mechanics, hydrostatics, a little pneumatics, and a little chemistry—all of which are things that a gentleman cannot do without.

49. That brings me to ask you this question, speaking of physical science generally; I think it will be valuable to us if you will mention the particular sciences which you think most important for early introduction?—The branches pass so thoroughly one into the other, that the body of knowledge, after all, is but one, and although we can make some distinction amongst those dependent mainly upon observation, as mineralogy, botany, and natural history generally, still, I never can make out the distinction between chemistry and physics.

50. If you take a little boy of ordinary intelligence, 11 years old, at Eton, and, say, half his time is devoted to classics and the other half to any branch

* Lecture on Education.

of physical science, what would you teach him?—I would teach him all those things that come before classics in the programme of the London University, mechanics, hydrostatics, hydraulics, pneumatics, acoustics, and optics. They are very simple, and easily understood when they are looked at with attention by both man and boy. With a candle, a lamp, and a lens or two, an intelligent instructor might teach optics in a very short time, and so with chemistry. I should desire all these. There might be a door by which you could leave out those for which they were inapt.

51. (*Mr. Twisleton.*) You would not be frightened by the hard words?—I do object very much to the too frequent use of hard words or technical phrases either in chemistry or in other subjects. The hard words are not the things. But the result will depend more on the men who are the teachers than on the wording itself. Education should not be stopped by that.

52. (*Lord Devon.*) I understood you to say that you thought the results not very complete or satisfactory of instruction merely given by a professor without the power of following up the members of his class afterwards; I suppose that would point to this conclusion, that besides the delivery periodically and at frequent intervals of lectures on those subjects, it would be of importance to have somebody attached to the institution, of whom the boys could ask questions who could relieve them from any difficulties they might be in, and from time to time, perhaps much more frequently than the delivery of the lecture, could give them certain instruction?—I think such provision would be very important and a most valuable aid to education.

53. You would not, probably, attach much importance to the delivery of four lectures, say, in the quarter of a year, at a public school; you would not think the boys would profit much by that?—Lectures depend entirely for their value upon the manner in which they are given. It is not the matter, it is not the subject, so much as the man; but if he is not competent, and does not feel that there is a need of competency, to convey his ideas gently and quietly and simply to the young mind, he simply throws up obstacles and will be found using words which they will not comprehend.

54. But with however successful and competent a lecturer, would it not be desirable that there should be some more frequent opportunity for a boy's applying himself to the study than the mere occasional delivery of lectures?—Certainly. I think that the referee you spoke of would be the one who would solve all these young doubts, and an ordinarily instructed man would be able to go so far as that. It does not want much mind, but there are not as yet the men. Teachers have never recognized its value, and such teaching has gone for nothing in the schools. It obtains few or no marks, and therefore its value is lost. We cannot and ought not to deny the power of what may be called low reasons in the marks that are given; they have more influence in the progress of the boys than is thought. I know schools where there are certain studies which are very useful and even ornamental, yet which obtain no marks. I am speaking now away from my own matters. Drawing may be quoted as one. A lad, who may afterwards become an officer, a traveller, or an observer of any kind, being in a school of that sort, would not take up drawing, there is no sufficient inducement.

55. (*Lord Lyttelton.*) When you say that you have not been able to understand in what way classical instruction trains the mind, you are aware that many, perhaps most, of the defenders of classical education defend it on this ground, not that it teaches certain things, nor that the classics as classics have any peculiar value, but that through the classics best the laws of language and the structure of language is studied, and that it is the study of the laws of language which is held best to develop and strengthen the mental faculties?—That is narrowing the question this way, that in place of saying you are taking the classics you take the laws of language, and no doubt they give that education, at least as far as I can see. I am reasoning in the dark, because I have not had the opportunity, and have not the right to speak of these things. I confess all that. But although it be a very important thing to know language perfectly, and to know its laws, or to carry it out as the most profound scholar would do by tracing all languages to an original one, or what not,—Max Müller or anybody else,—that is not all knowledge. I am not attacking the classics at all; I am only putting in a plea for that other knowledge which belongs to our absolute nature, and, in fact, which language only helps to describe.

56. What is held, I believe, by the defenders of classical literature is, that the study of language strengthens the general powers of the mind in its application to any other subjects whatever which may come before it, and that in that way the mind is best strengthened as an instrument for acquiring any other kind of knowledge whatever. I wished to ask whether you have considered it in that point of view, and whether it is in that point of view you do not see the value of that particular study?—I see the value of those studies which do lead to such a result, but I think that at present society at large, is almost ignorant of the like, and greater, value which belongs to the kind of studies which I recommend.

57. I was only speaking with respect to your answer, that you had not been able to understand what was meant by training of the mind through classical studies?—Yes. I understand so far that it is not in the mere learning of a multitude of authors, either Latin, or Greek, or Hebrew, but in the habit of training up the mind to certain customs, and certain modes of thought and of judgment. Nevertheless I say, that these physical sciences, in my opinion, ought to be brought forward also, and I say it the more boldly, because the learned men who have been so educated in languages do not show any aptness to judge of physical science. In matters of natural knowledge, and all the uses and applications derived from it, I should turn to a man untaught in other respects who I knew was acquainted with these subjects, rather than to a classical scholar, as expecting to find within his range that mode of mind, or that management of the mind, which would enable him to speak with understanding. Any word I have said that has led you to think that I am opposed to classics, I must withdraw; I have no such feeling.

58. (*Sir S. Northcote.*) Assuming that you get the class of teachers that you want, I wish to know as distinctly as I can, what is the amount of demand you would make, in point of time, for instruction in physical sciences with boys of the upper classes?—I should not make much demand until they developed themselves, as I expect they would do, and until they had manifested what naturally they ought to pursue, and wish to pursue. I cannot think it right that any large and whole system of education should drive all minds throughout their whole course in the same channel.

59. I want clearly to understand you; you would begin education in physical science at a very early age?—At a pretty early age; I know no limit from circumstances.

60. Without reference to the special or professional requirements of the individual, you would carry on education in physical science for all, up to a certain point, I suppose?—I think it would be good if it could be so.

61. You would wish to see it?—I should like to see it.

62. I want, as far as possible, to see how much time that would require, in the case of the general run of boys, because, in taking a general view of the education of the upper classes, it is necessary to see how you would provide for all kinds of education or instruction which they are to receive. We must find a place for classics, for physical science for mathe-

GENERAL EVIDENCE.

Michael Faraday, Esq., F.R.S.

18 Nov. 1862.

matics, and so on. Can you at all give us an idea of how much you would demand, in order to make the study of physical science really useful to the generality of boys?—You say that you are endeavouring to consider the condition of education as regards the *upper* classes; if that be all, I am saying perhaps much that should be modified, for I expected you were taking all classes.

63. Perhaps it may save time to explain to you that our inquiry has reference to the condition of education in nine of the principal public schools, in Eton, Harrow, Winchester, Westminster, Rugby, Charterhouse, and some others, and the question which we are particularly now to investigate is, how far the instruction in physical science could be introduced usefully into these schools. It is not, of course, proposed to substitute it wholly for instruction in classics, but we want to know how much you would demand on the part of physical science for these schools, in order that we may see how far it is possible to harmonize it with the classical work?—It is very difficult for me to say. I think that the public schools include many that are to become professional men, engineers, medical men, and such like. All that are so looked at or thought for, ought to have a good fair time allowed to get their science. A gentleman of fortune who could live as he pleases, if he is a good scholar, if he has the matriculation knowledge pointed out here, would have enough for any purpose unless he himself wished to pursue science. It is a most difficult thing to say.

64. I will try to bring it a little nearer to the point by putting it in this way. We are dealing on the whole with boys of the ages, we may say, of from 12 to 18, many of whom are going to the universities, others of them are going into the army or into other professions; they are all, it is assumed, to have a fair classical and mathematical education. Now, in your view, would it be of any material use to give those boys a set of lectures, some 12 or 20 in the year, by the best men who can at present be obtained, upon physical science generally, or would you think it better to establish special classes in those schools, which classes should be attended by boys who wished to take up physical science, and who should drop some part of their classical work, and really study it systematically?—To form a right judgment there, one wants to know what the future would be for those boys, and also for education. Such lectures would be very valuable, but they would be in small proportion to the whole amount of education which science deserves. Such classes might be made of the highest value. But as I said before, the decision must depend upon experience. The first thing to do is to give scientific teaching an assured and honoured place in education.

65. With regard to lectures, do you suppose that if we were to recommend, and if the schools were to adopt, a system of having a dozen lectures in the school time upon any general subjects by persons that the schools could get to come down, it would do any substantial good, or if that was done, that you could really say that physical science was taught in those schools?—I should say, no doubt, it was taught to a certain degree in those schools. As for its being taught enough, I dare not venture to say that. I think you must be guided by experience more than by any pre-judgment on that point. Good lectures might do a great deal. They would, at all events, remove the absolute ignorance which sometimes now appears, but would give a very poor knowledge of natural things.

66. You see there are two alternatives presented to us by those who argue for the introduction of physical science. Some say, let us give it generally to all the boys, and if that is done, then the masters of the schools say they cannot afford more than so much time from the classical teaching. Others say, do not attempt to give it to all the boys, but establish upper classes, in which a certain number of boys shall be taught, and thoroughly taught; and let them drop classical work to a certain extent, in order that that may be so taught. I wanted to know what the value of such general teaching, as is spoken of, is likely to be, and whether, in your judgment, speaking on behalf of physical science, you think it would be worth the introduction of such a system of lectures as I have alluded to, but which we must presume could not at the outside be more than 20 in the year?

(*Mr. Vaughan.*) I do not wish to interrupt you, but as you are stating views taken by other persons, perhaps you will permit me to say, that it did not involve dropping some of the classics, it might be dropping modern languages.

(*Sir S. Northcote.*) Then, I will say, "other "work"?—I should be very sorry that the introduction of science should be an injury to any other branch of knowledge. I say it in those general terms, because I have not experience enough to know what the effect would be. I should be very sorry to have it dropped, but I do not know how much time you ought to take, or in what shape you ought to take it. As a general impression always liable to this, that there are individuals who deserve encouragement in one path, and others who deserve it in another, I think that one-fifth, certainly, of the time which the individual devotes to study ought to be devoted to the attainment of natural knowledge. In what shape you should give it I cannot say. I think that in less than half a century it will deserve and obtain far more, but I am not for doing hastily an injury to the schools as they are at present established. Nevertheless, I beg you to understand that I am a very imperfect judge on these matters.

67. I do not feel quite sure now that I have got an answer to the question I put to you with regard to the lectures. You know that there is a general feeling, or at least there is a feeling with a certain part of the public, that physical science ought to be more attended to in public schools, and that feeling of course you share. It is quite conceivable that the public schools might adopt a system of giving a few lectures in the year, and might thereupon say, "We "have met the wish of the public, and are teaching "physical science." I want to know whether you consider that to be anything worthy of the name of teaching physical science?—I think it would, in any case, be but a poor and temporary expedient; and, if done grudgingly, no expedient at all. Everything in these matters must depend on the spirit and the manner in which the instruction itself is conveyed and honoured. If you teach scientific knowledge without honouring scientific knowledge as it is applied and those who are there to convey it, you do more harm than good. You only discredit both the study and the parties concerned in it.

68. (*Mr. Twisleton.*) In your opinion ought not a portion of the elementary knowledge in physical sciences to be habitually given to all boys?—Yes; I think so.

69. That would be quite compatible, would it not, with allowing those who have a peculiar aptitude for it to push their inquiries further?—I think so.

70. Have you observed in boys of a particular age a pleasure in having natural science communicated to them?—In all boys, do you mean, or in some boys of a particular age?

71. In boys generally?—I find a difference in their likings and dislikings.

72. Have you generally found the boys to whom you have given lectures take interest in your lectures?—Both boys and girls come rushing up to the table. I am under this disadvantage in that respect, that those who like it best come first, and they so crowd round as to shut out those who do not like or care for it. I never yet found a boy who was not able to understand by simple explanation, and to enjoy the point of an experiment.

73. Is it not the case that there is a difficulty in making grown-up persons take an interest in these subjects unless they have been taught early?—I can-

not say much about that. I cannot trace that; I do not know the antecedents of those people enough. I should expect it. The love of the thing grows with the study. I am accustomed to concern myself with, and to be surrounded by, those who like my pursuits, and therefore I am not a fair judge of others generally; but I do think that the study of natural science is so glorious a school for the mind, that with the laws impressed on all created things by the Creator and the wonderful unity and stability of matter and the forces of matter, there cannot be a better school for the education of the mind. Then, again, look at the results to society. If you develop men and make them intelligent and active in a particular course of study, either chemistry or anything else, what a prize it is to humanity, and what a good that education should develop such men.

74. (*Mr. Vaughan.*) With regard to the point as to the discipline of the mind, I just wish to ascertain your opinion a little more distinctly. Am I misconstruing you in stating that you think that whatever claim classical instruction may fairly make to giving a discipline to the mind, and to giving such a discipline to the mind as will enable it to add other knowledge after the classical instruction is given, yet that it does not give a peculiar discipline calculated to enable a person to master physical science?—I have no doubt that it facilitates the endeavour that mind would make in the acquisition of physical knowledge, or rather in reasoning upon certain parts of physical knowledge, but it gives no knowledge of the facts, and no knowledge of the laws.

75. I thought for a moment that you had observed that persons who had been great scholars, whom you knew to have been great scholars, and to have had that discipline and classical instruction given, yet would come to you with the mind not only unimpressed with the facts, and therefore totally ignorant, but also with the mind not particularly apt to receive instruction upon it?—I hope I shall offend nobody if I try to illustrate my feeling in that respect. Up to this very day there come to me persons of good education, men and women quite fit for all that you expect from education; they come to me and they talk to me about things that belong to natural science; about mesmerism, table turning, flying through the air, about the laws of gravity; they come to me to ask me questions, and they insist against me, who think I know a little of these laws, that I am wrong and they are right, in a manner which shows how little the ordinary course of education has taught such minds. Let them study natural things and they will get a very different idea to that which they have obtained by that education. It happens up to this day. I do not wonder at those who have not been educated at all, but such as I refer to say to me, "I "have felt it and done it, and seen it, and though "I have not flown through the air, I believe it." Persons who have been fully educated according to the present system, come with the same propositions as the untaught, and stronger ones, because they have a stronger conviction that they are right. They are ignorant of their ignorance at the end of all that education. It happens even with men who are excellent mathematicians. They and you will say, "but "you are most likely wrong, and they right." It may be so; at all events the education we speak of in natural things will be something in addition to that which they gain by their study of the classics. Until they know what are the laws of nature, and until they are taught by education to see what are the natural facts, they cannot clear their minds of these, as I say, most absurd inconsistencies; and I say again, as I said once before,* that the system of education that could leave the mental condition of the public body in the state in which this subject has found it must have been greatly deficient in some very important principle.

76. With regard to the physical sciences, especially chemistry, but the physical sciences in general, do you conceive that, supposing they were embodied into the curriculum of an education lasting we will say from 12 years old to 18 that they would furnish sufficient material for an education going through the whole of that time?—You mean whether the matters we speak of would furnish sufficient material for an education lasting for those years?

77. Yes?—Yes. They never come to the end of this education. Which of us has got to the end? It is true that the more a man knows the more he is aware of his ignorance. It is truer there than anywhere else. But he is ever advancing.

78. I was speaking as to a humble sphere and for an inferior purpose, but still for a useful purpose. I wish to ascertain what your opinion is as to the practicability of making a long school education out of these subjects, in which you might carry boys on from subject to subject, and test their knowledge by examinations till they left the school?—Well, if you can do that so much the better, but I would not sacrifice any other kind of knowledge for this as a general arrangement.

79. I was not asking so much as to its comparative position as to the point whether, supposing that education were to be continued so long in a school, there would be quite sufficient material for it?—Our life, our time, our faculties wear out. Men have worn out, but the matter of *this* education, with all its developments and all its rewards, is ever there, growing into the future.

80. Supposing, again, that examinations were conducted in these subjects, do you think that those examinations could be so framed as to test the ability and the solid knowledge that was acquired in the school?—I hope the teachers and examiners would get the power both of introducing and testing the new knowledge, if they had the opportunity.

81. I meant to ask whether the knowledge that could be presented in a school for acquisition, and could be acquired in this way, could be made the subject of examinations so as to test the proficiency of pupils and enable the examiners to state their order of merit one above another according to their attainments and their ability?—I have no doubt of it.

82. You were speaking a short time back of the names in science; I believe it is the case, is it not, that not only in chemistry, but in nearly all the branches of physical science, for example, botany mineralogy, physiology, names have been given from the classical languages?—I think so.

83. I suppose that those names generally record, sometimes mistakenly, of course, but according to the notion of the age in which they were adopted record some principles in the science to which they belong?—At times they have been descriptive as far as possible. The word chlorine refers to a particular quality. At times they have been named from their discoverers, such as voltaic electricity, and at times they have had other origins. We never have been able to apply only one system either classical or scientific.

84. Take, for instance, the nomenclature of chemistry, I suppose on the whole it has been both classical in its origin as far as the language goes, and it has been generally descriptive either of some fact or some theory connected with that fact in the matter which it represents?—I do not think it has been classical so much in chemistry as in many other subjects. It has been strangely heterogeneous, and it has led to this, that the names in chemistry have been frequently so new, so complicated, so curious, and so disposed, that we hardly know them. At present a set of names in chemistry of the highest importance are compounds of original names put together, as the Chinese, I understand, put words together, so as to make up a word of very many syllables having an immense sound, and having a very strong meaning to those who can remember the different syllables, but which by its authors, and those who have built up this system, is acknow-

* Times, June 30, 1853.

GENERAL EVIDENCE.

Michael Faraday, Esq., F.R.S.

18 Nov. 1862.

ledged to be nothing more than a scaffold, which the sooner they can pull down and destroy the better they will like it.

85. I was saying rather, perhaps, of the elementary terms in chemistry, of the things you have mentioned, chlorine, hydrogen, and oxygen, carbon, iodine, and a great many more, and the same language applying to both, and so also of the elementary terms in botany and natural history in general, anatomy and physiology, that they were very much derived from the classical languages, that is to say, either Latin or Greek, and at the same time more or less descriptive of some supposed truth connected with the objects which they so describe?—Yes.

86. I proceed to ask you whether that condition in the nomenclature to a person who has not learnt classics does not present a difficulty, which to a person who was learning, or has learnt, the classical languages, vanishes?—Greek has been a valuable language for chemistry in its time, for its suggestions of names for substances, with reference to their properties; but the different theorists have thrown those names aside and given them other names; for very many errors as to the qualities of things in chemistry stepped in and were retained with their names. Of course, we should like to get at the truth of the facts of chemistry, and express them by a name if we could.

87. Should you think that, so far, a classical education came in well with physical science, from that particular feature in its history, that from some reason or other, the nomenclature, not of chemistry only, but of all to a great degree, had receives its meaning from the classical languages?—I think so well of it that I, myself, in the course of my experiments, have referred again and again to the classics, to Whewell, and to others, for names for powers and effects which I wanted in the course of descriptions of electricity. I have gone again and again to him and his Greek for the names I have had to use in my papers.

88. If it were necessary to draw out a scheme of public education or education generally, it being impossible to teach all physical sciences, I presume that a judicious mind would not find any very great difficulty in selecting a certain number of the sciences, which are more particularly initiative and fundamental in their character, and universal in their application, and which should be taught first?—I have that impression certainly, very strongly; some *parts* of science, I would say.

89. I suppose there can hardly be a doubt that what has been taught as chemistry is one of those?—A part of it. I think you would better indicate what knowledge ought to be obtained in that sort of way, by speaking of the subjects, the atmosphere, the waters, and the earth. I would also have a little astronomy.

90. I mean in this point of view; if you go into physiology there are a great many physiological actions that are chemical as well as vital, and partly determined by chemical laws acting on chemical elements?—No doubt.

91. Some again are mechanical; and so again if you go into botany there are also chemical agents and principles involved, indicating therefore that chemistry should be one subject which should take precedence in the order of instruction?—I think it ought to come very early, as being one of the fundamental sciences, but to say that you were to pursue it to the utmost or exclusively, would, I think, be an error.

The witness withdrew.

J. Hooker, Esq., M.D., F.R.S.

J. Hooker, Esq., M.D., F.R.S., called in and examined.

1. (*Lord Clarendon.*) I believe you are a Fellow of the Royal Society?—Yes.

2. And Assistant Director of the Botanical Gardens at Kew?—Yes.

3. You are the author of Travels in the Himalaya?—Yes.

4. From your experience, and the means of observation you have had, have you formed any opinion as to the state of knowledge in natural and physical sciences with respect to the education of the upper and middle classes as it exists at present?—At Kew we are thrown into contact with persons belonging to the middle and upper classes in very large numbers, and I think the regret that they know nothing of botany is quite apparent in all their communications with us. Hardly a day passes but what we receive communications from some part of the world in which such regret is expressed.

5. What are the nature of the communications into which you are brought with these classes at Kew?—Most prominently now with regard to vegetable fibres. Sometimes two or three letters a day come to us requiring information with regard to well known fibres, which the slightest habit of observation or the slightest knowledge would assure the persons who send them that they cannot in any way be used for cotton.

6. Then those have been comparatively recent communications?—No; they have gone on for the last 20 years of my father's experience, and the last 10 years of my own; not so much formerly with regard to cotton fibre for the use of yarns, as for making paper, and for many other purposes to which cotton is applied.

7. In fact you say that the upper and middle classes in this country are in the habit of constantly consulting either your father or yourself at Kew?—Yes, both officially and unofficially.

8. And both the subjects upon which they wish to have knowledge and their mode of inquiry lead you to think that they are in a state of great ignorance?—Yes.

9. That that study in particular has been greatly neglected by those classes?—Very greatly.

10. And they have generally expressed their regret that it has been so neglected?—Universally, I may say.

11. You have probably considered that the neglect of this important study is a matter of national regret?—I have always thought so.

12. Have you ever turned your attention at all to the possibility of teaching botany to boys in classes at schools?—I have thought that it might be done very easily, that this deficiency might be easily remedied.

13. What are your ideas on the subject?—My own ideas are chiefly drawn from the experience of my father-in-law, the late Professor Henslow, Professor of Botany at Cambridge. He introduced botany into one of the lowest possible class of schools, that of village labourers' children, in a remote part of Suffolk.

14. Perhaps you will have the goodness to tell us the system he pursued?—It was an entirely voluntary system. He offered to enrol the school children in a class, to be taught botany once a week. The number of the children in the class was limited, I think, to 42. As his parish contained only 1,000 inhabitants, there never were, I suppose, the full 42 children in the class; their ages varied from about 8 years old to about 14 or 15. The class mostly consisted of girls.

15. In this village school?—Yes; that is to say, those who volunteered might come up to that age, and, indeed, almost any age, but the average age of the pupils was between 8 and 12 years. He required that, before they were enrolled in the class, they should be able to spell a few elementary botanical terms, including some of the most difficult to spell, and those that were the most essential to begin with. Those who brought proof that they

could do this were put into the third class ; there they were taught once a week, by himself generally, for an hour or an hour and a half, sometimes for two hours, (for they were exceedingly fond of it), on the Monday of every week.

16. In the evening ?—No ; in the afternoon ; I think it was three o'clock, but I am not sure of that.

17. Did he use to take them out into the country, or was it simply lessons in the school ?—He left them to collect for themselves ; but he visited his parish daily, when the children used to come up to him, and bring the plants they had collected, so that the lessons went on all the week round. There was only one day in the week on which definite instruction was given to the class, but on Sunday afternoon he used to allow the senior class, and those who got marks at the examinations, to attend at his house.

18. So that they had the encouragement of getting marks, and of having corresponding places in the botanical class ?—Yes.

19. Did Professor Henslow find any difficulty in teaching this subject in class ?—None whatever.

20. No more than he would have had in dealing with any other subject ?—None whatever : less than he would have had in dealing with almost any other subject.

21. Do you know in what way he taught it ; did he illustrate it ?—Invariably he made it practical. He made it an objective study. The children were taught to know the plants and to pull the plants to pieces, to give their proper names to those parts, to indicate the relation of those parts to one another, and to find out the relation of one plant to another by the knowledge thus obtained.

22. Those were children, you say, generally from 8 to 12 ?—Yes, and up to 14.

23. And they learnt it readily ?—Readily and voluntarily entirely.

24. And were interested in it ?—Extremely interested in it. They were exceedingly fond of it.

25. Do you happen to know whether Professor Henslow thought that the study of botany developed the faculties of the mind, that it taught these boys to think ; and do you know whether he perceived any improvement in their mental faculties from that ?—Yes ; he used to think it was the most important agent that could be employed, for cultivating their faculties of observation and for strengthening their reasoning powers.

26. He really thought that he had arrived at a practical result ?—Undoubtedly, and so did every one who visited the school or the parish.

27. These were children of quite the lower class ?—The labouring agricultural class.

28. And in other branches receiving the most elementary instruction ?—Yes.

29. And Professor Henslow thought that their minds were more developed, that they were become more reasoning beings, from having this study superadded to the others ?—Most decidedly. It was also the opinion of some of the inspectors of schools who came to visit him, that such children were in general more intelligent than those of other parishes, and they attributed the difference to their observant and reasoning faculties being thus developed.

30. Did he adopt any particular way of teaching. Did he teach them all together or in classes ?—He divided them into three classes.

31. Of proficiency ?—Yes. I cannot give you the details of the differences between the classes, but as a general rule the youngest children were expected at first, on entering the class, to be able to apply the two or three most prominent terms used in botany. For instance, all plants are divided into three large classes or groups which have names, and which groups are easily recognisable by any child of ordinary intelligence, and he required that each child should spell such names properly, (which he made a special point of), and apply them to some conspicuous plants belonging to such groups. That was a *sine quâ non* to enter the first class, the lowest class of all.

32. So that the intellectual success of this objective study was beyond question ?—Beyond question.

33. Has your attention been directed to the subject in other directions than that of botany. Have you had any occasion to remark the effect of learning sciences of observation as a training of the mind ?—Only so far as that I have had a medical education myself, and fancy that I have observed that medical men's minds are, from the education they have received, perhaps more opened than the average in other classes of society.

34. Would you say that those medical men to whom you allude had much training in sciences of observation in general, at all events in the early parts of their school career have they not been restricted to classics and mathematics ?—Entirely so; but the moment they enter the medical class their observant faculties must be trained both in the study of anatomy, and in observing patients at the bedside, and writing down their cases.

35. From your communication with these men, or from your own observations with regard to yourself and your medical education, should you say that those minds that have been restricted, if I may say so, to the study of mathematics and classics, had any peculiar aptitude for the reception of other knowledge. Was a mind so trained more ready to receive impressions than a mind not so trained ?—I think a mind mathematically trained would more readily receive such impressions, but not a mind trained in the classics, as far as my experience goes.

36. You have not been able in the course of your experience to observe any notable good result in the training of the mind from classical studies ?—I should be very sorry to go so far as that, because I think that any education, whatever it is, on any subject, must necessarily expand the mental powers, but I think I should put classics at the bottom, and mathematics next, and I should put natural history first, not because it is better than mathematics, but because it can be taught at an age when mathematics would injure the mind, and, further, it is applicable to minds which have no capacity for mathematics. A child can begin natural history at eight or nine years old, and it could be made an amusement and a pleasure if properly taught. A child after having examined one buttercup, is enabled thereby to recognize another though dissimilar kind of buttercup, and the process affords pleasure.

37. So you think that at that age they might really be imbibing such knowledge when the study of language was irksome to them ?—Yes.

38. And receiving that knowledge in a way that would make a lasting impression ?—Yes.

39. You have had no reason to think that the study of classics, that is to say, the study of language, the composition and construction of language, is not a good training for the mind ?—I am not a fit judge of that question. It has always appeared to me that classics might be so taught as to be a very much better means of training the mind than they are.

40. The medical men to whom you have alluded commenced these studies about 17 or 18 ?—Yes.

41. Those men have generally been to some public school, I suppose ?—Generally to some school.

42. Have you not found that from those schools they bring a certain amount of intelligence and aptitude for learning in consequence of the system in which they have been brought up ?—I cannot answer that question, because all having been to some school, there is no means of comparison. It is not as if I could compare medical men who have not been to schools with those who have.

43. (*Lord Lyttelton.*) Should you say they have a fair aptitude ?—Yes ; except for that they could not become medical men ; they would not pass the required examinations.

44. (*Lord Clarendon.*) The majority of these young men who are intended for the medical profession, and who come from the various public schools of the country scarcely ever bring with them any physical science, do they ?—None whatever, or very rarely.

GENERAL EVIDENCE.

J. Hooker, Esq., M.D., F.R.S.

18 Nov. 1862.

45. As far as your observation goes, that is generally neglected in your profession?—Yes; and it is a want more felt by medical men than by any others. The amount of botany and chemistry required by the medical man might be as easily obtained at school as during the time he is undergoing his medical curriculum.

46. I suppose you have found a sentiment of regret prevailing amongst them at the manner in which those valuable years of their lives had been employed?—Very generally.

47. And they would have liked to have spent them differently?—Yes, to a great extent. I never knew them regret their classics and mathematics; quite the contrary; but they do regret very much that their faculties were not earlier trained to habits of observation. When they go round the hospitals they have felt that they have not been taught to observe and to reason upon what they observe as might have been.

48. Do you think there is a general feeling amongst those men that the study of physical science might have been added to the classics without impairing that knowledge which they would be glad to have acquired?—That was the universal feeling.

49. That that might have been superadded without injuring the other studies?—Yes; and most especially with regard to botany, which they have very little time to pursue after they have commenced their medical studies, and of which they are now obliged to obtain a knowledge after their medical curriculum has commenced. The amount of botany taught to medical men during that time is nothing more than what they might have acquired before. What they learn there has little direct application to medicine.

50. That which they are required to learn you think might have been taken in very easily at the same age as that at which it was imparted to his pupils by Professor Henslow?—Undoubtedly. I know that in conducting the examinations of medical men for the army, which I have now conducted for several years, and those for the East India Company's service, which I have conducted for, I think, seven years, the questions which I am in the habit of putting, and which are not answered by the majority of the candidates, are what would have been answered by the children in Professor Henslow's village school. I believe the chief reason to be, that their observing faculties as children had never been trained, such faculties having lain dormant with those who naturally possessed them in a high degree, and having never been developed by training in those who possessed them in a low degree. Furthermore, in most medical schools, the whole sum and substance of botanical science is crammed into a few weeks of lectures, and the men leave the class without having acquired an accurate knowledge of the merest elements of the science.

51. (*Mr. Thompson.*) Are you speaking of Woolwich?—I am speaking of the medical schools everywhere.

52. You examine in botany?—I examine in physical science generally, but chiefly in natural history. My chief object is to ascertain whether the men have a fair aptitude for using their observing faculties as tested by those sciences, and chiefly by botany.

53. (*Lord Clarendon.*) In fact, it is not from observation that botany is taught to these medical men. I suppose they cram it in London?—Yes, most of them, in London or elsewhere.

54. Having foregone or not having had the advantage of doing it in the other way?—Yes.

55. (*Lord Devon.*) Were you a public school man yourself?—I was at the High School at Glasgow.

56. That is a large school?—Yes.

57. Was there anything done in physical science there?—Nothing whatever.

58. (*Lord Lyttelton.*) Is there not now?—I have not heard that there is. The High School was an exceedingly bad school in my time. We had only one master for 110 boys.

59. (*Lord Devon.*) Was that the whole number of the school?—No; the whole number that entered the class I was in. That is a long time ago.

60. I think we understood you to say that you found a very general feeling, on the part of young men entering the medical profession, of appreciation of the value of classics and mathematics, but still of regret that something had not been superadded in the nature of instruction in physical science?—Yes.

61. Was there a general opinion, further than that, that time was wasted; that the same amount of classics and mathematics might have been communicated in less time?—I am not prepared to give any opinion upon that, because these subjects are taught so very differently in different places. I have heard both regrets expressed.

62. You found a general appreciation of classics and mathematics as to the training for the profession?—Yes; undoubtedly.

63. (*Mr. Thompson.*) Is it not the general opinion in the medical profession that there is some considerable advantage to an incipient practitioner to have had what is called a university education or a public school education?—I have never heard such an opinion expressed. Of course there is a universal opinion that a good education, wherever got, is essential, or ought to be essential. I cannot say that I know of any feeling more in favour of public schools than of private ones, or of universities than either.

64. I do not mean that; but that there is a feeling in the profession in favour of a classical and mathematical education?—Yes, decidedly, very strong indeed.

65. There is a strong opinion?—Yes; I do not think any intelligent medical man would deny it.

66. Or would regret having had a thorough training in mathematics and classics, such as is given in public schools?—With regard to mathematics, a thorough training often is regretted, because it has been pushed further than persons have ability for. My own impression is, that every boy ought to learn some mathematics; that a book or two of Euclid ought to be obligatory on every one preparing for the medical profession. I know there are many cases of youths who are apt in acquiring a knowledge of physics or the biological sciences, but who could not be pushed beyond a certain point in mathematics.

67. Professor Henslow had a very remarkable talent for instruction, had he not?—Yes, and very remarkable powers. He was an excellent mathematician himself, and a very good scholar.

68. Do you think if the subject, instead of botany, had been zoology, chemistry, or geology, that he would have produced equally striking results?—No.

69. In improving the intelligence of his pupils?—No; because these are not such good instruments as botany. The advantage of botany is that you can teach it anywhere and everywhere. The child as he walks along can make use of his botanical knowledge, can preserve his specimens, and having put his information into writing, can preserve this alongside of the specimen itself. This cannot be done to such advantage by a child in the case of geology, nor any branch of science except natural history ones, of which the most facile for the purpose is botany.

70. In the case of a school in the middle of a large town, such as some of those with which we have to do, do you not think some other science would be more applicable than botany?—No. It would be perfectly easy to teach botany in any town. Any market gardener for a few shillings a year could supply all that was necessary, and one excursion a month, with the teacher, would make up for the rest. Those who lived out of the town could bring plants in with them.

71. Would it excite much interest in the minds of boys brought up in London, do you think?—Quite as much or more than in those brought up in the country. It would be a much greater recreation to them, inasmuch as it would occasionally take them to the country.

72. Is botany a popular subject in London. Are lectures given, for instance, at the Royal Institution? —Not many; very few, but that has been chiefly from the want of lecturers.

73. It is not so popular as chemistry?—Not nearly so. It is not so generally useful. Then the experiments are not so interesting and so startling.

74. I understand you, that you advocate botany for young children because of its simplicity and the ease of teaching it?—Not altogether so; I advocate it because it improves both the observing powers and the reasoning faculties of young children in a way that chemistry could not. I do not see how you could apply chemistry as you would botany as a means of early education. The child knows its few botanical terms, some of them hard, but not harder than those used in chemistry; you lay the plant before it: itself takes a plant to pieces, and tells you the forms of the parts, the relations of these parts, and the signification of these parts and of their relations. You take another plant and itself applies the knowledge obtained from the first plant to analyse the second, and so on.

75. I think Professor Henslow wrote a paper or pamphlet upon the application of botany to education, did he not?—There was a little pamphlet published, I think, by the South Kensington Museum.

76. I thought it was published in Cambridge?—He published several books in Cambridge, and he used to print the syllabus of his lectures.

77. I think there was a little pamphlet on the educational uses of botany, do you remember it? —I do not remember it; but I have no doubt he did, because he was in the habit of printing and distributing educational projects.

78. You have not a copy of the pamphlet? — I will inquire, and if there is one I will direct it to the Commissioners. There is a general account of what he did in Mr. Jenyns' life of Professor Henslow.

79. But in the one I allude to he rather treats of the theory of the educational uses of botany. Mr. Jenyns, I think, only speaks of his practice?—Chiefly of his pratice.

80. (*Lord Lyttelton.*) Is it still the custom that a Latin oration, which is called the *Oratio Harveiana*, is delivered every year?—I am not aware that it is in Latin now. It used to be in Latin.

81. (*Mr. Twisleton.*) Would you see any difficulty in teaching botany regularly in public schools to classes of 30 or 40 boys in the middle parts of the school, two hours a week?—None whatever, provided the other lessons were not too long.

82. And if two hours a week were set apart for instruction in botany during the whole year, or during two years, do you entertain any doubt that they might be thoroughly grounded in that science? — None whatever, if it were properly taught.

83. A comparison has been made, as to popularity, between lectures in chemistry and lectures in botany. There is a reason, is there not, why merely professional lectures on botany are not so popular as such lectures on chemistry, because the experiments in botany are not so brilliant?—They are not so brilliant. It is impossible for anyone to learn botany properly, except by himself pulling plants to pieces with skill and judgment. Now plants are always accessible, every child has the skill, and the judgment comes by experience and teaching. This is why I so strongly advocate botany, as the readiest, simplest, and most practical means for training the observing and reasoning faculties. Such training cannot be given by lectures.

84. But even as to popularity, botany would not be at the same disadvantage if the instruction were not merely professorial, but children were required themselves to take the plants, and observe them, and describe them?—Not at all.

85. So that in practice, if the instruction was pursued properly, there are greater facilities for teaching botany, and the objections which apply to mere lectures, would not apply to teaching in classes? —Not at all.

86. At the High School in Glasgow did you observe among boys a difference of aptitude for the three branches of languages, mathematics, and the sciences of observation?—Very great.

87. A boy who distinguished himself in classics might have an inaptitude for mathematics and natural science, and *vice versâ*?—Yes. One of my own classmates was a dull boy in the High School, where mathematics were not then taught except in the senior class, which I did not attend. He was the best mathematician of his year in the University afterwards.

88. Do you not think that it is very undesirable that a boy at school having faculties of a particular kind should have them wholly neglected. Take the example of a boy who had really an aptitude for the natural sciences, do you not think it is a very hard case that his faculties should be wholly neglected?—I think it is very hard. Nothing is more destructive to his whole education.

89. Supposing that boy happened not to have a turn for languages, his place in school would be very low down. Would not it have an injurious moral effect habitually for him to be regarded as stupid because he had no talent for languages?—Yes.

90. It would have a tendency to impair his self-respect?—Quite so.

91. The same boy, if he had an opportunity of cultivating his faculties in the natural sciences, and using his abilities there, would be likely to become a much more useful member of society?—Yes, much more.

92. Have you observed among boys that it is desirable that there should be a variety of studies?—I have not directed my attention to that.

93. You have not observed that you should not argue from the advantages of concentration in grown up men against variety in the studies of children?—I think they are totally different things. I think there ought to be variety, undoubtedly, for the children, and more concentration in after-life.

94. So that you might teach a little of various subjects to children with advantage, where you would not proceed on the same principle with grown up men?—Yes.

95. I believe you gave lectures on this subject to the Royal children?—No; but I accompanied Professor Henslow when he gave lectures and demonstrated plants to the Royal children.

96. Were you acquainted with the opinions of Prince Albert as to the desirableness of making acquaintance with the natural sciences a part of the education of boys?—He was very strongly in favour of it, and it was on that account he asked Professor Henslow to give these demonstrations at the Palace.

97. Are you aware that he expressed his regret at the general neglect of the physical sciences which prevailed in England?—He expressed himself strongly on that subject to Professor Henslow in private on several occasions, long previous to his attending at the Palace.

98. To come back to the schools of Professor Henslow, did any practical advantage result to the children from this acquaintance with botany?—He has told me of instances in which these children have gone out to service afterwards and in which those qualities have come out very eminently in them. They have been more useful and more handy, and especially as nurserymaids. They have been more agreeable to the children and more amusing to them. They do not stop and drag the child along, when the child itself stops to look at a flower, piece of grass, or an insect. They stop too.

99. So that it really has been useful to the scholars afterwards at service?—Very useful.

100. (*Mr. Vaughan.*) Have you ever acted as examiner of medical students?—Not in medicine. I examine for the Army Board men who are candidates for assistant surgeonships. These are not medical students, but men who must have taken diplomas before they come before me as an examiner.

101. Are you acquainted with the medical profession well?—I cannot say well, but incidentally I am. I have had a medical education.

GENERAL EVIDENCE.

J. Hooker, Esq., M.D., F.R.S.

18 Nov. 1862.

102. You know generally what medical education has been or is now?—Yes, I know a good deal about it.

103. Do you know whether in the higher branches of the medical profession there are a great many who have been to the English universities and public schools?—I should say very few who have been to the English universities.

104. And to the public schools?—I should say not many. A larger proportion have not, I should say. I mean not to the great public schools, as Eton, Harrow, &c.

105. Are there many that are now acquainted with classical languages, or do you think that that education is going into disuse?—No; I think it ranks higher with medical men than it used, but that is because medical education itself is very much improved.

106. When you say "used," you speak of the usage of 20 rather than of 40 years ago?—20 years ago.

107. There has been some considerable reaction in the last 20 years?—Yes. They are all examined more strictly in classics now than they used to be.

108. Do you know what has been the feeling that has produced that reaction in favour of the classics, which you speak of as now existing?—I am not prepared to say off-hand. I think, however, on consideration, there would be no difficulty in answering it.

109. As a matter of fact, it is the case that the classical education is becoming more valued. You may say that generally?—I think so, decidedly.

110. Than 20 years ago?—Yes.

111. You do not know the grounds on which account chiefly it is valued, whether for the sake of the medical literature contained in the classical languages, or for the sake of the discipline?—It is for the sake of the discipline chiefly, and for the proof that a man has had so much mental culture.

112. I suppose, however, that there is a very large medical literature in the Latin language even still, written by famous anatomists and physiologists?—Yes; but I think that all they have written has been embodied in the vernacular of the chief European languages long ago.

113. It being the case that classics are very much valued, do you suppose that if the physical sciences, which are necessary to medicine, were, together with these valued languages, taught at the public schools, the opportunity of getting both the classics and the physical sciences would attract persons who intended to adopt the medical profession very much to them. In other words, would not the incorporation of physical sciences into the teaching of the public schools, as classics are already taught there, have the effect of attracting a great many, who intend to make medicine their profession, to the public schools?—It is difficult to answer that question, because, as a general rule, the medical profession is recruited from a class of society that does not send its sons to the great public schools in England.

114. You think that the absence of those intended for medicine resolves itself into that?—I think so in the present state of the schools and of the profession. Hitherto the medical profession has been recruited rather from the middle and lower classes than from the upper classes of society.

115. I hardly need ask whether there are not many physical sciences which are equally necessary to a medical education with botany itself, chemistry for instance?—Chemistry is much more needful.

116. And of course physiology and anatomy?—Infinitely. They are essential. My own impression man is the chief use of practical botany to the medical is that the training it gives to his powers of observation.

117. Has it been the case in the course of the progress of medical science that the botanical part of it has rather dropped out of applicability?—I think decidedly. A direct applicability do you mean?

118. Yes?—Yes; in the sense that the medical man is not a herbalist as he used to be.

119. I suppose there are very few of the physical sciences that are not ministerial in some way, and many of them most essential, to the medical profession?—They are all so. I think now the best medical degrees demand an elementary knowledge of every one more or less; certainly the London University degrees demand all, except, perhaps, applied mechanics, &c.

120. Is it the expensiveness of the public schools which deters medical students from resorting to them for general education as much as the education itself?—Yes; that has a great influence, because persons who have to educate their sons as medical men, know that the special education they have to give them as such will be a very costly one, and they are not prepared to send their sons to the most expensive public schools on the chance that the education obtained there will be worth the money, considering the great expense they will afterwards have to go to.

121. (*Sir S. Northcote.*) In their special teaching?—Yes.

122. (*Mr. Vaughan.*) Can you say what is the reason why persons in the upper classes and upper ranks of the middle classes at the present time are not so much in the habit of sending their sons into the medical profession?—It is a very difficult question to answer. In the first place the position of medical men in the public service ranks lower than it should; for instance, a young man who so goes into the army or navy can never rise to an official position equal to that of a colonel, or a general officer, or a field-marshal; he is put behind in every way; in the brevets that come out he is mentioned in a separate class apart from and after the executive officers. That is one reason. Then, again, many persons are disinclined to hospital practice, to anatomy and dissection. These are not usually considered to be the most pleasant pursuits.

123. (*Lord Lyttelton.*) You are aware of some schools, or departments of colleges, specially intended for medical education. I believe there is one at St. Bartholomew's, and I know of two at Birmingham, which attempt to give a cheap education, but in every case including classical teaching?—I know there are such, but I know nothing personally of them.

124. Do you know Queen's College and Sydenham College, Birmingham?—I know their names only. I was not aware that at St. Bartholomew's there was a very cheap school.

125. (*Mr. Thompson.*) You remarked just now about the unwillingness of parents to send their sons to public schools. Did you mean that to apply to boys or the parents of boys who had designed them to practise as physicians proper; are they not fully as high a class as the clergy and lawyers?—The physicians proper are a very small body. Very few men are educated as physicians proper.

126. (*Mr. Vaughan.*) But there has been a certain degree of revolution in the profession in that respect?—Yes.

127. That is owing to the higher education of what may be said to be the lower parts of the profession?—Yes; and because general practitioners are more in demand than physicians. A good general practitioner ought to know all the physician does, *plus* the surgery.

128. (*Mr. Twisleton.*) Are the medical degrees in the London University valued?—Much more highly than any.

129. Will you explain why?—Because they are so strict.

130. They are a pledge of previous acquirements in various directions?—Yes; they demand a more thorough education.

131. They require some knowledge of Latin and Greek for matriculation?—Yes; and mathematics too.

GENERAL EVIDENCE.

Victoria Street, Wednesday, 19th November 1862.

PRESENT:

EARL OF CLARENDON.
EARL OF DEVON.
LORD LYTTELTON.
SIR STAFFORD H. NORTHCOTE, BART.
HON. EDWARD TWISLETON.
REV. W. H. THOMPSON.
H. HALFORD VAUGHAN, ESQ.

THE EARL OF CLARENDON IN THE CHAIR.

RICHARD OWEN, Esq., F.R.S., called in and examined.

Richard Owen, Esq., F.R.S.

19 Nov. 1862.

1. (*Lord Clarendon.*) I believe, Professor Owen, you are Superintendent of the Natural History Department of the British Museum?—I superintend three of those departments.

2. What are those departments?—Those of Zoology, Geology, and Mineralogy.

3. You are also a Fellow of the Royal Society?—Yes.

4. And the author of well-known works on comparative anatomy, paleontology, and kindred subjects?—Yes.

5. In these different aspects, and altogether as an instructor of the public in these interesting subjects, I have no doubt that the state of knowledge of physical science in this country has been a matter of anxious consideration to you with reference to our educational system, and we should be much obliged if you would give us your opinion upon that subject?—I have long felt a great desire to see the time arrive when our larger educational establishments for youths, particularly the great public schools, to which the sons of the wealthy and territorial families in England are sent, should possess the means of imparting to them the elements and methods of natural history, either in botany or zoology, or both.

6. Do you consider that these branches of science have been ignored at the public schools to which you allude?—I am not aware of any arrangement or organization for a systematic instruction of the youths in those elements and methods at our great public schools, nor that they receive the smallest amount of natural history instruction. I am speaking of the science now as one of the branches of instruction systematically given; and that is my impression.

7. The result of your observation, coming in communication, as you must have done, with various classes,—the wealthy, the middle, and the poor,—I suppose is, that there exists a complete deficiency in knowledge upon these subjects?—The absence of a knowledge of the main end, methods, and application of natural history has appeared to me to be greater in the higher and more refined classes of the community, than in the middle, or perhaps even, as regards details or species, than in the lower classes. If I were to select a particular group it would be the governing and legislative class, which, from the opportunities I have had of hearing remarks in conversation or debate, appears to be least aware of the extent of the many departments of natural history science, of the import of its generalizations, and especially of its use in disciplining the mind, irrespective of its immediate object of making known the different kinds of animals, plants, or minerals.

8. I suppose, when you attribute this state of ignorance to the higher classes, you allude to the absence of instruction both at the public schools and at the universities at which these classes in particular are educated?—More especially at the public schools.

9. You are probably aware that at the public schools classics and mathematics are considered to be the best means of training the mind; but you, I suppose, would consider that is not the best training which omits the physical sciences?—Not the completest. Grammar and classics, arithmetic and geometry may be the most important disciplinary studies; we know the faculties of the mind they are chiefly calculated to educe; but they fail in bringing out those which natural history science more especially tends to improve. I allude now to the faculty of accurate observation, of the classification of facts, of the co-ordination of classes or groups; the arrangement of topics, for example, in their various orders of importance in the mind, giving to a writer or public speaker improved powers of classifying all kinds of subjects. Natural history is essentially a classificatory science. Order and method are the faculties which the elements and principles of the science are best adapted to improve and to educe.

10. We had an important witness here the other day, who gave us some interesting information, and one of the things upon which he laid a great deal of stress was a general deficiency in the exercise of the mental powers. He found this want was such as he might express by the term, a deficiency of judgment. Would you be prepared to agree in that opinion?—No. I presume that, now, something more than memory and imagination are exercised, and that the present system of education sharpens the mental powers for rigid deduction of consequences, as by geometry and mathematics; for close conformity of the word with the idea, and the whole faculty of word-fighting, as by logic. All these powers ought, at least, to be brought out, if I do not over-estimate the present system of public schools, to say nothing of the gain by discipline in the power of endurance of labour. I would not claim for natural history more than its due as an elementary training science to be taught in the schools. It is a science which benefits and improves the mind for accurate observation of things presented to the eye, and by bringing out the faculties of classification, order, and method. I cannot, for example, imagine any intelligent youth for the first time listening to the statement of the way in which, in natural history, any one plant or animal is referred to its species and genus, without being to a certain degree improved. For example, after hearing the general character of living or organized beings, he would then be told how we divide all these into the vegetable and animal kingdoms. We then take the animal kingdom, and point out the characteristics of its primary divisions or provinces, one of which is characterized by the back-bone and called the vertebrate province. He would then be taught how all back-boned animals are divided into fishes, reptiles, birds, and mammals. The boy would be told how and why he is a mammal, and what are the characteristics which put him into that class. Next he would be taught the sub-divisions of the class of mammals, distinguished by characteristics of the brain and limbs, as, *e.g.*, when one pair of limbs ended in feet and the other pair in hands, that the order *Bimana* was formed, of which mankind is the sole representative species. One cannot doubt the good effect that such an illustration would have in educing faculties of method and arrangement, by showing how, in an assemblage of animals which are to be counted by thousands, you are able to put every one of them by the methods of natural history into the right place, and to know where to refer to them in the zoological system.

11. And you consider that would be an important and useful training of the mind?—Surely.

12. Have you ever thought in what way the present system, which is by no means so defective in

GENERAL EVIDENCE.

Richard Owen, Esq., F.R.S.

19 Nov. 1862.

your opinion, as some people think it, might be improved, or how those improvements might be introduced into public schools, either on a different system or superadded to the existing system?—Yes; I have thought a great deal upon the matter, and I have discussed the question with masters of different grades of authority in public schools and other places of juvenile instruction. I am fully aware of the difficulties which surround the beginning of a reform, and the upshot has been the conclusion that the chief addition or improvement might be made at first, and the advantage sought for gained, if every boy at the proper age should be enabled, if not compelled, to listen to a course of lectures, or hour's instruction, in natural history. One hour in the week, during six months, I believe, would suffice for the good that one might expect from the teaching of natural history in such public schools as Eton, Rugby, or Harrow.

13. The lecture should be on natural history?—Yes.

14. Natural history would represent what?—It would represent, zoology, relating to animals; botany, to plants; mineralogy, to minerals. Of course it branches off into collateral subjects, as anatomy; some knowledge of that, indeed, would be necessarily acquired, because boys could not learn the classification of animals without getting some idea of the general principles of their construction. And so with regard to the classification of plants. Zoology and botany are both based on anatomy, or that which relates to the construction of animals and plants. With respect to geology, that would be too complex, and not necessary, I apprehend, for the main aim in view. All the disciplinary effect would be got by the lectures on natural history, which might be limited to one of the three classes, but I would more especially recommend the branch relating to vegetables or animals.

15. You must be a very good judge of the amount of information that can be communicated practically by a lecturer to young students, some of them perhaps not very willing ones. Do you think that an hour a week would be sufficient to impart that elementary knowledge at all events, which nobody ought to be without?—I think it would, by way of an experimental beginning. One cannot foresee what the ultimate demand might be, but as a commencement I should not be disposed to trespass to a greater extent on the amount of time which is now devoted to the old subjects of instruction than one hour a week during six months.

16. (*Lord Lyttelton.*) But you would test the retention by the students of what they understood of the lecture, in some degree?—Yes.

17. (*Lord Clarendon.*) That is to say, that the lecture should have direct encouragement from the masters, by becoming a part of the regular study of the school?—Yes, exactly.

18. Otherwise, if it were simply voluntary, or extra, it would not fare much better than it does now?—Probably not.

19. Then you think that time would be sufficient?—Yes.

20. I presume that a great deal would depend on the power of the professor of communicating knowlege, whether that time would be sufficient or not. Probably you would not be inclined, supposing you were able to fix upon the change that should be made, to require that there should be a regular professor of natural history resident in the school, who should be able to take pupils, and to resolve any difficulties that occurred to the minds of the boys; in short, that he should be a permanent part of the establishment?—No; I do not think that would be requisite. I believe that if a well-qualified teacher or professor were to visit a public school at any season that might be found most convenient, and reside for such a time as would enable him to go through his course of lectures, during the proportion of the year which I have suggested, it would suffice.

21. You would prefer his being resident at the place, and being in a position to be referred to, rather than that he should come down from London, be in attendance for an hour, and then go away again, as I believe is the case at Eton?—Great benefit would be derived by an uninterrupted demonstration of the subject-matter selected, during the season allotted to that purpose: by uninterrupted, I mean that the teacher should give his lectures at a fixed hour every day, for at least five days in the week, during the continuance of the course. The railroads and other conveniences for travelling might make it easy to go to and fro, and I am not certain that it would be absolutely necessary for him to be resident. But it would be better if he were in the way to give those who might be disposed, out of school-hours, to examine the specimens or diagrams, the requisite explanations.

22. Then, as a general deduction, you consider that youths would find, in the study of natural history science, a good school, first of all for self-instruction, as well as for instruction acquired from others, and for that self-education which induces a man to examine himself, because those qualifications that he would have to obtain would require much self-education?—Certainly.

23. And, as far as your observation goes, you think there is a great deficiency in that respect at present?—There is apparently an entire deficiency of instruction in the elements and methods of natural history.

24. And you think that, with respect not only to those who are actually at the public schools, but the men who have gone through both public schools and universities, those qualifications have not been obtained?—No.

25. Have you observed that more attention has been called to physical science, and to the subjects of which we have been speaking, at proprietary schools; for instance, at middle-class schools is more honour done to physical science than at the public schools?—My experience does not go much beyond King's College, University College, and the arrangements there, so that I am perhaps not qualified to speak of the progress of elementary teaching, or natural history teaching elsewhere. I do not know what has been at work in proprietary or large private schools. I believe that some progress in that respect has been made; but I do not know enough of the matter to speak with any degree of certainty on the subject.

26. Are you aware that at the London University there is a considerable amount of elementary knowledge in physical science required before matriculation?—Yes; it seems to be rather comparable with the present university system than the public school system.

27. (*Mr. Thompson.*) It is only for matriculation?—Yes.

28. Which implies that it has been taught at school?—Yes.

29. (*Lord Clarendon.*) You say, that having given anxious attention to the subject you have taken the opportunity of communicating with the masters of different public schools?—I have been in occasional communication with them.

30. Have you found any indisposition to recognize the importance of natural history and physical science?—No, none; the difficulty has appeared to me to consist in their not seeing the way of fitting in the natural history teaching with the system now in operation.

31. But there was no objection to it if it could be so interwoven?—No, no objection to it; but I should say that there was unmistakeable evidence of a want of appreciation of its value as a training instrument.

32. Do you think that there would be any unwillingness to adopt some improvement in the system, that is to say, that although the value of physical science might not be appreciated, yet that it might be recognized as forming part of the requirements of the present age?—If the method of imparting that

elementary information was systematic, and shown to be effective on some settled plan, and if it was seen that no more time was asked than could be spared with due regard to the old teachings; as, *e.g.*, for zoology, one hour a week during six months; and if the masters could see their way as to how it could be done without undue disturbance of the present system, I do not think there would be any active obstacle interposed on their part. I think the natural history would be received, although I do not know how far it would be willingly received. It would, however, be essential to have it methodically estimated and provided for.

33. The chief practical objection that we have heard is the want of time?—I think that is the main one that I have heard raised.

34. You see no reason, however, to think that upon that ground there need be any objection?—No.

35. (*Lord Devon.*) You used the term "proper "age," what age should you consider the proper age for the commencement of studies, such as those of which you have been speaking?—From 15 to 16.

36. I apprehend that you would not apply it to the junior classes in the public schools?—No, not to boys much under that age.

37. We have had remarks made to us as to the importance of bringing out and developing the faculties of observation at a much earlier age than that. Probably in your judgment that would not apply to the sciences to which you have made special reference?—To have sufficient knowledge to enable one to speak with anything like value or authority on that point, one ought to have experience in the teaching of youths. Now I have not had that experience. My teaching has been of the adult class, so that I do not wish to assert an opinion as to age, which some may have better grounds to pronounce on than I can pretend to.

38. Would you be prepared to express any opinion as to the advantage of teaching chemistry in the public school system?—Chemistry is a good subject to be taught. It induces, in the first instance, dexterity and nicety in the use of the fingers, besides caution in making a comparison of experimental results. No doubt there are useful faculties of the mind brought out well by chemistry. At the same time there are the practical difficulties of the apparatus for experiments, and if I were to refer to age in regard to the teaching of natural science, I should be induced to raise the age in reference to the applicability of chemistry as a disciplinary science. The elder boys would be more careful and less mischievous, and therefore more likely to obtain a benefit from the laboratory in chemical teaching, without being so subject to its accompanying evils. I do not, however, on the whole, look on that study with so much favour as the methods of natural history, as an adjunct to the exercises of the memory in boys' schools; but at the same time I am not blind to the advantages attending it.

39. You are aware that an impression exists, that in the public school system there should be introduced the teaching of modern languages, natural sciences, music, and so on. Should you be prepared, or feel inclined to give us an opinion as to the comparative importance of the introduction of these subjects?—The modern languages I should be disposed to place first in importance, natural history next, chemistry last. With regard to astronomy and mechanics, these I think, are already in part provided for in the illustrations of geometrical and algebraic teaching.

40. Then do I understand you to mean that, in regard to each of these, except, perhaps, modern languages, you would not commence their introduction until the boys had attained the age, say, of 15?—From my present experience, I should say, that with respect to natural history, 15 would be a good age to begin. The pupils of Liebig are usually older.

41. (*Lord Lyttelton.*) With respect to the objection which you, no doubt, have often considered, as to the effect of introducing a large amount of natural history or other matters, before the age of 15 or 16, are you clear that it would not, in any degree, injure the faculties in the way which has been illustrated by the example of the beating out of gold leaf; that is to say, that in proportion as you extend the area of the boys' instruction, you would, in a similar degree, diminish the depth and solidity. You do not apprehend any danger of that kind?—No; not in regard to the proportion of natural history instruction which I recommend.

42. Have you found that objection to exist in the minds of any of the masters?—At the first blush, upon the introduction of the topic in a general way, I have; but I think that if natural science was systematically taught, and the masters found that as much of it as was necessary, as a training instrument, could be given in one hour in the week during part of the year, they would not consider such objection to be valid.

43. (*Sir S. Northcote.*) You spoke of one hour a week, but you spoke also of a resident teacher who might give a lecture every day. I presume that is with the view of taking a certain number of boys each day?—Yes; in groups, so that not more than one hour a week should be taken from each boy's ordinary school studies.

44. What do you consider would be the largest number of boys that a teacher could very well take in a class?—For the amount of elementary teaching that would be useful for a boy I should not suggest a class beyond 50. I think that a room that would allow 50 to hear and see, and to whom might be addressed questions after the demonstration, and followed by explanations, where the youths had not quite comprehended what was said in the lecture would be large enough. I think 50 is the outside that should be dealt with at a single lecture.

45. You contemplate, I presume, something more than a mere lecture, something in the nature of a lesson as well, in which the boys could ask questions, both with reference to the lecture then delivered and to the previous lectures?—I referred just now to what has been my general experience in teaching, but there was one exception. I was honoured by a request from the late Prince Consort to lecture to the Royal children, and I devoted three-quarters of an hour to lecturing and explaining the diagrams, and the other quarter of the hour to answering questions and entering into explanations, which seemed to add much to the instruction aimed at. I must add also, that in these questions I was ably aided by the Prince Consort himself, and in this way we found out every point that had been misunderstood or not comprehended by the Royal children.

46. (*Mr. Twisleton.*) Were all the Royal children present?—On one or two occasions they included all except the youngest.

47. (*Sir S. Northcote.*) I understood you to recommend the introduction of this study chiefly for the purpose of disciplining the mind. Now, do you suppose that the qualities of the mind which are called out by the study of natural history are those which would be practically available for boys in after-life in prosecuting all the physical sciences. What I mean is this: Supposing a boy to have had a training in natural history, will that be of great advantage to him in after life in taking up chemistry, or geology, or any of the physical sciences, although he may not have paid attention to those particular sciences in his youth?—It would be essential to geology. It would not apply so much to chemistry. The value of teaching natural history science would be in improving the powers of observation and enabling the mind to grapple better with all the ordinary business of life, so far as the faculties of arrangement, classification, and order are concerned.

48. Even in the study of chemistry would not these qualities be useful?—No doubt; but when one imagines a youth taking to the study of chemistry, it

GENERAL EVIDENCE.

Richard Owen, Esq., F.R.S.

19 Nov. 1862.

implies a mind with innate aptitude for that kind of scientific research, and I conceive its methods and procedures to be too abstract and refined for use as elementary training of great assemblages of boys for the purpose of improving them for the common purposes of life.

49. The object of my question is this: Assuming that it is impossible to teach boys at school everything, without in fact teaching them nothing at all, I want to see whether we can fix on any one study which will be proper for the development of those faculties which will be required for natural science generally, and I want to know whether you consider the study of natural history would be a substitute for, or rather would be taken as the representative of all that class of science, so that it should not be necessary to have a special education in the other branches of natural science also?—I think the uniform practice in the Continental schools where natural sciences are taught, is to begin with natural history. The students learn the elements of botany or zoology first before going to chemistry and the higher sciences, which seems to give an answer in the affirmative to your question, so far as that natural history as a disciplinary science is the best calculated to impart to the scholar qualities which will be found useful in enabling him to pursue more difficult studies afterwards.

50. Reference has just been made to the matriculation examination for the University of London. We know that those who come up for matriculation at the age of 16 are expected to have a general knowledge of the elementary part of chemistry, and also of many other subjects; but they are not required to have any knowledge of natural history. We were told by a gentleman who represented the University of London that that was done deliberately, and that it was thought that chemistry should be taken at a much earlier age than the science of natural history. In your opinion that is inverting the proper order, and the science of natural history should be taken first?—It would be an entire inversion of the practice of the German and French great educational establishments. I think, without exception, the classes that have the youngest students in physical science are those which are taught natural history.

51. Would you propose to introduce natural history into all the schools, or do you think that different subjects should be taken up at different schools; that at Eton, for instance, they might pursue the study of natural history; at Rugby, the study of chemistry; and at other schools, the study of other branches of natural science. Do you think there would be any advantage in that, or should you prefer to take natural history in all if necessary, and omit chemistry in all?—I should be sorry to advocate natural history to the entire exclusion of chemistry or natural philosophy; but I do not think it would be wise to omit natural history in any great school and consider chemistry as its substitute, chiefly on the grounds before stated; and partly for this reason, that in every community of 200 or more youths, there must be some few, the constitution of whose minds is specially adapted to the study of natural history, to the work of observation and classification, who consequently are impelled by innate aptitude to that kind of study, but who are not at present afforded the slightest opportunity of working their minds in that way; so that it may happen that the faculty or gift for natural history, if it be not actually destroyed by exclusive exercise in uncongenial studies, is never educed. What is the result? In all our great natural history movements we have looked in vain, since the death of Sir Joseph Banks, for any man having a sufficient standing in the country to fraternize with us, to understand us, to help us in debate or council in questions most vital to the interests of natural history. It has often occurred to me to ask how such should be the case, and my answer has been, that in the education of the noblemen and gentlemen, the great landed proprietors of England, of those destined to take part in the legislation and government of the country, there has been complete absence of systematic imparting of the elements of natural history, no demonstrations of the nature and properties of plants and animals, no indication of the aims and importance of natural history, no training of the faculties for which it affords the healthiest exercise; consequently they have not been educed. I cannot doubt that this must have been the effect of the present restricted system. There must have been by nature many Sir Joseph Banks since he died, but they have been born, have grown up, and passed away, without working out their destined purpose; their peculiar talent has never been educed, their attention has never been turned to those studies, but they have been wholly devoted to classics. It must be remembered that minds of this class are usually very averse to classical studies and mere exercises of memory and composition; they never take to them; they get through them as well or as ill as they can, doing little or nothing to the purpose, and they fail to achieve that for which they are naturally fitted from the want of having their special faculties educed. I consider it a loss to the nation that in our great educational establishments for youths there should be no arrangements for giving them the chance of knowing something of the laws of the living world and how they they are to be studied.

52. What I want to ask in the first place is in regard to the discipline of the mind. I quite understand you to say, that if a boy in his younger years fails to have his mind exercised by observation his powers will not be developed; but I want to know whether you consider natural history alone to be the proper mode of training the powers of youth in physical science, or whether another science, such as chemistry, could be substituted for it in some cases?—No; chemistry would not educe so well the faculties of classification; it would educe powers of a different character and perhaps of a higher degree of value.

53. You would not think that a boy who studied chemistry would possess an advantage over a boy who had not studied chemistry, when he came to the study of natural history?—I cannot say. It might; but I do not know how that would bear on the first question.

54. The object I wish to arrive at is this: It is impossible that a boy can be taught everything at school, and I want to know whether your mind receives this idea, that there should be schools at which natural history should be taught to the pupils, the subject of chemistry being set aside in those schools; while there should be other schools in which chemistry should be taught, so that if a boy were known to have a special aptitude for natural history he should be sent to Eton, and be well trained in that, rather than that he should be required to go through a course both of natural history and chemistry, and thus acquire probably a superficial knowledge of both?—The knowledge of both sciences would necessarily be superficial in any case; but the training benefit to the mind in giving that superficial glimpse of the science would be secured. The elements whether of chemistry or zoology would be tauught as educational instruments. One might succeed the other during the proportion of the year set apart for natural science; but, for reasons already given, I think it would be disadvantageous to supersede natural history by chemistry at any school.

55. I do not know whether you are acquainted with what is called the system of bifurcation in foreign education; that is to say, that boys are taught up to a certain point in all matters in common, and that after a certain point those intended to pursue a literary course take one line, and those who study mathematics and natural science take another. Are you acquainted with that system?—Not at all; but it seems to be a good one.

56. Would you propose or approve of the introduction of that system into public schools, and allow a boy of 15 or 16 years of age to drop a certain portion

of the work and undertake natural science, while other boys would not undertake natural science at all; or would you prefer that they should all go on through the old school-boy course up to 17 or 18 years of age?—I think they ought all to go on together until about the age of 15, and that it would be better not to divide work into particular channels of education until experience had been had of the working of the more simple method of adding the elements of natural history to the old school-course.

57. I suppose you would not think it right that the same teacher should undertake more than one branch of natural science; for instance, that a teacher should undertake to teach natural history and chemistry as well?—I should think not.

58. But that different branches of natural history, such as zoology and botany, might be undertaken by the same man?—Yes.

59. Do you think there would be much difficulty in getting teachers, say for the seven or eight principal schools of the country, to undertake that work?—I am afraid at the present time that there would be, arising from the general defects of our teaching arrangements, especially the want of systematic teaching of the elements of natural history in schools. We are all of us, as it were, naturalists by accident. It is the perception of that difficulty which has led me, on every occasion when I have been called upon to give evidence on the subject, to urge the giving of elementary instruction on natural history as one of the duties that should be attached to the keeper of each secondary or subordinate department in great national museums of natural history. In them there may be a gentleman who has charge of the shells, a gentleman who has charge of the birds, another who has charge of the fishes and reptiles, another who has charge of the mammalia; the especial care of the secondary groups may be respectively confided to some one gentleman who has consequently a profound knowledge of this class, and may have studied it for a long period of time. Now, if with his conservative duties he had to give 12, or at most 24, public lectures on that branch of his science once a year, I am quite sure that he would greatly benefit himself, while at the same time he would greatly benefit his collection and the cause of education; and although he might not have a very large class, because that would depend on his power of speaking, and so forth, he would always secure an audience, such as I have seen at the *Jardin des Plantes*, at Paris, of some half a dozen young men adapted by nature to do good work in the progress of the science; and in this way we should raise up persons who possessed just the capacity necessary to supply the want you are speaking of.

60. He would give those lectures in courses?—Yes; I look forward to the establishment of an organization of that kind, when a museum for the display of the national collections of natural history may be formed, which, I believe, would benefit the nation very greatly, and especially those who were professionally engaged in teaching natural history.

61. You look to such lectures as those for the formation of a class of teachers for the public schools?—It would be a great help towards it.

62. But at the present moment you think it would be difficult to get them?—I should be sorry to speak confidently on that point. There has been more teaching in natural history in colleges and universities than there used to be; but, at the same time, if I were asked to recommend a teacher who would combine the qualities that are necessary to teach boys, I should have some difficulty in doing so; for boys are a difficult class to deal with.

63. Of course, it would be more difficult to find the requisite number of teachers for eight or nine schools than for one?—Yes.

64. Do you think one man could undertake different schools, or should the teachers be resident, or be there every day. I understood you to recommend, when you were speaking of a single school, that there should be a resident teacher to teach a class every day; but when we have to consider the wants of eight or nine public schools, I should like to know whether you think it would be desirable that we should try to get eight or nine different men, or try to introduce some system by which the services of one man should be made available at different places one after another?—Supposing the elementary instruction in natural history to be one hour a week for each pupil, and that the teacher should attend five days in the week, for successive classes during six months in the year, it would not be requisite that he should reside more than that period at the school or in the vicinity; and that necessity would depend on the vicinity of the school to London; for instance, at Eton he might, by means of the railroad, be there once every day, and still live in London.

65. When you say one hour a day, do you suppose a man could give two lectures in a day to different classes?—He might do so very well.

66. That would economize the time; he might take two classes a day?—Certainly.

67. Supposing that system of boys taking one subject one year and another another year could be introduced, it might be arranged that the chemical professor should take up his abode at Rugby, for instance, for six months, and the natural history professor at Eton for a similar period. Might there not be an advantage derived in that way?—I have not considered the particular working of the question sufficiently to be enabled to answer that question.

68. (*Lord Lyttelton.*) Have you considered what time would be necessary in the school, in addition to the hour a week employed by the lecturer, for the incorporation of the subject into the work of the school; because I presume, that unless the boys' places in the school are to depend in a certain degree on their proficiency in the knowledge of physical science, that is to say, unless it is made a subject of compulsion, and not one of mere taste or feeling, the attempt would be futile; therefore, in regard to the different examinations in the subject, and the study a boy would have to give it in his own room, in order to render himself proficient, do you take into consideration what additional time would be required for it?—If the course of lectures on natural history were determined on, to be given in the proportion I have suggested, I have no doubt the lecturer would adopt or recommend a class book, something like the Eton grammar in reference to Latin and Greek, and I presume that the boys who attended his lectures would have such natural history class book, and would be expected to read the part marked out for them relating to the lecture or the demonstration. The class would be examined upon the book, and marks given for proficiency.

69. Does it seem to you that on the average the addition might be probably half as much time again; that is to say, that if you allow one hour a week for the communication of the instruction, about half an hour a week more would be requisite for preparation?—I think that might be enough.

70. (*Lord Clarendon.*) In reference to what you said about a class book to be placed in the hands of the boys, do you consider that there exist at present good elementary works, on which a teacher might rely for assistance?—No; it would be very difficult to select one to answer that purpose; the demand has not arisen, and, therefore, there is not the supply.

71. (*Mr. Thompson.*) It would not be difficult to write one?—They are more difficult than is generally thought. Good elementary books on science are very rare.

72. (*Lord Clarendon.*) In Germany, do you know any good elementary books, or in France?—Yes, they have good elementary books in both countries. In France, there is an excellent elementary work on zoology by Professor Milne Edwards.

73. Those books are not translated, that you are aware of?—I think I saw an advertisement of the latter; but it would be too bulky and comprehensive

GENERAL EVIDENCE.

Richard Owen, Esq., F.R.S.

19 Nov. 1862.

for the elementary teaching I recommend for the beginning of the proposed reform.

74. (*Sir S. Northcote.*) If boys were tolerably advanced in French, might they not use books in French when being taught physical science?—Yes.

75. (*Mr. Twisleton.*) I think you approve of the plan of beginning with the sciences of observation, and concluding with the sciences of experiment?—Yes.

76. With regard to the sciences of observation, we have had evidence as to botany that boys might be well taught botany at 12 or 13 years of age?—I have no doubt of it.

77. If a boy were well taught botany his faculties would be sharpened and he would be prepared for zoology?—Certainly.

78. You were speaking of the German gymnasia; are you aware that they begin with the sciences of observation from 10 to 13 years of ge?—Yes.

79. You would not object to our beginning sciences of observation at 12 or 13?—No. In our case the experiment has not been tried, and random shots at a proper age can be rectified by the results.

80. In regard to the sciences of experiment, you are probably aware that at school it would be out of the question to teach boys generally in a laboratory?—I presume the difficulty would be extreme.

81. So that dexterity and neatness of hand could hardly be attained by the boys of a school generally?—They have too many ways of their own for the improvement of the neatness of manipulation to require chemistry for that purpose.

82. In regard to physics and chemistry I presume the knowledge that could be communicated to boys at school, would be in accordance with the facts discovered by others and with all the natural laws of the objects which surround them?—Yes.

83. That would be useful to a boy, independent of his experimenting himself?—Certainly.

84. You were educated, I believe, yourself at a classical school?—Yes, an old-fashioned classical school. Our master had been an Eton man.

85. Have you observed at school and in life since that there are three distinct types of mind, that some boys have a predominant turn for languages, others for mathematics, and others for the sciences of observation and other natural sciences?—Those are the three principal distinctions that one observes in all schools, no doubt.

86. Taking a school like Eton, where there are 800 boys altogether, can you entertain any doubt that there are many boys in that school whose predominant type of mind is for the study of natural science?—I have no doubt of it, and I have had complaints uttered to me by gentlemen who have been educated at Eton, and have afterwards under consequent disadvantage and difficulty followed their own bias in favour of the natural sciences, and who have regretted deeply that they never had any opportunity of learning the elementary principles of natural history.

87. Do you not think it is a great hardship to some boys that they have to remain at school perhaps till 18 years of age, without receiving any instruction on those subjects for which they have a natural aptitude?—I think it not only a hardship but an injury.

88. (*Mr. Thompson.*) You say that many of those sciences are in a progressive state?—Every science we are acquainted with is one of progress.

89. But the principles of some of the sciences are determined, such as those of mathematics, for instance?—The fundamental principles of classification in natural history are as certain.

90. Take this case: Fifty years ago, supposing zoology to have been taught in schools, would not the Linnæan system have been adopted?—You might teach the main part of that system, in reference to botany as a disciplinary science, at the present day.

91. I was thinking of the study of zoology?—In zoology, although of course there has been a great increase in the knowledge of the structure of animals since the time of Linnæus, still the principles laid down in Linnæus' immortal work, the "Philosophia Botanica," are really those that cannot be deviated from, whether the elements of zoology or botany be imparted.

92. You do not think there is any objection to the educational use of the physical sciences, in consequence of the fluctuating or speculative character of those sciences?—I deny the "fluctuating character;" it is not applicable to natural history. The zoological system of Ray is the basis of the system of Linnæus; it forms an essential part of the Linnæan system. There is neither fluctuation nor speculation. The principles of natural history are already as settled and fixed as can be needed for its use as a disciplinary science. Modification of details would never affect its value in relation to elementary teaching.

93. The zoological classifications of the ancients were somewhat puerile, were they not, even the classification of Aristotle?—No; it is surprising how much of Aristotle's system is really retained, how much is founded on truth and is the basis of the modern classification.

94. Plato was the first writer on classification, I think; Aristotle is very severe on him, if I remember rightly?—I am not sure. But the improvement that Cuvier made in the zoological system of Linnæus was mainly a revival of the Aristotelian principles, because Cuvier was the first modern systematist who had anything like the same amount of knowledge of the structure of animals which that wonderful man Aristotle possessed.

95. (*Mr. Vaughan.*) I suppose that in reference to the point on which Professor Thompson has just been speaking, it is the case in all but the most abstract sciences, in all branches of human knowledge, that there is some change of a progressive nature in the truths that are enunciated?—The amount of change, as affecting the great body of the doctrines, of course varies with the state of our knowledge.

96. I suppose that if we were to wait in order to teach the subject until we entirely escaped the possibility of there being some change in the form and substance of the truths taught and the method of teaching the truths that are taught, we should have to wait for ever in all sciences, should we not?—We should certainly have to wait for the termination of our existence as a species.

97. (*Mr. Thompson.*) Not with respect to arithmetic, for instance?—In Transactions of Societies and Academies of the Natural Sciences we see annual progress and discoveries in mathematics: the sciences in regard to the works of nature or of the Author of nature are more incomplete; and the more we know of them, the more we get impressed with the small amount of knowledge we possess. But that amount, compared with ignorance, is so great, and the principles that we are enabled to educe from the little that we do know, are so sure, that taking them at the present very imperfect standard, whether in respect to zoology, or botany, or geology, they are as good for the purposes of elementary instruction and discipline as they will perhaps be ten thousand years hence.

98. (*Mr. Vaughan.*) I do not know whether you have turned your attention to the subject sufficiently to make the comparison, but for a moment, to draw a comparison between natural history and civil or political history, would it not be the case that there has been as much change in the facts taught or advocated as that which should be taught in civil history,—in the history, for instance, of Rome or Greece,—than there can possibly have been in natural history within the same time?—It may be so, but the subject is rather out of my line.

99. In speaking of the advantages to be derived from natural history as a discipline of the mind, you have spoken chiefly of the co-ordination, the classification of facts, and the arrangement of topics. I

suppose that you do not intend to limit the discipline and the advantages that are to be derived from other physical sciences to those particular points?—No.

100. You think that there may be several other advantages that might be derived from the several physical sciences, rather peculiar to them, but very valuable as gymnastics to the understanding?—I may just mention another advantage arising from natural history as compared with other sciences, namely, that it expressly teaches and largely illustrates the teleological principle, or the adaptation of means to ends. Every character we should assign to each division of the animal kingdom would be drawn from the structure, which would show the peculiar purposes of each particular portion, and the adaptation of the whole structure to the particular ends for which the animal was created; and this characteristic of natural history science would leave upon the mind an impression that could not fail to lie at the bottom of an amelioration of the moral character.

101. In chemistry, for instance, I suppose there might be many actions and powers of the mind that might be cultivated especially by that branch of science, for instance, the appreciation of cause and effect?—Yes.

102. Do I have your consent to that?—Certainly.

103. And as the arrangements and classification of visible structure would be taught by natural history, so the arrangement and co-ordination of physical powers would be taught particularly by chemistry?—Especially so.

104. There is another point upon which I should like to have your opinion, which is a practical matter entirely with reference to natural history and physiology. Has it occurred to you to observe whether persons in the upper classes of society and other members of society are well or ill acquainted with the physiological laws of the human structure?—No; it is a knowledge very rarely possessed, as far as my experience goes, very rarely indeed; and I believe that it is chiefly upon that general ignorance that the success of spurious systems of medicine have their dependence. It is upon the general ignorance of the population that the empiric bases his pretensions, and has an influence for a certain time, till one subsides and is succeeded by another.

105. In regard further to the prevention as well as the correction of mischief, may I ask whether the prudential teachings of physiology do not concur with the teachings of morality in general?—Most closely.

106. They most closely concur?—Most closely.

107. Supposing, therefore, at an early period before entrance into life, youths were made acquainted with the physiological laws which regulate the animal frame, and, indeed, the intellectual constitution to a certain degree; do you think that would have a beneficial effect partly upon their moral conduct and partly upon the general control and government they should have over themselves as organised beings?—I should think it would upon some natures.

108. You think it would not be universal?—I think that many would disregard it. Under combative or other excitement they would care nothing about whether their hearts beat so many times a minute, or whether their brain were so few lines from the skull. I am afraid that though a certain proportion might listen to physiological teachings, there would be few on whom it would have any practical effect. On some natures it might tell.

109. Even with regard to the rules of temperance and chastity, would not the teachings of physiology have a good effect in giving a new sanction to those rules?—It would give some sanction, but such effects as you allude to, I believe, would mainly depend upon other and higher grounds of teaching and upon example.

110. Do you not think it would strengthen the force of other teachings by disclosing other reasons for them?—The truth is that anything I could say on that topic would not be very profitable. Of course I have had a good deal of experience in medical schools, and so on. There are other and higher teachings upon those points; and besides, you must revert at last to the individual nature. I think the mere knowledge that a quantity of alcohol put into the ventricles of the brain must damage the organ, would have very little influence over a man who likes to enjoy the stimulus. If he will not forbear from higher motives, he would not care a straw about the prospective result to the brain. It is the same with respect to other points of physiology. No doubt, any little good that can be gained is worth trying to be gained, and if you benefit but a few, it is better than none at all.

111. You do not think the tendency it would have, before any evil habits can have been formed, to disclose the destructive character of vice or excess upon the frame would be perceptible?—I should not be very sanguine as to the moral effect of physical teaching in any great degree.

112. (*Lord Lyttelton.*) In reference to the tastes of the boys in a large school, and the different bias they have, with respect to fixing the curriculum of the school, is it not necessary to go by our own judgment of what is best, because differences of taste among 800 boys would be very much greater than could be met by any arrangement of their studies. We must go, after all, by what we ourselves consider important?—To the extent of not allowing a study of secondary importance to interfere with a primary one. A good deal would depend on the relation of the Head Master and the other masters to those outside teachers, if we may call them so. If the Head Master entered confidentially into communication with the teachers of natural history or other sciences among the boys, and inquired who showed an interest in the subject, he would hear from the lecturer that so-and-so had a very remarkable aptitude and came and asked questions, so as to make it evident that he considered such instruction a great boon. Now this pupil might prove to be the boy who was so stupid with his nonsense verses, or other tasks of memory and composition; and the classical master might consider whether it would not be better to take a different course with reference to him and give him a greater amount of credit for the possession of those attainments of which he was capable, and make a less demand upon the boy in other respects.

113. The introduction of a variety of studies into a school must be according to our own sense of their relative importance, and not with respect to the taste of the boys, because these would be so numerous as to introduce a variety that no one would advocate in any school?—That might be so, were the attempt made to meet every taste.

114. (*Lord Devon.*) I think that I understood you to say, that you considered that the sort of instruction that can be given by professors, say for an hour a week to each class by competent men, would be productive of considerable good; but that to follow that out, there should be resident on the spot, and easily accessible, some person to direct the boys' reading, or to answer any questions that might arise. Do you think it likely, from the experience you have had of gentlemen of that class, that those who undertake the office of assistant master in different public schools, with university distinctions, would be competent to fill that subsidiary position, or would be likely to work with the professors who came?—Since the establishment of the physical sciences tripos at Cambridge, and the museum of natural science at Oxford, I think resident masters possessing the requisite attainments would be found quite competent.

115. Do you think it would work well if a gentleman could be obtained to come and deliver lectures, and his services were supplemented and assisted by resident gentlemen connected with the general study of the school?—Yes.

116. You think that not unlikely?—In reference to the conclusion to which I have come in regard to the importance of natural history as an element of school instruction, and the time to be given to it in beginning the experiment, I would ask leave to read

GENERAL EVIDENCE.

Richard Owen, Esq., F.R.S.

19 Nov. 1862.

a passage from the address of a gentleman who fills a very eminent position, that of local director of the Geological Survey of Ireland, and Lecturer on Geology to the Museum of Irish Industry, Mr. J. B. Jukes, who, in opening the business of the Geological Section of the British Association, over which he presided at Cambridge, made these remarks:—"The natural sciences are now considered "as worthy of study by those who have a taste for "them, both in themselves and as a means of mental "training and discipline. In my time, however, no "other branches of learning were recognized than "classics and mathematics, and I have with some "shame to confess, that I displayed but a truant "disposition with respect to them, and too often "hurried from the tutor's lecture room to the river "or field, to enable me to add much to the scanty "store of knowledge I had brought up with me. "Had it not been then for the teaching of Pro-"fessor Sedgwick in geology, my time would have "been altogether wasted." So that it was just the accident, so to speak, of one short course on a branch of natural history, grafted through an old bequest upon the main studies of his university that led Professor Jukes to his appreciation of the method of study and value of the science which owes so much to his labours. I could also, with your permission, adduce a higher authority on the main point, and that is Baron Cuvier's, who, in the preface to the first edition of his elementary book on Natural History, expresses himself as follows:—"The habit necessarily "acquired in the study of natural history, of mentally "classifying a great number of ideas, is one of the "advantages of this science, which is seldom spoken "of, and which, when it shall have been generally in-"troduced into the system of common education, will "perhaps become the principal one; it exercises the "student in that part of logic which is termed "method, as the study of geometry does in that "which is called syllogism, because natural history "is the science which requires the most precise "methods, as geometry is that which demands the "most rigorous reasoning. Now, this art of method, "when once well acquired, may be applied with in-"finite advantage to studies the most foreign to "natural history. Every discussion which supposes "a classification of facts, every research which "requires a distribution of matters, is performed "after the same manner, and he who has cultivated "this science merely for amusement is surprised at "the facilities it affords for disentangling all kinds of "affairs. It is not less useful in solitude; sufficiently "extensive to satisfy the most powerful mind, "sufficiently various and interesting to calm the "most agitated soul; it consoles the unhappy, and "tends to allay enmity and hatred. Once elevated "to the contemplation of the harmony of nature "irresistibly regulated by Providence, how weak "and trivial appear those causes which it has been "pleased to leave dependent upon the will of man. "How astonishing to behold so many fine minds "consuming themselves so uselessly for their own "happiness and that of others in the pursuit of vain "combinations, the very traces of which a few years "suffice to obliterate. I avow it proudly, these "ideas have always been present to my mind, the "companions of my labours, and if I have endea-"voured by every means in my power to advance "this peaceful study, it is because, in my opinion, "it is more capable than any other of supplying "that want of occupation which has so largely "contributed to the troubles of our age."

The witness withdrew.

Max Müller, Esq., M.A.

MAX MÜLLER, Esq., M.A., called in and examined.

1. (*Lord Clarendon.*) I believe you are Taylorian Professor of modern languages and literature at the University of Oxford?—I am.

2. May I ask how long you have been so?—About eight years.

3. You have also been, I think, examiner for commissions in the army?—I have been examiner for the Indian civil service and the military service, and also, as Taylorian Professor, for the University scholarships in modern languages.

4. I assume that at Oxford you are in the habit of giving lectures?—I am.

5. Every term?—Every term.

6. What are the principal subjects on which you give lectures?—The literature of Germany and France, and comparative grammar or the science of language.

7. I suppose that both in your capacity of professor at Oxford, and of examiner in those different services you have had an opportunity of estimating the average acquirements of boys in French and German?—I have.

8. What is your opinion on that point?—I believe there has been a considerable improvement during the last years in the study of French and German.

9. What period do you include in the last years?—The time since the throwing open of the Royal Artillery and the Indian civil service to public competition. Ever since that time managers of public schools have exerted themselves very much to improve the teaching of modern languges. In the first examinations the results were anything but satisfactory; but I think that almost every year one sees the good effect which the throwing open of these services has produced upon public and private schools.

10. You would say that the present system of teaching at public and private schools has begun to produce some perceptible results?—Decidedly; and the lists of marks published every year in the reports of those examinations speak for themselves.

11. In the report of the examinations of the public schools do you mean?—No; the official reports of the examinations for the Royal Artillery and the Indian civil service. Of course, great allowance must be made for the small amount of time that is given to the study of French and German at all public schools. I think, however, that, considering the short time that is given to French and German in comparison with the amount of time that is devoted to Greek and Latin, the results have been very satisfactory. The teachers of French and German at public schools have to contend with great difficulties.

12. Have you been enabled to institute any comparison in different schools as to the proficiency of the boys they send out. You are aware that the inquiries of our Commission are directed to nine of the great public schools,—Eton, Harrow, Winchester, Rugby, Shrewsbury, Westminster, the Charterhouse, St. Paul's, and Merchant Taylors'. Have you had any opportunity of ascertaining whether improvement has been manifested in those schools?—I have not been able to do so, because in the examinations of candidates there is a number given to each, and I know neither their names nor their places of education; I only know the number, and I have to examine the papers, and report accordingly, without knowing anything of the previous education of each candidate.

13. That is in your capacity of examiner?—Yes.

14. In your capacity of professor at Oxford, have you any means of examining the boys who come up with reference to the efficiency of the teaching at the different schools?—No; but I have always found that those who know French and German well do not know it because they come from such and such a school, but because they have had special

advantages, either as being the sons of German or French mothers or fathers, or from having been abroad a considerable time.

15. Therefore you cannot trace any proficiency in German or French, in the young men of the university, to any particular teaching which they have received at school?—No.

16. But you would rather consider, that where there is proficiency, it has not been acquired at school?—Where there is great proficiency, that is to say, where boys are able to speak French and German, it has not been acquired at school. Those who carry off our scholarships at the Taylor Institution, are almost, without exception, either the sons of foreign parents, or else they have lived abroad a good deal, or have had other advantages, such as being the sons of ambassadors and so on.

17. I suppose your field of observation and comparison is narrow at Oxford, as between different schools, the attendance being voluntary, and therefore consisting principally of those who have a certain amount either of acquired proficiency, or who intend to make themselves masters?—Certainly.

18. So that you have no opportunity of observing and comparing the general mass of young men who come up from the great public schools?—Not so as to distinguish the schools from which they come. I could not say that a boy coming from Eton is better taught than if he came from Harrow; I have no means of forming an opinion upon that point.

19. You consider you have no means of forming an opinion as to the general proficiency of young men coming from Eton or Harrow?—Precisely so.

20. But you say, on the whole, there is a knowledge of modern languages, and especially of German and French?—Decidedly there is; considering the short period of time that can be devoted to it at public schools, I consider the knowledge, such as it is, very creditable. There are very few young men coming before me who are not able to read an easy French or German writer; as to speaking the language, and speaking it well, that is quite a different question.

21. About how many attend your lectures?—The number varies from three to fifty and more.

22. So that, with respect to the numbers who come up, the general mass who come up from the schools, your field of observation is narrow?—As professor it is narrow; as examiner it is a large one; for in the Indian civil service examination there are as many as 200 candidates every year, and for the military service I have to examine 8 times during the year, and I have each time on an average about 30 candidates. I also examine the cadets at the Royal Military Academies at Woolwich and Sandhurst, where young men come from other schools, so that I have had an opportunity, during the last eight years, of knowing the general average acquirements of the sons of the gentlemen of England in those branches of knowledge.

23. Though you may not know at the time for examination the names of the candidates, and the schools at which they have been educated, you probably have a subsequent knowledge of the matter?—Yes.

24. Do you know how many of the candidates of the East India service are furnished from those eight or nine schools which I have first designated?—With regard to the candidates for the Royal Artillery and Engineers, it is easy to determine this, for after the examination is over the names of the successful candidates are published, and their places of education. It would be more difficult in the case of the candidates for the Indian civil service, because many of them come from the universities; in the published reports only the last place of education is mentioned.

25. And should you say that many candidates for Woolwich came from Westminster, Harrow, Shrewsbury, Rugby, Winchester, and the other schools I have mentioned?—I think the reports that are published would answer your question much better than I could; but I should say from the general impression of those reports that about half the successful candidates come from our great public schools. It would, however, be easy to verify it.

26. Would you include Marlborough?—Yes, decidedly.

27. When you say, Mr. Müller, that there is considerable proficiency noticeable in German and French, it is only, I suppose, in reading, that is in the knowledge of the language?—It is in the grammatical knowledge of the language only.

28. The construction only?—Likewise in being able to translate an easy French or German book into English.

29. (*Lord Lyttelton.*) Not in writing in those languages?—Certainly not with any degree of fluency.

30. (*Lord Clarendon.*) In the construction of the languages?—In the grammar, and in a limited acquaintance with the dictionary.

31. I suppose you draw a great distinction between that and the facility and fluency of speaking?—Very great indeed. I find as a general rule that fluency in speaking is never acquired at any public school whatever. Whenever I find fluency in speaking, I can always trace it to an extraneous source.

32. I suppose you would think that it is almost hopeless to aim at fluency of speaking in a public school. The circumstances of the case will not permit of the boys acquiring it?—I have come to consider it quite impossible.

33. You are aware that in one or two schools an attempt has been made to acquire some fluency in speaking by the boys through the means of conversational meetings, and so on?—Yes.

34. And that they have not been attended with success?—I believe not.

35. I suppose there is no method which you could suggest by which fluency of speaking a foreign language could be acquired at our public schools?—No; and I think the experience of continental as well as English schools is against attempting to impart to schoolboys a conversational command of the language.

36. You say, the experience of continental as well as English schools; has the experiment been often tried by them?—In some of them the experiment has been tried.

37. And what have you heard has been the result?—I was brought up myself at a German school, and the experience there is exactly the same as in England, namely, that all that can be done during the short time that can be spared for the study of foreign languages is to give the pupil a good grounding in grammar, and the mastery of a sufficient number of words to enable him to read a newspaper, or an historical author in French or English. Beyond accomplishing this the German schools have certainly never succeeded.

38. (*Lord Lyttelton.*) Do you limit it to prose reading. Would you not include the power to read poetical works. I do not know whether you advisedly limit it when you say, that all they can do is to read easy prose works. Cannot they attain to the reading of poetry?—Not of difficult poetry. I am speaking generally, of prose.

39. (*Mr. Vaughan.*) Not even tragical poetry?——(*Mr. Thompson.*) Not Racine?—They read Racine. All, however, that I wish to say is, that when a boy leaves school he ought to be able to read for his own amusement or instruction an easy prose writer or an easy poet.

40. (*Lord Lyttelton.*) That is the general result?—Yes.

41. (*Lord Clarendon.*) You say you are aware that attempts have been made in Germany in some of the German schools or gymnasia to acquire or impart fluency in some of the foreign languages, especially, I suppose, English and French?—It has been attempted at the Real-schulen, not in the gymnasia, I believe.

GENERAL EVIDENCE.

Max Müller, Esq., M.A.

19 Nov. 1862.

42. And that the attempt has been a failure?—It has been a failure in regard to speaking.

43. What has been the result of your observations on the accent which young men acquire at public schools. I am not talking of those who have had particular advantages as being the sons of ambassadors or of foreign parents, but of boys coming straight from Eton, Harrow, or Winchester, and who have only learnt French there. What sort of accent do such boys come to Oxford with?—It depends very much upon the individual boy. Some boys have no ear for accent at all, just as some have no ear for music, and although they may hear a word pronounced by a Frenchman they cannot imitate it. There are other boys who have a knack for it, and their pronunciation is better, yet it is never good.

44. It is very much an affair of the ear?—Yes.

45. When once a bad accent is acquired it is extremely difficult to remove, is it not?—Almost impossible.

46. (*Lord Lyttelton.*) And would you not say conversely, that if a good accent is acquired by a boy in early life it is difficult for him to lose it?—If a boy carries on his French, yes; but I have known boys who spoke well in the nursery, who gave it up, and when they took it up again afterwards they experienced exactly the same difficulty as a boy who begins afresh.

47. Supposing that a boy, say, 10 or 11 years of age, when he first goes to school, to be in the habit of talking French nearly as well as English, do you think that, even supposing he left it off at school, he would lose it?—No, I do not think he would.

48. (*A Commissioner.*) A great many young men who leave these schools of which we have been speaking and come to Oxford, of course do not attend your lectures?—A great many.

49. Have you heard, either from themselves, their tutors, or their contemporaries, whether they also have acquired a certain amount of proficiency in modern languages, or is it only those who come to you?—I believe that the majority of men at Oxford are able to read an easy French book.

50. You would consider a knowledge of the classics to afford great facility to the acquisition of modern languages, would you not?—Very great indeed. I believe that a great deal of time might be saved in the teaching of French at public schools if it were grafted on the knowledge of Latin, which most of the boys possess.

51. The one would be an auxiliary and assistant to the other?—Yes, of course. There is no feature in the French grammar which does not find its explanation in Latin, and if the connecting links were clearly put before the pupil he would find that his knowledge of Latin enables him at once to understand the apparently new facts of French grammar that come before him. Thus two advantages are gained; instead of mere formal knowledge, it becomes, so to speak, a more real and intelligent knowledge. French would be not merely a mass of conjugations and declensions, but something which interests the mind, and the result would be that something else is obtained besides the mere acquisition of nouns and verbs. I certainly think that if a competent Latin master were to teach French, and constantly to put before the boys the fact that what seems new and irregular in French is perfectly regular if it is only properly traced back to Latin, a great deal of time and tedious work might be saved.

52. Are you aware whether any such attempt has ever been made to connect the two languages together at any school?—It was made in France in the year 1852. The Minister of Public Instruction recommended that there should be a class at public schools for teaching Greek, Latin, and French grammar together, and some school-books were published with that view. I have one here by M. Egger, a Member of the French Institute, in which the suggestions of the Minister were carried out. It is a book in which not only Latin and French, but in which Greek, Latin, and French are put together, and the general outline of the grammar of the three languages is impressed at once on the pupil's mind. As to Greek there might be some difficulty, but as to Latin and French the experiment speaks for itself, because French is only Latin in another form, and Latin is to a certain extent only French, if the connecting steps can be clearly shown by which Latin gradually dwindled down to French.

53. You consider that there would be a greater facility by that method, both of acquiring French and retaining it?—I believe so.

54. Are you aware how that system which was adopted in France in 1852 works?—I can only judge by the number of editions through which this little book has passed, and it has passed, I believe, through five.

55. What is the book called?—"Notions élémen-
" taires de grammaire comparée, pour servir à l'étude
" des trois langues classiques; par E. Egger."

56. Have you any means of judging how French is taught at our great public schools?—I have not.

57. What would be your notion of the way in which French could be taught at a good public school?—I think it should be taught grammatically by an Englishman, who has had opportunities, of course, either by travel or by birth, of acquiring a fair knowledge of French. I think he should ground the boys in the grammar of the language, but he should have an assistant who is a Frenchman, under his supervision, to read out loud to the boys, to dictate to them also, to give them every facility for acquiring any exceptional knowledge of the language, which either they or their parents might think it desirable that they should possess.

58. Why would you propose that the principal French master should be an Englishman?—Because I believe an Englishman knows what the boys know in Latin, and also knows the difficulties which an English boy has to encounter in acquiring a new language.

59. And, perhaps, you think he would be better able to maintain discipline?—Certainly.

60. And the respect of the boys?—Certainly.

61. But you would have the teaching of the pronunciation, and perhaps, the idiomatic part of the language, left to the French assistant?—Yes.

62. Would you propose that the French assistant should teach apart from the Englishman, or that they should act together?—I should wish that the English teacher should always be present while his assistant is teaching.

63. Would you apply the same system to German?—Certainly.

64. You would make no distinction between the teaching of German and French?—No, I should not.

65. Do you believe that a German teacher would have less difficulty than a French teacher, in maintaining discipline in the school, and in securing his being attended to?—I do not think that he would. Boys are sure to detect some national peculiarities in foreign teachers, and to turn them into ridicule. It is just the same in Germany. The English and French classes in German schools are never orderly. There is always a want of discipline.

66. (*Mr. Thompson.*) Would it be easy to induce a Frenchman of ability to accept the subordinate position of assistant to the English French master?—I think there would be no difficulty in getting competent men.

67. (*Lord Lyttelton.*) You mean of the inferior schoolmaster kind; not gentlemen?—No, I mean men of good education. If the French or German teacher was well paid and well treated, there would be no difficulty in finding properly qualified candidates for such an office.

68. Even in that subordinate position?—I should think so.

69. (*Lord Clarendon.*) How far would you desire to see the teaching of modern languages carried at school

under such a system as you have now contemplated, with an English chief and a foreign assistant?—It depends entirely on the time given to the study; I believe two hours a week is about the average.

70. The average that is sufficient, or the average amount of time that it is possible to give?—The average amount of time that it is possible to abstract from the amount of time absolutely required for other more important studies.

71. From other important subjects?—Yes.

72. (*Lord Lyttelton.*) Do you mean the amount of time that it is desirable to devote to modern languages, in your opinion?—No; the time which, as a matter of fact, it is possible to devote to them.

73. (*Mr. Vaughan.*) Do you mean two hours in school, or does that embrace the preparation of the school work?—No, two hours in school.

74. (*Lord Clarendon.*) You would not think that that is as much time as it was desirable to devote to the acquisition of modern languages?—If I had to plead the cause of modern languages only, I should ask for a much larger slice of time, but considering how many other important subjects must be taught in a school, I doubt whether more than two hours can be given for such a purpose.

75. You have thought only of what is attainable?—Yes.

76. (*Lord Lyttelton.*) Upon the present basis?—Yes.

77. (*Lord Clarendon.*) Assuming that time can be allotted to it, how is it to be employed; what would you aim at by its being taught in school with other branches?—I would aim principally at securing an accurate knowledge of grammar, and secondly, a sufficient amount of reading to enable a boy after three or four years to read for his own amusement; but I should not attempt fluency in conversation or the attainment of a perfect accent.

78. You admit however that if an incorrect accent is acquired early in life it is extremely difficult to divest oneself of it?—That is true, but it is an inherent difficulty; and after all, French spoken intelligibly and grammatically, though even with a bad accent is better than no French at all. I have never yet seen a boy who has acquired a good French or German accent at a public school, though he was taught there by the best foreign masters that could be procured.

79. (*Lord Lyttelton.*) Do you not assume that they begin to learn French at the school?—Yes.

80. Is not that wrong. Ought they not to be grounded in it before?—I suppose the schools must look to the average of boys and not to exceptional cases. If there are any boys who have not learnt French before they come to school, elementary instruction must be provided for them.

81. (*Lord Clarendon.*) That would not be necessary if there was a preliminary examination in French before they entered the school?—That would be a great advantage.

82. And the sooner a boy began to be taught the better?—It would be a great gain.

83. There could be no sort of reason why parents should not be compelled to have their boys taught French before they come to Eton. You would see no objection to giving those boys instruction so as to enable them to read with ease and satisfaction to themselves, and you would like to make that instrumental towards acquiring other knowledge, such, for instance, as that of modern history?—If possible this would be a most excellent plan.

84. So that a double object might be gained in that way?—Certainly, and in modern history classes it would be possible to use French books.

85. Do you consider that the school books now in use at the great public schools are of a good character, and that they answer their object?—I think they are, generally speaking. I have seen most of them. Of course generally each master has his own book, or the book of a friend, but I do not think it is desirable to interfere, because each master must know best himself with what grammar he can teach best. I have been sometimes asked by the Council of Military Education to give my opinion of the grammars used at Woolwich and Sandhurst in consequence of new masters recommending new grammars; but I have always recommended that whatever particular grammar a master used he should be permitted to continue using, because he must know best with what grammar he can teach best.

86. Should you say, from your great and extensive knowledge, that there is a good French grammar?—Yes, I know several that I consider good, but it would be rather invidious to mention them. On the whole the shorter a grammar the better.

87. Do you think there is a good Latin grammar?—Yes, in German I know one, which is translated into English—Madvig's.

88. (*Lord Lyttelton.*) You mean good for school purposes?—Yes, for school purposes.

89. With regard to the general question of learning languages, assuming as we do, that the study of the laws of language and the scientific study of language is of great importance in early education, do you agree in the opinion that language is better studied in Greek and Latin than in any other language?—I do.

90. As being a dead language, it is complete and definitely scientific?—Yes.

91. With respect to the power and habit of speaking French fluently, that is to say, the habit of speaking it fluently apart from the accent, I understood you to say that such a power could not be acquired at school. But assuming that a boy can speak it sufficiently well before he goes to school, do you think there is any difficulty in keeping up that habit at school?—There ought to be no difficulty.

92. Enough to keep it up; not to improve it, but to keep it up?—I was going to say that if parents desire that a boy should keep it up, the school should provide teachers for private instruction. But these are exceptional cases, and they would not apply to the whole mass of the boys at school.

93. Suppose you cannot get much time to do it, a boy who is eight or nine months at school will not be able to improve his powers of conversation. Supposing a boy can speak it well before he goes to a school, he ought not to lose the power of speaking it by going to school?—I do not think he would lose it, because if he went back to France, although for the first three or four weeks he might think he had lost it, it would soon come back to him again.

94. With respect to combining the study of some subjects with the study of French, using French as an instrument of learning other subjects, is it not an advantage that in almost all subjects that boys could be taught in there are good books in French to be used as class books?—I believe the French school books are very good.

95. (*Mr. Thompson.*) You stated that a knowledge of Latin was useful in learning French?—Yes.

96. Is it your opinion that a knowledge of French is useful in learning Latin?—It comes to this: most boys have a certain knowledge of Latin and a certain knowledge of French. I think it is useful to combine the two, and in that case what they know of French will throw light certainly in some cases on the Latin. But of course to a much greater extent will what they know of Latin throw light on French. Many of the rather puzzling rules of French grammar become at once intelligible to a boy if, by a reference to Latin, he is made to see the reason why. For instance, certain pronouns and participles do not take the terminations of the feminine gender. A boy might be puzzled to know why *leur* in French should not take the feminine termination; but if it is explained to him that it came from the Latin *illorum*, he would never dream of putting the feminine termination. In the same way it might also be explained why it is that the participle of the present sometimes takes the feminine termination, and sometimes not—*une*

GENERAL EVIDENCE.

Max Müller, Esq., M.A.

19 Nov. 1862.

femme souffrant &c. or *une femme souffrante.* Sometimes we find *e* at the end of the participle, sometimes not. If a boy is told that in the one case *souffrant* is a Latin gerund like *amando* from *amare*, he will know, of course, that there ought not to be the feminine termination. I could mention fifty words that a boy has to learn from a dictionary while a simple rule as to their derivation from the Latin, would tell him their meaning, or at all events impress it more firmly on his memory. Take words like *père* and *mère*, and *chaine* and so on; they all imply that the *t* between the two vowels in Latin is elided in French. When a boy knows that rule he knows the rule for forming a great many French words from Latin, *aimé* from *amatus*, *fée*, a fairy, from *Fata*, the feminine of the old classical *Fatum* and so on. When, therefore, he sees a word of that nature in French, he can trace it back to Latin by reinserting the lost *t*. Tell a pupil who knows a little Latin, that an *l* in Latin words, if preceded by *a* or *e*, is in French liable to be changed to *u*, and he will without difficulty trace *autre* back to *alter*, *chaud* to *calidus*, *baume* to *balsamum*, *chevaux* to *caballos*, &c. It is easy to show that the French infinitives in *dre* correspond to Latin infinitives in *ĕre*, the *d* being inserted for the sake of euphony. Thus *peindre* stands for *peinre*, and this for *pingere; feindre* for *fingere*, *étreindre* for *stringere*. *Etreindre* points to another rule, namely, that an initial *s* followed by a consonant in Latin, is always preceded in French by *e;* hence *esprit* for *spiritus*, *état* for *status*, *épée* for *spatha*. Rules of this kind are like the keys to a puzzle. Besides, with respect to French, an English boy has another advantage, because many of the English words come from the Norman-French. A boy knows many French words, only he knows them in their Norman disguise. If he can be taught how to remove that Norman disguise, or be made to see by what process ancient French grew into modern French, he will have learnt some useful lessons as to the history of language in general, and find himself richer by several hundreds of French words. For instance, take the word caterpillar; that comes from *chatte* and *pelouse* in French. Tell a boy that caterpillar meant a woolly cat, or a velvety cat, and he will remember the French *chat*, or *chatte*, and the French *pelouse*, down, *peluche*. Such words are more easily impressed on a boy's mind, and if they are once told to him they are never forgotten. So that it is not so much to teach boys something new, but to show them how to combine and how to utilize what they really knew before. And if you look at it in that light, I believe that one hour a week or a fortnight devoted to the principles of comparative grammar, would be a saving of more than 10 hours in teaching French and Latin.

97. (*Mr. Twisleton.*) Without reference to that very great advantage that you speak of, would a boy, say of 10 years of age, who was acquainted with French, learn Latin more quickly than a boy who was not?—I can only say that Frenchmen say that they learn Latin better, or at least more expeditiously, than Englishmen; but whether that is true or not, is a question which I cannot determine.

98. You do not feel certain that the similarity in many words gives a facility in learning the Latin words?—It would, no doubt, in learning to read Latin; but in writing Latin, there would be a temptation to introduce French words at random, and that is a temptation to which Frenchmen are chiefly liable. French boys are apt to take every French word for Latin. But a knowledge of French would, in many respects, help a boy in learning Latin.

99. If that were so, would there not be a certain advantage in a boy beginning with French at an early age, when they could learn the pronunciation and the accent?—Certainly; I should think that French ought to be learnt in the nursery, and not at school.

100. (*Mr. Vaughan.*) In reference to the possibility of teaching French through Latin, has it ever occurred to you to examine the French language for the purpose of ascertaining how far the Celtic or Teutonic elements disturb that possibility?—Yes.

101. To what extent do you find them do so?—I find the Celtic element in French infinitesimally small; the German element very considerable. But then again, the proper teaching of French would be to show the boy how the German words came into French. For instance, take such a word as *country;* or the French word *contrée;* how does it come into French? It comes from Germans speaking Latin like barbarians. In German, *country* is *gegend*, and the Franks connecting the idea of *gegend* with what is against or before them, (*gegen* is against) having to speak Latin, not remembering at once the proper word, translated their German conception into Latin, and so translated *gegend* into *contrata*, and from *contrata* we get the word *contrée*. Such explanations would interest boys, as showing them the progress of language. They would understand it, and having the general rules that govern the growth of language, placed before them at one view, they could bring them to bear upon any particular point.

102. (*Mr. Thompson.*) They must know some German to be interested in it?—Yes.

103. They must, in fact, know something of three languages?—Yes. I suppose they are learning Latin, and French and German.

104. (*Sir S. Northcote.*) That would be an additional advantage gained in the boys' education?—Yes.

105. (*Mr. Vaughan.*) I suppose that so far as the Celtic element would be at first sight an apparently disturbing cause, it would often turn out to be a concurrent power with the Latin. For instance, that very word to which you were alluding a short time ago, *chaine*, being in Latin *catena*, is still essentially the same with the Celtic or Welsh word "*cadwyn*"?—Yes, it is the same word in both languages, and it is also *kette* in German. But it came into French from Latin.

106. So that the Celtic and the Latin would be often identical?—Certainly; some influence, however, of the Celtic could be traced in French; but I think the traces are much more indistinct than those of German and Latin. The number of German words in French is very considerable indeed.

107. (*Mr. Thompson.*) When you were speaking of what the youths attained to at the gymnasium in Germany, I understood you that it amounted to being able to read easy prose?—Yes.

108. (*Mr. Vaughan.*) Should you say that the point to which the boys in public schools attain is the same?—Do you mean in England?

109. Yes, in England?—I should.

110. About the same, neither perceptibly more nor less?—No; I should say the results in England are about the same as in Germany. The boy who leaves school in Germany, I speak of the average boys, of course, is just able to read without much difficulty an easy French author or a newspaper like the *Moniteur*.

111. About the time of leaving the gymnasia you consider that Germans are not superior to the English at the time of leaving public schools. Is it the case or not that in the higher ranks of society you will find a German speaking French as an adult better than you will find an Englishman of the same rank?—I think it is impossible to speak generally on such a point. It may be so in some parts of Germany, near the Swiss or French frontier for instance, but it is impossible to speak generally.

112. As a general rule, it is impossible to say that the Germans, as a people, speak French better than Englishmen speak it?—Certainly not in Pomerania. At Aix-la-Chapelle or Treves they do.

113. From contiguity, I suppose?—Yes.

114. So that you do not consider, as a matter of general education in the present day, that either the English gentlemen in general, or the English public schools, are below the German gentlemen, or the German public schools?—No; not as far as modern languages are concerned.

115. Should you not say that the number of Germans who speak tolerable English is greater than the number of English who speak tolerable German?—Yes, but that would not apply to school boys, but to grown-up people. I think there are a great many German merchants who come to England and learn to speak English. There is so much travelling now, and a great number of German gentlemen come over here. There are, however, many Englishmen who have travelled on the continent, and who speak German well, not fluently, perhaps, but intelligibly.

116. You do not think that there is any great difference between the two countries in respect to their knowledge of each other's language?—I think it is more for the interest of Germans to learn English than it is for the interest of Englishmen to learn German; but I doubt whether English is taught as much at the German gymnasia as German is at the public schools in England. I was at a very good gymnasium at Leipzig, but there was no English taught, and the French lessons were almost useless.

117. (*A Commissioner.*) French has a much greater currency in Germany than in England, has it not. A knowledge of French would carry you much further in Germany than in England, will it not. I mean to say that it will carry you to a much lower grade of society in Germany than it will in England?—Yes.

118. How do you account for that?—It is partly owing to the French frontier; to France and Switzerland being so near, and partly to the Real-schulen.

119. I suppose that the greatest part of the respectable class of innkeepers, and so on, speak English?—There are more Englishmen travelling in Germany than there are Germans travelling in England, and more Frenchmen travelling in Germany than there are Germans travelling in France. Demand produces supply.

120. It is therefore more to the interest of the middle, and especially the inn-keeping class, of persons, to speak English and French than it is for such persons in England to speak French or German?—Yes; but the effort of speaking among the lower class of people is totally different from that of educated people. For example, servants and couriers speak French very well, simply because their sphere of thought is very narrow, very limited, indeed; whereas an English boy who learns French wants to speak in it on every possible subject.

121. One is purely empirical and the other partly classic?—Any way it is quite different.

122. You do not think there is any difference in the capacity of an English young man to acquire a foreign language, when of the same age, as young French or German persons?—I should not think there was.

123. No marked difference?—No.

124. No assignable difference?—No.

125. (*Mr. Vaughan.*) Let me ask you whether the law which you consider prevails in the French language, rendering its grammatical forms explicable through the Latin language, would apply also to its syntactical rules?—Yes, to a great extent.

126. So as to explain the great difficulties in the moods and tenses of the verbs?—Yes; and that is attempted in this very grammar which I have brought here.

127. (*Lord Clarendon.*) And which I must say is one of the dryest books I have ever seen. Do you not consider it a very dry book?—Yes; certainly it is very dry. But it might be made as amusing as a novel.

128. (*Lord Lyttelton.*) With regard to the supply of foreign teachers, do you believe that there would be any difficulty in meeting any increased demand which would arise in case new languages were taught in our public schools?—No; I do not think there would be any difficulty if some system were established.

129. Will you explain what that would be?—It would be easy for the Government, which appoints masters and professors for Woolwich and Sandhurst, to enter into arrangements with foreign universities, so as to secure a proper supply of properly qualified candidates; but of course it would be very difficult in the case of the public schools, because they are so entirely independent, and I do not see any practical system that could be adopted for them. But the Government could undertake, to a certain extent, to improve the supply of properly qualified teachers from foreign universities. The great difficulty at present is, that many teachers of French and German have not passed through a regular school education, and they do not know Latin and Greek correctly. I believe, however, that there would be no difficulty in entering into communication with foreign universities, and telling certain professors or the vice-chancellors of the universities, that there would be a regular demand for German and French teachers in England, and that, if young men, who had passed the schools and finished their education at the university would also undertake to learn English and pass a proper examination in that language, they might then expect to have their names placed on a list, from which institutions like Woolwich and Sandhurst, and perhaps also the public schools, would be inclined to choose their professors.

130. Would there not be a broad distinction between Woolwich and Sandhurst and the public schools. As public establishments, the Government would be bound to supply Woolwich and Sandhurst, but would the Government commit itself to the foreign universities, to find employment for such as wish it in our public schools?—They could not of course take any responsibility for the public schools; only for the Government schools.

131. (*Sir S. Northcote.*) Supposing the Government were systematically to introduce them into their own schools, would not that lead to a supply which the head masters of our public schools might avail themselves of?—Yes, certainly.

132. In reference to the advantage of having French taught by an Englishman, you laid great stress upon the fact that an English teacher would be chosen who knew Latin and Greek?—Yes.

133. I suppose the class of foreign teachers of modern languages are not good Latin scholars at all?—Not many.

134. Suppose you could get a class of men who were good Latin scholars, would they not possess the advantage you contemplate in choosing English French masters?—Yes, to a certain extent.

135. And, in addition to that, they would have the advantage of being able to teach the proper accent and idiom?—Yes; but I remarked before that in teaching large classes at public schools the best German and French masters despair of ever imparting to their pupils an elegant accent.

136. Would not a man so qualified be, in your opinion, superior as a teacher to an Englishman who had learnt French. There is, of course, the other point of discipline which has been alluded to to be considered?—Yes, but this must be taken into consideration in giving an answer as to the superiority of the one over the other. I can quite imagine that there may be Frenchmen and Germans who know Greek and Latin well, and who also know how to manage English boys. They would be superior to an English man who knows Greek and Latin, but who speaks French with a foreign accent. But I think it would be safer to have an Englishman, if he had a sound knowledge of French. It would not only be safer, as a general rule, but I think it would, with few exceptions answer better.

137. You mean with reference to the discipline?—Yes, it would raise the study of French and German in the eyes of the pupils; but, besides that, an English master, and especially a master who has taught the boys Latin, knows exactly what they know and how he has taught them, and he can build upon that knowledge, whereas the French master would never know that. All that he would know would be that his pupils, of course, possessed a general knowledge of

GENERAL EVIDENCE.

Max Müller, Esq., M.A.

19 Nov. 1862.

Latin and Greek, but what kind of knowledge they possessed, or in what their difficulties chiefly lay, he would not know.

138. Do you contemplate, then, not only that French should be taught in the public schools in England, but that it should be taught by the very same man who teaches the boys Latin? — Not necessarily.

139. Would not that accumulate such an immense amount of work on the classical tutor that he would not be able to perform it?—Not necessarily, because there might be a larger staff of classical tutors employed.

140. Do you suppose that a man could be teaching, without injury to himself or his pupils, French at the same time as Latin and Greek?—At the same time as Latin, certainly.

141. But Greek would also be a part of the functions of the classical master according to the present system? —Under the present system it appears that some of the classical masters work as much as 16 hours a day, and that teaching cannot be worth much. A greater division of labour would be desirable at most public schools.

142. I want first of all to separate these two ideas —the idea of the better discipline which you think would be maintained by Englishmen, and the idea that the Englishman would be able to appreciate better the difficulties of the boys. With regard to the discipline, would there not be some difficulty in conducting a class by an English French master with a French assistant under him present at the same time, and both teaching together. Do you not think that the boys would draw comparisons, and that in other ways there would be breaches of discipline?—This would depend very much on how much authority the English master can exercise over the boys, and on his own behaviour towards the French master.

143. (*Lord Lyttelton.*) Are you aware that in Prussia there is a preference for Prussian teachers of French over French teachers of French in the schools? —I do not think any preference is given either to French or Prussian teachers. I believe, in point of fact, that most of the teachers are Prussians. There are many from the Rhenish provinces where French is spoken.

144. You are not aware that there has been an intentional preference for French being taught by Germans rather than its being taught by Frenchmen? —No, I am not aware of it; the French masters at the gymnasium where I was brought up were Frenchmen.

145. (*Sir S. Northcote.*) I think you said you thought it would be desirable for boys who went to public schools, able to speak French, to have their knowledge kept up at the school. How do you think the habit of speaking French could be kept up in public schools?—Only by private lessons or select classes, the masters being provided by the school.

146. Would you have private lessons for particular boys, such as conversation classes or would you have private lessons for the boys generally?—I think that small conversation classes would be very desirable.

147. Would you propose to make it compulsory, or only exceptional for boys who come with a certain amount of power of speaking?—I think that the majority of boys would not be able to take part in conversational classes.

148. Do you not think, that if the teaching of French, or any part of the teaching of French, were made optional, it would suffer very much in consequence of the time being taken out of the boys' play-time?—It would to a certain extent, but I think there is sufficient inducement now to make thoughtful boys anxious to acquire some proficiency in French and German, because they carry so much weight in the examinations for the public services,—as much as Latin and Greek.

149. How far is French conversation brought into the examinations; is it made part of any of them?—It was originally, but the difficulties were so great that it had to be given up. There were sometimes about 300 boys to be examined, and if the examiners only gave a quarter of an hour to each, it was more than could be managed. It took five minutes before the boy could be brought to say a word, and he would not, perhaps, go on for more than five minutes after he had started, and then it took another five minutes for him to go away, and for another to come up. There was so great a number of boys to be examined, that it had to be given up. It is, however, still kept up in the India civil service examination.

150. But generally speaking it could not be made part of the examination, therefore the inducement to study French conversationally would be lost in that way?—Not altogether. In learning to converse in French a boy improves his general knowledge of the language, and I remember when marks were given for conversation in the public examinations, the relative position of the candidates was hardly ever affected by it. Composition was throughout the same as conversation, and it was on this ground that the examiners thought that the *vivâ voce* might safely be dispensed with. I think the number of boys at Eton and Harrow who would take part in a French conversation class would always be small, but that small number ought certainly to have the opportunity provided by the school.

151. Do you know anything of the system of the examination papers for the Prince Albert prizes at Eton?—I have not examined for them. I have examined only for the prizes at Oxford, and my experience is that they are generally carried off by young men who have had personal and exceptional advantages.

152. But you know something of the examination system at public schools practically?—I am told that some of the boys who carried off the Taylor Institution prizes also carried off Harrow or Eton prizes. There is this great difficulty in our examination. I find that nearly all the prizes are carried off by men who have known French and German from their childhood upwards. We are obliged to throw in a great deal of the literature, and insist on a very accurate grammatical knowledge of the language in order to give other candidates a chance.

153. (*Lord Devon.*) Are you able to tell us whether the number of those who attend the French classes at Oxford is increasing?—I believe that it is increasing. There are teachers of French, German, Italian, and Spanish, appointed by the University. They teach the grammar, and also read extracts from the principal writers in those languages in their respective classes, and with the exception of Spanish, the classes are comparatively well attended.

154. Have you reason to believe that they are increasing or not?—I know the German classes are increasing in their attendances just now.

155. By what class of students are they attended ordinarily. By persons looking to active professions, or by other classes who expect to live at ease, like the mass of young men who go to Oxford?—By both classes; but I ought to say, that though the instruction is given gratuitously at the Taylor Institution to any number of candidates, yet our teachers have to employ much of their time in private tuition. Singularly enough, the boys prefer to go to them, and have private lessons instead of attending their public lectures.

156. (*Mr. Thompson.*) They prefer to go to them singly?—Yes, singly.

157. (*A Commissioner.*) Have you reason to believe that of those who attend these classes a certain number become clergymen, and form a class from which the assistant masters in the public schools are chosen?—There are many undergraduates who attend, and who afterwards become clergymen.

158. (*Mr. Thompson.*) Is it not the case that a great many professed scholars learn German, as opening to them vast sources of information?—Nearly all the graduates who are good Latin and Greek scholars at Oxford try to learn German.

159. (*Lord Clarendon.*) In preference to learning

French ?—Good scholars seem to like to learn German, because it opens to them a vast literature.

160. (*Mr. Vaughan.*) I suppose that within the last 15 years the study of German has much increased at the university ?—Very much, decidedly.

161. (*Lord Lyttelton.*) Is it connected with the study of theology ?—I believe to a considerable extent. I am told by German booksellers that many of the German theological books sell better in England than they do in Germany.

162. (*Mr. Vaughan.*) Might I ask a question generally, not going into particulars, whether the oscillation in feeling upon ecclesiastical matters and principles has at all affected the study of German at the University of Oxford ?—There are very few men at Oxford who take an interest in those ecclesiastical and theological questions who are not able to read German.

163. Does that apply to what may be termed both the great divisions of the ecclesiastical school, or rather, to both the ecclesiastical schools ?—It applies as well to Dr. Pusey as to Professor Jowett ; both are excellent German scholars.

164. (*Mr. Thompson.*) I think that Dr. Pusey was one of the first who introduced the study of German into the University of Oxford ?—This was before my time.

165. (*Sir S. Northcote.*) Do you find the study of Italian increasing at all ?—Yes ; of late years we have had Count Saffi and Signor Tivoli, who succeeded in getting very fair classes.

GENERAL EVIDENCE.

Max Müller, Esq., M.A.

19 Nov. 1862.

166. (*Mr. Thompson.*) Would you say that the importance of classical philology is less at the present time than it ever has been at any period since the revival of letters. Is it diminishing in importance ? —It is not diminishing in importance, but from my experience at Oxford classical scholarship does not hold the place which it ought and which it used to hold. The double-school system has injuriously affected the study of Greek and Latin, and I hope it will soon be repealed, at least in the case of classmen.

167. You do not think it is intrinsically of less importance than it has been since the revival of letters, having regard to the questions that are occupying men's minds in philosophy and other subjects ?—I think both educationally and socially it is more important than ever it was. I may on this point quote the words of Frederick the Great, one of the greatest admirers of French ; he said, "Whatever "you do, do not let a boy grow up without knowing "Latin."

168. Has not Goethe said something of the same kind ?—In spite of his great partiality for physical science, I believe that Goethe would have grudged every hour taken away from Greek and Latin in the education of boys at school.

Victoria Street, Friday, 21st November 1862.

PRESENT :

Earl of Clarendon.	Sir S. Northcote.
Earl of Devon.	H. H. Vaughan, Esq.
Lord Lyttelton.	Rev. W. H. Thompson.
Hon. Edward Twisleton.	

The EARL OF CLARENDON in the Chair.

George Biddell Airy, Esq., F.R.S., called in and examined.

George Biddell Airy, Esq., F.R.S.

21 Nov. 1862.

1. (*Lord Clarendon*) Professor Airy, on the part of the Commission I beg to say that we shall be much obliged for any information you can give us bearing upon the subject of scientific attainments generally and with reference to the teaching in schools ?—I am not prepared with any statement on the subject, but I shall be very happy to answer any question that the Commission may be so good as to propose to me.

2. I believe, Professor Airy, that you are Astronomer Royal ?—I am Astronomer Royal.

3. How long have you been so ?—27 years.

4. You are a member of the Royal Society ?—I am a Fellow of the Royal Society and the Royal Astronomical Society, and I am also connected with other scientific institutions.

5. We shall be glad if you will favour us with your opinion as to what you consider the state of science with reference to our educational system ; and whether you think any advance has been made in it resulting from school and university education ?— I presume it is with regard to schools particularly that you ask the question.

6. It is principally so ?—As distinguished from the universities ?

7. Yes ; perhaps however you will find some difficulty in distinguishing the schools, as you may not have knowledge of them before the double course is completed, but if you have any information to give us with regard to the effect of the schools we shall be obliged to you for it ?—I have seen very little of the schools for many years, and therefore I do not think I can venture to express any well-founded opinion on them. I think, with regard to the universities in general, that the preparation at schools, with the exception, perhaps, of Greek and Latin, is very imperfect indeed.

8. You mean the preparation on scientific subjects ?—The preparation in a scientific direction is almost nothing at all.

9. That is what you have heard as the opinion at the universities ?—Yes, there is no doubt of it.

10. What may be your practical experience of the result of the university scientific education ?—The effect of the scientific education at the universities depends in a great measure on the character of the examiners, and the examiners are generally young men. At the University of Cambridge, which is the only one with which I can profess to be acquainted, the scientific examiners confine themselves in a great measure to pure mathematics. The great scientific subject there is mathematics in its various applications, and the examiners are for the most part Masters of Arts who have just taken their degrees, and who are put forward at their own wish and through the interest of their respective colleges as proper persons to be appointed mathematical examiners.

11. You are speaking particularly of Cambridge ? —Yes, that is the only university that I can speak very well about. I think the examination in all cases bears the impress of that particular choice of examiners. Their mathematics are the mathematics of speculative

GENERAL EVIDENCE.

George Biddell Airy, Esq., F.R.S.

21 Nov. 1862.

men who know very little of the science of the world. In consequence of that they run into speculative subjects to an inordinate extent, and are very silent indeed in general in regard to what may be called the mathematics of true science.

12. And the consequence of this system is, that you do not consider that men acquire a great deal of proficiency at the universities?—Not in practical science or in the science of the world.

13. (*Mr. Thompson.*) Do you mean cosmopolitan science?—Yes, I mean such science as is pursued by scientific men out of the universities. There is very little advance indeed towards that.

14. In what way do you consider that the mathematics are taught, because there may be a great deal of difference in the way in which mathematics are taught in the universities. I would also ask in what way do you consider they are taught in the schools. Do you think that men who come up in general are so ill prepared that they may almost be looked upon as raw material when they come up to the universities, and do you consider that they are well taught at the universities?—In the subjects to which they give their attention they are exceedingly well taught.

15. At the universities.—Yes. There is no teaching equal, for accuracy and completeness, to the Cambridge teaching, in the subjects to which it applies.

16. (*Lord Clarendon.*) But these subjects are somewhat perverted or rather not turned to account in the course of the examination?—Yes, they are. I think they are made rather theoretical than as relating to subjects of general scientific interest.

17. Have you ever heard at Cambridge that the examination in that respect, the social education in mathematics and science, may be considered so defective as that the subjects to which you have alluded are ignored; that is, that the mode of teaching them is defective?—They are almost ignored. If you regard mathematics in the light I do, the freshmen who come up very seldom know any thing of mathematics.

18. That is to say, those who come up from the great public schools?—Yes, those who come up from the great public schools or from any other source.

19. Do you consider that as respects the present mode of teaching mathematics there is any great harm in that, but would not they do better if before the age of 17 or 18, which is about the age that freshmen come up, they had some elementary knowledge imparted to them at school. Should you like that or not?—I should like very well that freshmen should have a good deal of what may be called the mechanism of mathematics, and in that I would include algebra generally; but with regard to the demonstrative part of mathematics I should require the most moderate amount, because I do not think it could be taken up with great advantage till a later period of time; but I think that the study of algebra is one which is a great opening to the mind indeed, and the mechanical part could be learned by a boy very well, and his mind would be very greatly improved by it.

20. You would consider the learning of algebra a very important minor training?—A very important minor training, certainly.

21. And you consider that that might be taught at a very early age?—No doubt it might.

22. (*Lord Lyttelton.*) We find in all these schools they profess to teach the elements of algebra; do you state that the ordinary freshman on arriving at Trinity College, Cambridge, knows nothing of algebra?—It is a long time since I was actually connected with the college, but at that time that actually was the case.

23. (*Mr. Twisleton.*) You are speaking, I presume, of 20 or 30 years ago?—Yes.

24. (*Lord Lyttelton.*) You are not aware that the matriculation examination requires competent knowledge of the first two books of Euclid and the elements of algebra?—It requires something of the kind, but I do not know what. It was not established in my time.

25. (*Lord Clarendon.*) Are you acquainted with the requirements of the matriculation examination at the London University?—No; I must beg it to be understood that in all these things my acquaintance is rather of an ancient date.

26. Will you have the goodness to look at page 35 of this little book. You will see there some of the requirements of the matriculation examination for the London University?—For what age is that?

27. (*Mr. Thompson.*) For boys of 16 or 17 years of age?—It is too much a great deal.

28. (*Lord Clarendon.*) That is more than you would like a boy to bring from school?—Yes.

29. (*Mr. Thompson.*) In explanation of that they say that it is an elementary description of knowledge?—Yes, that limits it in a great degree.

30. (*Lord Clarendon.*) Will you have the goodness to give us your opinion as to how far you think mathematics might be advantageously taught in school up to the time boys leave, say at 18, both with regard to mind training and the further study of mathematics in a more advanced stage?—I think that arithmetic and algebra should be taught pretty well, excluding of course in algebra the very high theories of equations, and work of a high order of that kind.

31. (*Lord Lyttelton.*) How far in algebra would you go?—As far as quadratic equations.

32. (*Sir S. Northcote.*) You would desire to see trigonometry taught, would you not?—Yes.

33. Would you desire conic sections?—Not conic sections.

34. (*Mr. Thompson.*) Euclid, of course?—Not much of that.

35. (*Lord Lyttelton.*) The two books?—Not so much as that.

36. One book?—To the end of one book of Euclid would be almost too much, because I think the mind is not prepared for it at that early age.

37. (*Mr. Twisleton.*) Up to 18?—Yes.

38. (*Lord Lyttelton.*) Any simple mechanics or hydrostatics?—It is desirable that some general notion should be got of them, but I should not urge the following of them into close mathematical details.

39. (*Lord Clarendon.*) If the school curriculum in mathematics was limited as you desire and suggest, you would expect that they should all be fully learnt, and that a boy should come well grounded in them?—Yes.

40. Do I collect that you would attach more importance to that than their coming with a superficial knowledge of more branches?—Yes; but I think I may say that a general acquaintance with several physical subjects is very desirable, not for the accuracy of knowledge at the time, but because it does service by giving something to the mind to feed on in future and to hang more knowledge upon. I would say that such a subject as electricity is desirable. I remember with gratitude the little electricity I ever learnt when I was a school boy, and of course I could learn nothing but the more general rules. What I have gained of accuracy in everything has been learnt since. I would also advocate the learning of a little chemistry at that time. I think that the having to do with a few bottles of acids and a few specimens of alkalies, and managing gases a little, may lay a sort of foundation for valuable education, and be useful to a man in succeeding life.

41. (*Mr. Thompson.*) What would you say of sciences of observation, not involving experiments, such as zoology and botany, the sciences of classification; what would you say of them as disciplinary studies?—I doubt very much whether the mind of boys is powerful enough to grapple with them.

42. (*Lord Lyttelton.*) We have been told on very high authority that, with a view of bringing out and strengthening the power of classification and order which are in a boy's mind, a little simple teaching of these sciences of observation would be of very great value, to the extent perhaps of an hour and a half a week; do you concur in that opinion?—Probably it might be valuable. But I think that, generally speaking, there is a tendency to presume too much on the power of the boys.

43. (*Mr. Twisleton.*) With regard to the faculties of observation, are you familiar with the minds of boys between the ages, say, of 11 and 15?—Not very much, perhaps, with the exception of my own sons.

44. Is it not the case that boys of that age manifest a good deal of curiosity, and that if properly directed they would use their observant faculties very keenly?—No, I do not think they would very much. I think it would be too hard upon them to force them to do it.

45. In regard, for example, to the science of botany, we have evidence as to the possibility of interesting children of that age very keenly in botany; supposing it were possible to interest them, is there not an advantage in exercising the observing faculties at that age?—I think there would be great advantage in anything they would take up with interest to themselves.

46. Without regard to any one particular study you think that anything that would sharpen their faculties of observation at that period would be most useful to them?—Yes, undoubtedly.

47. (*Sir S. Northcote.*) Do you not think if a boy had a good deal of his time taken up with a number of these studies which are rather irreverently called "ologies," it might have a tendency to draw off his mind from the severer work of the classics?—Yes, I think it might.

48. (*Mr. Twisleton.*) Would not that depend very much on the time that is bestowed upon them?—I think he would feel as if he never had any rest.

49. (*Lord Clarendon.*) Then, as far as your knowledge and experience goes, you would say that the scientific education of England is not so satisfactory as it might be?—There might be some classes of boys to whom it might be an advantage to have more, but not very much, because I think that boys should be left very much to their own leisure.

50. You say that in our great schools mathematics are for all practical purposes ignored?—Yes.

51. That the youths do not acquire that knowledge which you think they might acquire before they come to college, and therefore are ill prepared; that they have no knowledge, and therefore cannot have acquired any taste for the study?—Just so.

52. That they may be well instructed at the college, but are rather perverted by the examiners?—Yes.

53. And that the general result is not that which might be achieved?—The result is undoubtedly that in the pursuit of what are commonly called the applied mathematics we are very bad.

54. How should you say we stand with reference to foreign nations; take France and Germany as to applied mathematics?—As to Germany, we are undoubtedly lower. There are undoubtedly a great number of German students turned out every year who do what perhaps our students cannot, and certainly do not do.

55. In applied mathematics?—In applied mathematics. In France I can hardly say that they stand so well; I think it is not so much so in France.

56. They are pretty much the same in France as in England?—Just the same in France. There are a few in France who study applied mathematics.

57. But that study is very general in Germany?—Yes.

58. There would be more men superior to us in Germany?—Yes; more men superior to us in Germany than there would be in France.

59. Of course you would attribute that to the better system adopted there, because I do not suppose you attribute it to any intellectual superiority which Germans might possess over Englishmen?—I think it would depend in some measure on the class of persons who go to the university. The tendency towards the German universities is not so much a matter of fashion and rank as it is England.

60. It is a standing necessity in Germany?—Yes; the greatest number of those who attend the German universities are persons who go there to read and study.

61. And who intend to profit by their studies?—Yes, who intend to profit by them. The constitution of the English universities is very peculiar, and is never understood by foreigners at all; that is to say a foreigner does not understand the importance we attach to the social education of the university as distinguished from the book learning, and of that social education I apprehend there is very little in the foreign universities anywhere. The students really do go to read books and to study them well, so as to master the subjects.

62. Social education not being so much aimed at?—Social education not being aimed at at all.

63. The consequence is there is a great deal more instruction widely disseminated, and it takes more root?—Yes, just so.

64. (*Mr. Thompson.*) Now with respect to pure mathematics, how do we rank in England with regard to Germany?—I think we stand very well.

65. There are some pure mathematicians of great eminence here?—Yes, of great repute.

66. (*Lord Lyttelton.*) Equal to any foreigners perhaps?—Yes.

67. (*Sir S. Northcote.*) I suppose that the observation you made just now with respect to the difference between the universities in Germany and England would to some extent apply to the public schools in England, would it not, namely that the public schools in England fulfil the social duties which the public schools in Germany do not?—Yes, undoubtedly, and in some of the schools, as we all know, such as Eton and Harrow, and other large schools, a great number of pupils go there who do not care, and whose friends do not care about their education at all. They go for the social advantages of them. Perhaps, I may be allowed to mention here a matter which has occurred to me. I received this morning a letter, a copy of which, or any portion of which, I should be happy to supply to the Commission. It is from a gentleman who visited this country a short time since, who came from Vienna, with whom I had had some previous correspondence as Astronomer Royal, but whom I did not previously know personally, nor do I know in what capacity he came to this country; but I am inclined to think from the extreme care which he took in observing things, that he came over here on some mission from the Austrian government. At all events, he did observe things most accurately. He is a man of great talent, and a most favourable representative of the German character. I have never seen a person who picked up such a quantity of information in a limited time as he did. This morning, as I have said, I received a letter from him, in which he expresses his sense of what he had seen in this country. He admired almost everything that he had seen in England, but then he says there is one black spot, and that is the school rooms at Eton.*

68. (*Lord Lyttelton.*) In what sense did he write when he said the "school rooms" at Eton were a black spot?—I suppose that he conceived them to be so totally useless.

69. Did he mean the school rooms themselves, or did he mean the teaching?—Evidently he meant the education there.

70. (*Mr. Thompson.*) The "school rooms" is rather a singular expression?—That is what he says.

71. Might he not have alluded to the smallness and filthiness of the building?—O dear, no. It is quite

* The following is an extract from the letter above referred to:—

"Vienna, November 18, 1862.

"It is but to-day that I dispose of a free moment to tell you how much your kindness contributed to the delightful impression we had from England, not to speak of the mighty and bright one which that country made upon ourselves in all its features, except only—allow me the frank utterance—in the school rooms of Eton College, which we found far below our expectation, notwithstanding our being previously informed of their state. The core must be a very fine one to make issue through that bark fruits as excellent as there really are to be found." [The original is in English.]

GENERAL EVIDENCE.

George Biddell Airy, Esq., F.R.S.

21 Nov. 1862.

evident what he meant, for he goes on to say this: "There must be a noble kernel to push out buds "through such a system."

72. (*Lord Lyttelton.*) Had he seen Harrow?—I am not sure.

73. (*Mr. Twisleton.*) Perhaps you can append any portion of that letter bearing on the subject to your evidence?—If it is thought desirable I will willingly do so.

74. (*Lord Lyttelton.*) Do you know whether he had seen any of the other large public schools in this country?—I am not able to say; he had been at Cambridge, I know.

75. (*Mr. Thompson.*) I am almost afraid to ask you what he thought about Cambridge, for fear of hearing some similar reply?—No, he very much admired Cambridge.

76. (*Lord Clarendon.*) As he is a man of great intelligence, I wish he had seen some of the other schools. He might probably have said the same about them, and I think his opinion should be asked, because we are in general so thoroughly satisfied with our own institutions, and so convinced of their superiority, that the expression of such opinions as he would give might be very wholesome?—Of course, any opinion of that kind must be taken with a limitation dependent on the estimate he might form of the social education of those schools.

77. I suppose that by the term "school rooms" he must mean the class of instruction given?—Yes; there seems to have been something which struck him very much indeed.

78. (*Mr. Twisleton.*) I presume you do not deem it would be incompatible with retaining social education to give good instruction?—Certainly not; no incompatibility at all.

79. You would not consider that to teach mathematics to the extent and within the limits to which you have just adverted, it would take so much time at a public school that it would materially interfere with other studies, such as that of the classics, for instance?—Certainly not; the only limit, in my belief, to the power of teaching mathematics in public schools is the state of the boy's mind, and I am fully persuaded of this, that boys cannot master demonstrative mathematics. They can learn the mechanism of mathematics, and it is in that way that algebra is a particularly favourable subject for their progress, because it does go on by rules in a great measure which do not require at every step demonstration in the same way the geometry does. But I consider that demonstration requires a mature mind.

80. (*Lord Clarendon.*) Without asking you for any precise opinion on the subject, I would inquire how much time would be sufficient to obtain that amount of mathematics to which you have adverted, say in an average attendance at school for four years?

(*Mr. Twisleton.*) You may even say five years.

(*Lord Clarendon.*) Yes; in an attendance at school for five years, how many hours a week would be necessary not only to learn but to become practically well-grounded in mathematics within the limits you have described?—Very little time indeed; an hour or two a week. There are many of these things which I spoke of as the mechanical part of mathematics, algebra in particular, which can be learnt at an early age, and learnt very well. I am in the habit of receiving at the Observatory supernumerary computors. They are for the most part the sons of tradesmen in the neighbourhood; boys whom I engage at a low rate of payment, and whose parents are very glad indeed to send them to the Observatory for the acquirement of habits of order, and so on. I have instituted an examination for these boys,—not a competitive examination, which I tried once or twice, and of which I am effectually sickened,—but an examination of efficiency, and I found only two or three days ago, when I examined one of the boys of the age of 15, that he mastered algebra very well indeed to the extent of which I have spoken.

81. Where was he educated?—At a proprietary school.

82. (*Lord Lyttelton.*) Up to quadratic equations?—Yes.

83. (*Lord Clarendon.*) That was the ordinary system of the school, was it. He had not been specially educated for that purpose?—No; it was the ordinary system of the school; he had not been specially educated.

84. Do you think that to master that amount of algebra up to quadratic equations, and including one or two branches of trigonometry, would not be too much to expect?—No; they can master trigonometry very well.

85. Should you say that in the ordinary course of a boy's attendance at a public school two or three hours a week would quite fulfil your notion of sufficiency in regard to these points?—It would be abundantly sufficient. I should take these as the limit; algebra, as far as quadratic equations and including them; the whole of plane trigonometry; and about two books of Euclid. I think that would be amply sufficient for commencing at the university, and, taking the ordinary run of boys it would be quite as much of demonstrative mathematics as they are competent to do.

86. (*Lord Lyttelton.*) Does it not follow that the teaching must be very bad now, because, in point of fact, at almost all these schools they profess to teach three or four hours a week, and yet they do not arrive at the amount you have stated in the average number of boys. Must it not follow, then, that there must be something defective in the teaching?—Yes.

87. (*Mr. Twisleton.*) Would not something depend on their being taught arithmetic correctly and rapidly when young?—Most decidedly so. I did not mention arithmetic particularly, because I considered it a step towards algebra. Arithmetic ought to be learnt very well.

88. (*Sir S. Northcote.*) That being your opinion of what could be done by boys about 17 or 18 years of age, do you think the standard of the Woolwich examination is pitched too high?—I have looked at the standard of the Woolwich examination, but I cannot say that I am familiar with it. I am inclined to think it was pitched too high, and that there has been some recession of it.

89. Do you think it is pitched too high for that class of boys who attend public schools?—That was my impression, but I cannot say that I am prepared to verify it by absolute reference.

90. Assuming that to be ascertained, is it not a misfortune that it should be so highly pitched that boys should be obliged to quit a public school and devote themselves to obtaining some special cramming for that purpose?—Yes, it is a bad thing to withdraw boys from general education in order to give them special education; but in regard to the extent of education acquired, I think that the limit is put at the age of 19 for the entrance of competitors at Woolwich. The mind makes great progress in two or three years at that age.

91. (*Mr. Thompson.*) When you are speaking of the limit of a boy's capacity at that age for mathematics, you speak, I suppose, of a boy of average understanding?—Yes, in my own case for instance, I knew a great deal more of mathematics when I went to the university than I needed for matriculation.

92. Would it be possible with the knowledge you have mentioned that a boy going to the university should, with what he learned at the university, obtain a place among the first six wranglers?—I have no doubt of it, or even be a senior wrangler.

93. (*Lord Lyttelton.*) Are you able to say whether the high wranglers of the last few years have been superior or inferior in respect to valuable mathematical knowledge to those of your day, when you were a young man?—About four or five years ago I very carefully analysed the senate house papers, and they displeased me very much in the sense I have

mentioned, that they contained too much speculative matter.

94. Though they may be equal or superior in mathematical cleverness or ability, do you think a good wrangler of the present day inferior in useful mathematical knowledge to what the wranglers were formerly?—I think that may be so in reference to matters of general education. There are things with which boys might acquire some familiarity, and which do not involve a strain on the mind, but which would be valuable to them in after life. I remember when I was a school boy learning several things which I did not trouble myself much about at the time, but from which I got ideas which have been extremely useful to me ever since. I remember when I was under a writing master in our school that he would make us go through a course of book-keeping by double entry. I did not care about it, but still I got enough instruction to remember it and to acquire the logic of it, and it has been of infinite value to me since. Now I never cared for that at the time I was at school, and I may say the same in respect to chemistry and electricity, as to their being extremely useful to me. I learned a little in reference to electricity, I cannot say how, but that little has been of great value to me.

95. (*Lord Clarendon.*) That knowledge must have been obtained *extra muros*, how did you get it?—By getting some books or talking with somebody perhaps, who took an interest in it. I mention this not as a matter of school knowledge, but rather as showing that knowledge acquired at that age, although it is not the subject of intense study or well ordered study, does prove to be of value afterwards.

96. Although it may not be a very intense study still you consider that it was in your case by no means bad study for the mind?—They were rather acquirements than training of the mind.

97. You did not go deep enough into any of those subjects to be termed training?—No, but just so far as to enable me to seize on the thing afterwards.

98. (*Mr. Twisleton.*) They were an initiation of taste as it were?—Rather an initiation of knowledge.

99. (*Sir S. Northcote.*) Those were things that you acquired yourself, in consequence of your taste leading you in that direction, but is it not possible that if they were made the subject of class teaching they would not be productive of much benefit?—I am inclined to think that the exhibition of some of the most remarkable physical sciences would be attended with useful results to all.

100. (*Mr. Thompson.*) Even although they acquired but a slight knowledge of them?—Yes; it is astonishing how much the education of the mind comes, not by precise book studies but by little things which boys are able to observe, and upon which the mind feeds unconsciously afterwards.

101. (*Lord Clarendon.*) If you have any other suggestion or opinion to offer, Professor Airy, with reference to the promotion of the study of science at school, we should be thankful for them; I mean with reference to the general system?—In regard to the great fundamental part of the education of the great schools, namely, the extensive knowledge of the classics and of classical literature, I look on that as very valuable indeed. I cannot express the value which it has been to me all my life to have had a good classical training. I have had in particular an enormous quantity of poetry committed to memory.

102. What kind of advantage do you think you have derived from that, Professor Airy?—In the first place, from the quantity of classical poetry I committed to memory, I have acquired and kept up a constant familiarity with the language, and I am a much better Latin and Greek scholar now than I was when I was at the university, which has arisen mainly from that circumstance to which I have alluded. In the next place, I have a constant fund of invaluable literature in my mind, and that sort of training in matters of history, both the history of men and the history of mental philosophy, which accompanies those acquirements.

103. Therefore you would not on any account disturb the classics, as the basis of English education at our great public schools?—I would not on any account; and perhaps more importance may be attached to my opinion in that respect as being professionally, as I may say, a mathematician, and having made my strong points in that science, I still cannot sufficiently express the importance I attach to the study of the classics.

104. But taking the classics as the basis of our education you see not only no difficulty but a great advantage in superadding good scientific knowledge?—Just so.

105. The two things are quite compatible?—The two are quite compatible. In public schools the general tone should undoubtedly be classical; but with the elements of mathematical education, I think there might be added a considerable knowledge of the less severe kind of physical sciences. And with advancing years, as during the years spent at the Universities, I think it very important that sound demonstrative mathematics, with a strong tendency to applied science, should constitute a large part of the education. I think it most desirable that the college course should not be a mere continuation of the school course.

Victoria Street, Friday, 19th December 1862.

PRESENT:

Earl of Clarendon.	Sir Stafford Northcote.
Earl of Devon.	H. Halford Vaughan, Esq.
Lord Lyttelton.	Rev. W. H. Thompson.
Hon. Edward Twisleton.	

The EARL OF CLARENDON in the Chair.

Henry W. Acland, Esq., M.D., called in and examined.

1. (*Lord Clarendon.*) I believe you are the Regius Professor of Medicine at Oxford?—I am.

2. Are there any other offices which you hold?—I am also Clinical Professor. Before I held those offices I had been for 14 years Lee's Reader in Anatomy; I taught anatomy and physiology during the whole of that period, and I had the exclusive charge of the physiological collection at Christ Church.

3. Were you at a public school yourself?—Yes, I was at Harrow.

4. I suppose then, with reference to your Harrow reminiscences, the important offices which you have held, and the collections which have been under your care, you are able to judge whether the young men come up prepared at all in physical sciences or are grounded in any of them, or whether they

GENERAL EVIDENCE.

Henry W. Acland, Esq., M.D.

19 Dec. 1862.

are desirous of acquiring knowledge upon those subjects at the university?—Yes, I have had means of making observations on that point.

5. Will you have the goodness to tell us what is your opinion upon it?—Generally speaking, as far as the men who come to Oxford are concerned, they have very little taste for pursuits of that kind, and they have hitherto been very little encouraged to cultivate them.

6. Would you say that they have very little taste for it owing to no attempt having been made to test whether they had any calling for those studies, or would you think that there was little disposition naturally?—We are living in a period of transition with reference to the educational question: and if I look back to the time when I became Reader in Anatomy at Oxford, which was in the year 1845, I should say that it was a very rare thing for any person to come with his mind previously directed to such pursuits. In the 17 years which have elapsed, that state of things I believe has somewhat changed. I believe that a few years hence we shall find that boys come to the university quite able to appreciate the opportunities of scientific study which they have now in Oxford, but which they had not a few years ago.

7. Do you consider that at schools attention is turned to physical science?—I think it is beginning to be so. I cannot speak from personal experience on that point; but I can see that the younger men who have left the universities with enlarged tastes in these directions, who are not destined to follow scientific pursuits, are beginning to carry away with them into the country, into the different situations to which they may go, and, among others, to private schools, scientific knowledge, sometimes of a very precise kind; and so in that way necessarily those tastes will be gradually disseminated throughout the country and react on the universities. I know, for instance, an assistant in a private school in the north of Oxfordshire who obtained a second class in the Oxford Natural Science School.

8. But as yet you have no knowledge, or no practical proof of attention having been turned to those subjects in the great public schools?—I do not know about that, excepting as regards Wellington College, where I have understood there is a regular working chemical class, which I have information to assure me is going on exceedingly well. I have a letter to that effect from Mr. Benson, to whom I wrote on the subject.

9. Has any method occurred to you, by which the study of physical science could be stimulated or promoted at the great schools?—I am afraid no precise method.

10. What I had in my mind when I asked you that question was whether if the University were to take the lead, and were to require some proficiency in young men coming up from the schools, whether that would not compel the schools to pay more attention to it?—It would be so of course; but the reason I hesitated in my answer was, that I cannot satisfactorily answer a question of that kind without seeming too discursive, and without stepping further back into the subject.

11. We shall be very glad to hear any opinion that you may favour us with?—First of all it must be decided in what subjects they had better be tested, and that is a difficult question. If you decide at the universities in what subjects men might be allowed to take honours,—I am speaking of scientific subjects,—then it is easy enough or ought to be easy enough to assign the way of granting those honours. If you decide what scientific attainments are equivalent to the requirements for a pass in the *literæ humaniores*, then it ought to be easy enough to fix a standard for the pass in such scientific school. If again, stepping further back, you decide that men or boys coming to the universities should have a certain preliminary scientific knowledge, you must first settle what is the proper kind and amount of preliminary knowledge for them to be tested in before they shall be admitted to the university. There lies the chief difficulty of the question to my mind.

12. That is a difficulty which has been solved at the London University. They have settled the amount of physical science that is required for matriculation?—Yes. I am quite prepared to express my opinions on that subject. About 15 or 16 years ago, the question was put to me by Professor Jowett and Dr. Stanley, who were then young tutors. About that time attention was being paid to improvements in the studies of Oxford. Those gentlemen were engaged in some extensive inquiries, with regard to the promotion of a wider sphere of education, and they wrote me a letter asking my opinion what scientific studies should be introduced. That question forced me to form a definite opinion as regards all these subjects in connexion with Oxford. The opinion which I gave then was this, that there were three fundamental subjects, which unquestionably ought to be required before young men were allowed to pursue any other; and that they might not take honours or pass except they showed proficiency in these three. These were, Physics, so called, Chemistry, and Physiology, to use the word physiology in a very general sense. I thought that those three subjects were so fundamental to all other organic sciences, and so necessary to the study of most branches of scientific knowledge, that all pass men ought to be required to pass in those subjects, before they were allowed to take other more detailed ones, such as geology, mineralogy, or zoology, or many other "ologies," which might be mentioned. Accordingly, wisely or unwisely, that became the law at Oxford, and at Oxford now no person can pass in a scientific subject, except he passes in two at least of these three, which we held to be educationally fundamental to the others, as I have said above.

13. (*Lord Lyttelton.*) Will you define what you mean by Physics?—As science has enlarged of late years, it has become difficult to define the word in a way that will find general acceptance. And therefore also it is not easy to find a proper *elementary* text-book of Physics even for the universities, and much more for schools; but that is a matter of detail upon which other persons would be more able to speak with authority than myself. As a practical answer to your lordship's question, I should say that there have always been classes of so-called experimental philosophy, or as many persons prefer to call it physics, in which the general laws of matter, of heat, and of electricity have been treated experimentally, and without much mathematical reasoning or formulæ; as in an old book, now too old to recommend as a text-book, Arnott's Physics. Physics so treated are educationally fundamental to all natural sciences. No person is a chemist unless he has some knowledge of physics, and no person can be a physiologist who is not to a certain extent both a physicist and a chemist. The principle is, as the members of the Commission know, every day becoming more and more established, that all the biological sciences imply necessarily a knowledge more or less of physics and of chemistry. To sum up all, unless your lordship wish to ask me any detailed questions, I would say that just as I believe that these three subjects are fundamental for the pass men at the universities, so I am led to believe that the two former should be the fundamental ones for schools; and with all submission I must declare it to be my fixed opinion that, just as I said 15 years ago, physiology, physics, and chemistry should be the fundamental subjects at the universities, so I think that those who come to the universities, if they really are to progress and if their education is to be carried on systematically, had much better come trained as far as boys should be trained in such subjects at all, in physics, or in chemistry, or in both, before they come to the university, and then they would either carry on these subjects to a higher pitch at the university where the greatest opportunities ought to be found,

and which are to be found at Oxford now, or they might pass on to the biological or other sciences they pleased.

14. (*Lord Clarendon.*) I suppose you would only require an elementary knowledge from the schools; you would not require mathematical demonstration? —That is a question to which I cannot answer simply yes or no; that, I think, would turn very much on the character and abilities, and I may also say the attainments of the boys. But speaking generally, I think that if they see these subjects experimentally treated in the class room they will get a large quantity of knowledge, which will stand them in excellent stead even if they pursue exclusively mathematical studies afterwards.

15. Will you look at page 39 of that book; you will there find the subjects required for matriculation at the London University (*the book is handed to Dr. Acland*)?—I know this list. The matriculation at the London University I understand is quite a different thing from matriculation at Oxford; it is meant, I believe, to imply a higher standard, and a more advanced period of education.

16. Yes, but not a more advanced period of life. The time of entry is about the same, or even younger, 16 and 17?—Yes.

17. (*Mr. Vaughan.*) It is not a very formidable list, is it?—No, but it is meant to be a higher list than our matriculation.

18. (*Mr. Thompson.*) Is there a university examination called a matriculation examination at Oxford?—No.

19. Merely a private examination?—Simply a college examination; at some colleges, as is well known, it is exceedingly strict, as at Balliol, and it is becoming so in others.

20. (*Lord Clarendon.*) You would not consider that that list of subjects upon which an elementary knowledge is required is more than you would desire at the University of Oxford?—Before they come up?

21. Before they come up for matriculation?—That must depend entirely on the answers required. The subjects mentioned in this list contain some of the highest departments of knowledge. It depends entirely on what answers are required. In answer to your lordship's question I may say that I believe it would further the cause of education, if men came to the universities with some knowledge of this kind. When I said I was familiar with this list I meant that I knew it generally; I had not observed that its arrangement was identical with what I had arrived at independently, viz., that natural philosophy and chemistry are the subjects which had better be acquired before they come to the university. That I have come to solely from my own observation.

22. You see that as those subjects are required, of course, the requirements are met, and therefore there must be schools at which that sort of elementary preliminary education is given that shall enable boys to pass at the London University in those subjects?—Yes, certainly; but whether the answers to the questions set imply sound experimental observational knowledge or not, I cannot tell.

23. We were informed that they did not require the mathematical demonstration of those subjects?—No; but I may say, generally, that I should value all knowledge of these physical sciences very little indeed unless it was otherwise than bookwork. If it is merely a question of getting up certain books, and being able to answer certain book questions, that is merely an exercise of the memory of a very useless kind. The great object, though not the sole object, of this training should be to get the boys to observe and understand the action of Matter in some department or another; and although I am perfectly aware, that what is called practical knowledge, if merely manipulatory, in any subject whatever, is a humble thing enough; yet, on the other hand, I must say that the utmost amount of knowledge on these subjects without that practical and experimental knowledge is to most persons nearly as useless. You want the combination of the two; and for youths, I value very little the mere acquisition of a quantity of book facts on these subjects. I want them to see and know the things, and in that way they will evoke many qualities of the mind, which the study of these subjects is intended to develop.

24. Then you would consider that the study of those subjects, the observation and the practical part of them would be an important training of the mind?—Unquestionably, it is an important means of training the mind; whether the most important, I do not say, but that it is important, I say heartily.

25. You are aware, probably, that at the public schools the study of the classics, which is the basis of education there, is founded mainly on the notion that it is the best training that can be given to the mind; but should you say that that mind was as well trained as possible, that all the faculties of the mind had been called forth, when the study of physical science had been altogether omitted; do you think that the study of physical science calls out any faculties that are not developed by studies restricted to the classics?—I have no doubt that the study of the physical sciences evokes qualities which are not evoked by the study of the classics; but I am not at all prepared to say that those same qualities or very similar qualities may not be evoked by other means, although not by the classics. I mean to put this reservation in stating my opinion, that I cannot think that the study of the physical sciences is, as I sometimes hear it stated, absolutely necessary for everybody. That is all. I only wish to make that limitation. I believe it may be practically expedient; but there may be good men, as good as anybody else, without it. It is perhaps unnecessary to make that reservation, but I am in the habit of hearing the subject spoken of sometimes as though a man must be an inferior man because he is unacquainted with any branch of physical science. I do not hold that at all, because many of the qualities of observation, practical habits, manual dexterity, and many such things are acquired in a high degree by persons who have no scientific knowledge, as, for instance, by seamen and men of that kind, who acquire an extraordinary acuteness of observation and readiness, and a great many of the qualities which are possessed by scientific men; being, however, very deficient in some others.

26. What plan would you like to see adopted for producing that amount of knowledge or that education in physical science—should it be brought about by the universities taking the lead, or the schools—which do you think is desirable?—At the universities; at least I must not say the universities, but at Oxford, we have now almost everything. I think, that can be desired, excepting the goodwill of some of our classical friends, and that I desire still; we have most of the apparatus and arrangements that are needed for the present.

27. The study is voluntary there?—The study is entirely voluntary.

28. And forms no part of the regular curriculum?—Not necessarily.

29. Do you think that as long as it remains in that state it will be prosecuted with vigour or success, except by a few people who have a special object in doing so?—That is not easy to say. When I was first Reader of Anatomy at Christ Church, I had a very good class, which gave me no trouble, and I had great satisfaction in it for some years, until the University, unadvisedly as I thought, decided that there was to be compulsory attendance on Professors Lectures. Now, speaking generally, I see no reason why there should not be compulsory attendance on professors, scientific and others, just the same as at college-chapels and lectures; I cannot see the difference. However, my class was more than doubled in number, and became very troublesome. I got rid of them by telling them that hitherto all students who had come of their own goodwill and pleasure steadily worked with me, and that I should sign no certificates

Henry W. Acland, Esq., M.D.

9 Dec. 1862.

of attendance for those whom I noticed to be inattentive. This cleared my room the next day to the normal numbers, and I went on in comfort for years afterwards; so that as far as the real study and mastery of these subjects is concerned, I am not at all sure that the subjects will prosper a bit more if the attendance be compulsory. On the other hand, I must repeat what I said before, that there can be no reason why one class of subjects should be compulsorily attended, and another not, when once it is decided what subjects ought to be pressed on the students.

30. (*Lord Devon.*) I understood you to address your observations principally to the commencement of the university course. I should like to ask you whether your attention has been called (I suppose it has) to opinions that have been given on that subject by a man of great eminence, Professor Owen, as to the comparative importance of introducing this or that branch of physical science into public schools, and the order in which they should be introduced. He has expressed here, very ably and clearly, an opinion in favour of introducing those branches of science, which imply the drawing out of the powers of observation and the exercise of the powers of classification, as those which first should be taken by young boys. It is slightly different from the view you have expressed here. What would be your view upon that?—I said before, that the opinions which I hold I really hold with very great diffidence, and I have already stated them. I also stated that I had been for 13 or 14 years teacher of physiology, and not only that, but in order to show that I do not speak from a lack of devotion to the subject I have brought with me the synopsis of a physiological collection, which was made under my direction, with very great labour. When I went to Oxford, I began to make the collection, of which this is the record, on the plan of Mr. Owen's great collection, or rather of the one he had charge of, viz., John Hunter's. I thought it so necessary to the general national education, that the power of studying physiology in its highest departments, and in the best possible manner, should exist in Oxford, that I laboured with other persons to enable the University to possess the means of that study, which it had not to a similar extent before. This, therefore, will show that I do not underrate the value of Anatomy and Physiology, to which Mr. Owen's life has been devoted,—certainly not. I said, just now, these are subjects which could and should be pursued with the greatest advantage at the universities; but I also said that physics and chemistry are necessary for a sound appreciation of physiology. Every year the study of precise physics, and a knowledge of chemistry, are becoming more necessary to understand physiological works, so that the older physiologists, unless they are able to bring up their knowledge of physics and chemistry to the present level, will be left entirely behind. Therefore, I am of opinion, that it would further the cause of education if physics and chemistry were first learnt at schools, so that those who came up to the universities should have the opportunity of studying physiology as an advanced subject if they came up with the necessary preliminary knowledge. Now, I may venture to remark, that these are nicely balanced questions, and it is really very difficult, without much hedging as it were on the one side and the other, to hold a very strong opinion on the subject, because boys have very different qualities of mind. For instance, Mr. Frank Buckland, like his eminent and lamented father, has very remarkable gifts for the acquisition of a certain kind of what I may call observational natural history. I do not know that their minds would have been called out to the high pitch of perfection which they attained in their department, if they had been forced to study physics and chemistry in a rigorous manner. I doubt it. It is a different quality. I do not wish to exclude the study of physiology from schools, but I do not think it is essential: I think the most essential as fundamental subjects for schools are the two which I have named. I may further add, that some time ago I published a statement, as fair as I could make it, with regard to physiology in schools, in consequence of a question which was put to me in the year 1858.

31. Perhaps you would have no objection to hand it in?—If you think it worth while; it contains, I think, all I can say on the subject. (*The pamphlet is handed by Dr. Acland to the Commissioners.*)

32. Assuming that on the whole you are of opinion that physics and chemistry might be usefully taught in public schools, at what age do you think it would be desirable that boys should be taught them?—That which is fundamental to the study of these subjects is a certain mastery of language and of thought; and as soon as ever experienced schoolmasters think that their scholars are sufficiently advanced in those preliminary studies to undertake what may be considered as a secondary branch of education, then, I suppose, they may begin. That is a question which I think experienced schoolmasters can answer much better than I can.

33. Opinions have been given before us, varying as to the age at which such studies might usefully be introduced. You think that it would be impossible to fix *à priori* any definite age, but that the individual capabilities and tastes of each boy should be taken into account?—I quite think so. I should think that positively to fix an age would be quite a wrong principle. I could quite understand the masters fixing a Form: but I am sure there is so much individual peculiarity in the constitution of boys' minds, and in their adaptation to the pursuit of different branches of knowledge—and of scientific branches of knowledge especially—I am so satisfied of this fact, that I think it requires more than the mere position in the forms. If possible, the knowledge of individual character, and the observation of the boys by the master, should fix the age.

34. Am I right in inferring from what you said, that you would not make instruction even in those sciences to which you attach so much importance compulsory in schools?—I should suppose that by far the simplest course would be to make them part of the general education.

35. In which all should partake?—I know it is not the opinion of the masters generally, and I should feel very unwilling to express an opinion contrary to their experience. I know that some very experienced schoolmasters think that it would be a very dangerous course, and that it would distract the boys from what is more essential to them; but I should not myself have thought so.

36. (*Mr. Twisleton.*) Have these schoolmasters, who have spoken to you on the subject, themselves been acquainted with the physical sciences?—I am disposed to think not.

37. (*Lord Devon.*) Passing on a little further, can you, from public school recollections, or from conversations with the existing head masters of schools, state at all the proportion of time which you think might usefully and properly, and without sacrifice of other things, be given up to these sciences. Supposing, for instance, it were practicable to give one lecture a week to a particular class in physics or in chemistry, accompanied with proper opportunities for experiments by a professor not living on the spot, going down to Eton, we will say, from London, and giving a certain number of lectures in the half-year; if that were supplemented by the assistance of any fellow workman among the assistant masters, who, being on the spot, might be able to assist the boys at those studies, should you consider such a system would be likely to produce any satisfactory or desirable result?—Yes, that plan might possibly work well. A great deal of knowledge on those subjects may unquestionably be instilled by a good teacher in a very short time. Those who are not acquainted with them often misunderstand what is meant by superficial knowledge, and overrate the time which must be expended by young men in acquiring useful and elevating knowledge of those subjects, or at all events

genuine interest in them. May I say that at one time I thought that it might be desirable to make these subjects compulsory at Oxford, and I published a pamphlet on that subject, I think in the year 1848.

38. (*Mr. Thompson.*) Compulsory on all?—Compulsory on all.

39. For the degree?—I thought and I still think that it is a national misfortune that clergymen and large bodies of men should have attained the standard of a university degree without any acquaintance whatsoever with that great department of human knowledge which is now called physical science, as is the case with the great majority of university men. It seemed to me a grievous thing, and the remedy was very simple, viz., to make them have some. Fifteen years' more experience has shown me that it is not quite so simple to make people have anything they do not wish. I had spoken in this pamphlet of the question of time. There was an argument used by the tutors that the students have no time: that is, that the undergraduates, the pass men, the average of men, have no time; "it is impossible for them to do more "than they do," they used to say. I answered thus: "They spend three years here, I should propose at the "most three courses of lectures to be attended in those "three years, no one exceeding 24 lectures. Could "they not find 24 hours a year for this purpose, and "perhaps some three hours for reading or for the "study of museums in connexion with each lecture?" And that answer of course applies equally to schools. I must say, as a physician, that being my main business now, that I really view with alarm the way in which boys are pressed now; I must ask your forgiveness for introducing an extraneous subject, but I say truly that I view with alarm the pressure which is put on good boys. I am afraid it remains to be seen 50 years hence what the effect of this system on the *physique* of the country will be. Children are surrounded by every means of cramming things into their brains, and a number of us are seeing how we can force in something more in their very earliest years. I confess I think this a matter of some anxiety.

40. (*Lord Devon.*) Following up that view, and supposing therefore that in order to introduce these important branches of science into schools in the way which you suggest, it were necessary to abandon anything, should you think that a diminution of the quantity of lines learnt, a diminution of the quantity of repetition, or of the time devoted to original composition, was well and more than compensated as regards the training of the mind by the introduction of the scientific teaching to which you refer?—I cannot doubt that; my attention has not been drawn with precision to the details of school life since I left it, but looking back to my own life, and knowing what I do of the lives of young men now, I cannot doubt for a moment that there might in some schools be a re-arrangement of their time and of the mode of developing their faculties such as your lordship speaks of.

41. It is in evidence before us that in one school 100 lines by each boy are learnt every day in the week?—I think that frightful.

42. You think that is not so useful as a training of the mind as the sciences to which you refer?—This I can answer without hesitation; I feel confident that a great deal of the learning by heart is useless: the physical sciences exercise the memory in a higher degree than anything else; at least anything with which I am acquainted. If you go over a book of human descriptive anatomy, the quantity of facts which have to be mastered are astonishing. I do not believe that boys' tastes are refined or their higher intellectual qualities called out by learning to gallop over so many lines of Virgil or Homer. It is an effort of memory, and has no corresponding effect on the character; I believe by the other study they would acquire a certain quantity of useful knowledge, and the faculties of attention and memory are quite as much exercised. Above all they are taught to think; this no amount of learning by heart can teach.

43. I have only one or two questions more to trouble you with; one is this: there is another branch of instruction to which considerable attention has been given of late, namely, modern languages. Suppose that it were a question as to the introduction of the sciences to which you refer, and the further and more systematic introduction of modern languages than at present into the system of public schools—to which should you give the preference?—I am very much afraid I must say that if I were obliged to choose I should choose German.

44. Rather than physical science, or than French?—I am afraid the German rather than the science.

45. Will you explain that?—My reason is unconnected with science: it is purely an educational one. It is a great advantage to a scientific man now-a-days to know German, and a great disadvantage not to know it. I know it very imperfectly, so I know the disadvantage. I think that the possession of an additional language in early life is so invaluable to a youth, that I would rather almost take the chance of his obtaining his scientific knowledge at a later period, when he would have the further aid of German in acquiring it. He would be enabled, for instance, to take a German book of physics when he came to Oxford if there was not a good English one. I should have great hesitation if I were forced to choose between them; but I doubt whether I need choose between them. That is an educational question, not a scientific question.

46. Are you able to give any opinion on this point, viz., whether without any material sacrifice of that which forms the staple of the present public school education time could be found for the due and proper admission of both branches?—I ought not to answer that question. I do not know enough of the details of public school life. I should suppose so from what I have heard.

47. Will you let me ask you a question on what you mentioned just now. What number of hours in a day do you think a boy can safely work, say, an average boy of 16, for a long continuance. Is it a point on which you would like to give an opinion, or not?—The late Dean of Christ Church, Dr. Gaisford, a most laborious man, as everybody knows, told me that no person ought to read more than eight hours in the day, and that he had never done so. I am quite certain that a great many boys and a great many young men actually waste their time as well as injure their health by reading too many hours, and that if they played rackets and cricket and such games more, and read less, they would acquire more, and be stronger men.

48. Should you say that seven hours a day for a boy of 15 was, taking the average of boys, an unsafe amount of work?—No, I suppose not. Very much depends on the habits of the school. It is a very dangerous question to answer, because so much depends on the way in which boys are kept to their work. At a school that I was at, a private school, we were down at seven, and we went to bed at eight, and we had an hour in which, unless in very fine weather, we were obliged to walk in an orderly way round what was called the "sweep." Occasionally in the summer we were allowed some cricket, as a great holiday. I make no doubt we should have done more work if we had had more play.

49. (*Mr. Thompson.*) Has not ventilation a great deal to do with the power of prolonged study?—Yes.

50. It makes a difference of several hours in the day?—I do not know about several hours; but it makes a great difference to the power of attention.

51. (*Lord Devon.*) I will ask you a question which I have no doubt you will feel able to answer. In order to introduce the physical sciences more systematically into public schools, of course it would be necessary to get tutors. Do you think there would be any great difficulty in getting competent men to deliver instructive lectures from time to time, to be supplemented, if necessary, by the resident concur-

GENERAL EVIDENCE.

Henry W. Acland, Esq., M.D.

19 Dec. 1862.

rence and co-operation of one of the masters of the large schools?—There may be at first a little difficulty in getting very good men, but the condition of things at Oxford will in a few years entirely remove that difficulty. There is one source of anxiety to me now in consequence of the development of scientific studies at Oxford, which is, what is to become of those men who have successfully given themselves to them? It is a grave question. Unless they become the means of access to situations of emolument, or at least of respectable maintenance, I do not know what is to become of these men.

52. Are those men, ordinarily speaking, men possessing qualifications which would enable them to act as assistant masters in our public schools in teaching other subjects?—Yes, many of them unquestionably will be.

53. (*Mr. Thompson.*) Many of the present students?—Those who are well-educated men, and who have mastered these subjects in addition to their classical training, just as formerly they mastered mathematics. May I be allowed to say that the whole of this question as regards Oxford, or as regards the Universities, is this, that intelligent men have now the means of obtaining honours in several subjects, whereas formerly they were confined to what were called classics and mathematics, and therefore these intelligent men will, according to their faculties, go out into the new lines if afterwards they can live by them. If the country provides places of respectable maintenance for such persons, there will be the persons to fill them. There will be no lack of men. As a corollary to that, or as connected with it, I should like to be permitted to say that one reason why we in Oxford were so anxious to introduce scientific studies into our old institution was, that many believed that science has been sometimes imperfectly studied, and imperfectly taught, in consequence of the deficient early education of those who are devoted to those subjects, and that the mere possession of a quantity of scientific knowledge by no means necessarily makes a good teacher, especially for boys. It is not sufficient that a person should be a good anatomist, or a good chemist, or a good dissector, or a good manipulator to make him the best kind of instructor for beginners; he may be for advanced students, but not for beginners. Now the class of tutors required will in a few years be supplied by Oxford.

54. (*Lord Devon.*) A suggestion has been sometimes thrown out, with a view to supply this want, of attaching to some of our old foundations a professor of physical science. Should you think that desirable, or would you prefer that lectures should be given by some one coming *ab extra*, who is therefore more in contact with new works, new improvements, and observations?—I hold that for these subjects and most subjects the teacher's residence in his place of work is of more importance than the occasional presence of a superior man. It is very true that the functions of the two are different, and I will not at all pretend to say that a resident second-class man will give the same educational impulse as Mr. Owen or Mr. Faraday coming down once a week, or once a month. The two things are very different, and the one can hardly supply the place of the other. You ought at all events to have a resident of some kind, and if he is to be a good one he must be adequately paid.

55. (*Lord Lyttelton.*) You were speaking about the capacity of boys. Is there any period or age which boys commonly spend at school, at which for a time their intellect becomes comparatively stagnant and torpid; a time at which the intellect rather recedes, afterwards to recover itself, and to improve?—I do not know that I can say that.

56. (*Mr. Twisleton.*) You would say that the faculties of observation may be cultivated without the physical sciences, by practical men, such as seamen and others?—Yes.

57. But in regard to the education of individuals who exercise no profession of any peculiar description, is there, in your opinion, any substitute for the physical sciences as a mode of cultivating the faculties of observation?—I suppose none, as a mode of education, and I only instanced practical men, such as naval men, to guard myself against attributing too great results to a subject in which I am much interested.

58. (*Lord Lyttelton.*) Are university emoluments, not only university honours, at Oxford, obtainable through physical science?—They are becoming more so, and although it is possible that some further legislation may be necessary, yet it is quite clear that, as every year the number of those interested in the question increases, so the place itself will do whatever is just and fair about it. For instance, Christ Church has now a physical science studentship, and it has two Readers, one Reader in Anatomy and one in Chemistry.

59. (*Mr. Twisleton.*) Are there any physical science scholarships at Magdalen?—Yes; at Magdalen there are several such. I believe that in every college there is the power of making them; and a provision for receiving persons as Fellows who are distinguished in any branch of knowledge.

60. (*Lord Lyttelton.*) Those are rewards for physical science, not by itself, but with a certain minimum of ordinary attainments?—The principle of all the scientific education, or rather, I should say, of the legislation for it, in Oxford in the last 20 years, has been to ensure that every person who is turned out of Oxford with scientific knowledge shall have been thoroughly grounded in classics. First of all he shall have passed in *literæ humaniores*. He must pass them first, and then he must also pass in physics and chemistry and physiology, if he mean to take up for honours any advanced subject. For instance, Miss Burdett Coutts founded a scholarship lately for geology. One of the regulations is that the scholar in his examination must pass in physiology, chemistry, and physics, in other words he must be fundamentally educated before he gets this prize in a special scientific subject.

61. (*Mr. Twisleton.*) Is it not the case that for clergymen it would be most valuable in a country parish for them to have had their faculties of observation cultivated at school and at the university?—Certainly.

62. Is it not the case that many clergymen, however learned, have not that influence over farmers and others which they would otherwise have, if they were intelligent in those subjects in which the farmers are intelligent?—That is often stated, and I suppose in human nature such must be the case. Might I be allowed to add that one reason why Oxford has gone to the labour and great expense of increasing its means of scientific study is found in a sense entertained there of the importance to the clergy and upper classes of England generally of more extended knowledge, in order to retain their proper relations to the lower and middle classes who have this knowledge. Those of us who had had a scientific education did not conceive it to be necessary to establish more hospitals, more schools of medicine, more chemical laboratories, excepting for the purposes of the general education to which you allude, and for the advancement of science generally.

63. (*Sir S. Northcote.*) With reference to that question which Lord Lyttelton asked just now it has been mentioned to me by more than one person engaged in the work of education, that there seems to be a period in a boy's life, perhaps about 14 or 15 when the moral character developes considerably, and there is some kind of stagnation of the intellectual progress, could you either confirm or refute such an opinion from your own experience?—No, I cannot really give any opinion about that, as a general proposition; I do not know whether the medical men attached to such schools as Eton or Harrow may be able to answer that queston; I cannot give any satisfactory answer to it, though I have noticed often enough mental changes in individuals at the age of puberty.

64. (*Mr. Thompson.*) Lord Devon asked you a

question relative to some evidence given by Mr. Owen. He specified zoology as the science that of all others he should recommend for educational purposes, from the fact that it was eminently a science of classification, and classification or method was one very large and important branch of logic, that therefore those sciences in which that branch of logic was prominent, especially zoology and botany, were those best fitted for educational purposes. Do you agree with that opinion, or have you considered the subject in that point of view?—Yes; I have paid attention to that. I hardly expect that any opinion of mine which does not agree with Mr. Owen's will be allowed much weight, but I confess that I think that those particular qualities to which Mr. Owen alludes are just as well developed at a later period, and I think that what I have stated as to the proper sequence of subjects in education is quite unanswerable: that if a person is to be a sound zoologist, he must be first a physiologist. Zoology was excluded from the curriculum, expressly excluded from the pass subjects at Oxford, not to exclude it from the University, (for we have a professor of it,) but because we considered that there must be a sequence in this case: that a person to be a good zoologist in a scientific sense must be a physiologist, that is, he must be acquainted with the internal structure and mode of action of living beings. In order to be that he must be a chemist, and in order to be a chemist he must be a physicist, and in order to be a physicist he must be acquainted with language and argument. This may be considered a theoretical view, but I cannot help it. A boy must first learn language and the use of numbers, he then is capable of studying the general laws of matter, then their further combination in chemistry, then their application in the fundamental and large principles of biology and physiology so called, and then he may go to any cognate subjects he pleases. With the best attention I can give to the subject, I really cannot make up my mind that, aiming at a sound scheme at national education, you can with wisdom reverse that order: though in practice the study of two or more may have to be carried on at once.

65. Professor Owen said also that logic might be divided into two great provinces, method, and syllogism. Is it the case that syllogism is taught to students before they come up to Oxford?—Logic is more or less taught in some schools.

66. (*Mr. Vaughan.*) When you were speaking of the choice that you would make of instruction in German in preference to instruction in physical science, was it with reference to the future utility of German, or to its power of giving discipline to the mind?—Entirely with reference to its future utility—simply for that—not the least as to the comparative effect on the mind of the two studies. But the question as I understood it was, if I was forced to choose between the two. You will remember that I objected to the choice.

67. When you speak of the necessity of a knowledge of language being imparted for the purpose of comprehending arguments before proceeding to physical science, I would wish to ask you whether that want would not be satisfied by the acquisition of the native language; English?—It might be so satisfied.

68. With regard to the intellectual pressure which you fear is being put too severely upon childhood, do you think that the same number of hours that might be rather too much if devoted only to language, would not be too much if part of it were given to outward things and instruction in their nature and properties?—A young man can unquestionably study a greater number of hours if he studies two such subjects than if he studies one; I will not say double, but a very large proportion if properly managed.

69. Do you think that the present system of public schools, considering the manner in which it excludes instruction in physical science, has at all a tendency to cut off from the profession of medicine the supply of men from the upper classes who might otherwise go into it?—The course of education at the great public schools, and as it has been conducted at the universities, is so restricted that it formerly did not occur to members of the medical profession to send their children to one or the other; and adding to this the expense, it becomes nearly impossible, and is a grave national evil. Anything, therefore, by which the general education of the medical profession can be improved, by drawing them to the best schools and the best universities in the country, will be a national advantage.

70. Do you think the fact of adding to the curriculum in the public schools and universities will directly or indirectly tend to produce that effect?—If by any means the time and the expense can be restricted, yes. I notice that gradually medical men are trying, no doubt to the great advantage of their families, but to the greater advantage of society, to give the young medical men a university education; but I must also say, that to that end we should ensure that the education given at those places is really the best that can be obtained. If you succeed in getting at the great schools of England a regular sequence of study of the best kind, to be conducted in the shortest period, and a maintenance for the student at the end, you will confer a benefit on the professional classes, indeed on all classes of the country.

71. (*Mr. Thompson.*) Are any large proportion of those students of whom you speak, as pursuing natural science at Oxford, intended for the medical profession, or for any profession in which those sciences would be immediately available?—It may be so; but this is not the object for which the late improvements have been exclusively or specially made. The object has been to provide in a great national university a sound system of scientific education, and let those use it who want it. Most unfortunate would it be, I think, if the scientific education in Oxford were so conducted as to be limited to objects connected with the medical profession. Another small medical school is not wanted in England.

72. Can you give any idea of the relative number of those students who pursue physical science, and those who give themselves up to mathematics at Oxford. Are there as many, or are there more?—I noticed that the number of students in the last examination who were going out in the mathematical school, was about 140.

73. Including "pass" and "honours"?—Yes; those who were going out in the school. I happened to count the list a few weeks ago, so I am able to answer the question, and those who went out in the modern history were about 70; those who went out in natural science were about 35. But that expresses nothing concerning either the tastes of the youths or the opportunities of instruction. It is believed at Oxford—I do not know with what truth—that the least possible quantum of work is to be got in the mathematical school, and, therefore, the pass men rush into it. They may be mistaken, but that is the current belief. This has a bearing on what I called the sequence of studies. Many of those youths had come up to Oxford quite prepared to pass the mathematical final school, and therefore had no more work to do in order to pass in that school. This is not good arrangement.

74. I ought, perhaps, to have guarded my question in this way. I ought to have asked what is the proportion of those who go out in mathematics, as compared with those who go out in physical science?—As I said above, perhaps there are four times as many in the mathematical school; but the mathematical school is a very old one, as old as the classical school. The natural science school has only been started under great difficulties, within the last eight or ten years.

75. In regard to the quality of the two classes—I mean those who go out in *scientiis mathematicis et physicis*, and those who go out in *scientiâ naturali*,—

GENERAL EVIDENCE.

Henry W. Acland, Esq., M.D.

19 Dec. 1862.

do you think those who go out in the latter are men of equal mental calibre to those who select the *literæ humaniores*, or the *jurisprudentia*?—I cannot say whether they are. I am quite sure that they ought to be.

76. That we are prepared to admit; but we wish to know your opinion about the fact?—It is a delicate question to answer. I am not at this moment an Examiner. When these examinations were first started, I felt that no persons ought to be entitled to the name of first class in science in Oxford who were not equal to the mathematics and the classics of the old standing of the old first class of Oxford. I insisted upon that in the strongest way that a man could, before the science school was started. I believe that the University is fully alive, at all events the best men are fully alive, to the absolute necessity of keeping up the scientific standard to an equal height with the others.

77. Has not the difficulty of keeping up the standard to an equal level in some cases deterred the authorities from giving the same proportion of their fellowships, and similar emoluments to persons who distinguished themselves in the school of natural science?—I cannot say it was so. If so it was a perfectly vain alarm. There is not the slightest difficulty in arranging a scientific examination so that persons only of high intellectual faculties, and well trained in the use of them, should attain the highest honours. Eminent scientific persons are generally, I make no doubt, of equal intellectual calibre with persons as eminent in other pursuits.

78. (*Lord Devon.*) Of those who attend the natural science school, and who go out in honours, are you able to tell us what proportion read for the direct employment of any knowledge they may obtain in their after professional life, and what proportion read to obtain that knowledge which belongs to educated men?—I think that a greater number of them propose to go into the profession of medicine: that in it, it is quite clear, these scientific subjects are of practical use, but that need only show that a greater number of those who intend to follow the medical profession are coming to the university. It does not necessarily show more than that. Persons who mean to go into the medical profession come to the university with that intention, and being there, they give themselves to studies which are connected with their future life.

79. (*Mr. Vaughan.*) May not it be sometimes the case that persons are determined to medicine by having become acquainted with those sciences, which they find afterward will assist them in their medical career?—Yes; I see that is beginning to take place; and I hope it may be so more and more so long as it does not tend to depress the scientific character of the studies by making them purely professional.

80. Do they take them in the first instance as branches of knowledge, and having got the knowledge observe that there is a certain and profitable application of them in the medical profession, which induces them to adopt medicine?—Certainly; and I see that with great satisfaction, for the reason I gave before, that I believe it would be a great advantage to the country, if a greater number of well-educated university men, became medical men, and they will be induced to do so, by studying those subjects now they have the opportunity, not having intended it before.

Victoria Street, Thursday, 12th February 1863.

PRESENT:

Earl of Clarendon.	Sir Stafford Northcote, Bart.
Earl of Devon.	H. Halford Vaughan, Esq.
Lord Lyttelton.	Rev. W. H. Thompson.
Hon. Edward Twisleton.	

The Earl of CLARENDON in the Chair.

Ven. R. W. Browne, M.A.

12 Feb. 1863.

The Ven. R. W. Browne, M.A., Archdeacon of Bath, called in and examined.

1. (*Lord Clarendon.*) I believe you are a Professor of Classical Literature at King's College?—Yes.

2. How long have you been so?—About 27 years.

3. You were educated at Merchant Taylors' School?—Yes.

4. How many years were you there?—About nine years and a half.

5. I believe you have examined both at St. Paul's and at Merchant Taylors'?—Yes, for some years.

6. Do you examine regularly or occasionally?—I examine the school annually with my colleague, and once a year those scholars who are candidates for St. John's Oxford. Those only form a small portion, but we examine for the prizes also.

7. Having been educated at a London school yourself, and having been a professor at King's College, as well as examiner at two London schools, I have no doubt you have been able to form an opinion as to what would be the best conditions and the requirements for a good London school, and it was particularly upon that point that we wished to have the benefit of your opinion?—Of course London schools labour under a great disadvantage, because there is no doubt, I think, that to have boys educated in the country is much better for them, as well physically as intellectually; their intellects are brighter, and the fancy and imagination are much more cultivated than they could be in London; but I think the only condition under which a good London school could be carried on is by making it as much a day school as possible, so that the boys may be living with their parents amongst better associations than they would have within the walls of the city. One great disadvantage is, of course, that they have no place to play in, except at some distance, and now, with the present facilities of communication, boys who live at home can come almost any distance within ten miles; in fact they do come from that distance by the railroads, but then of course the hours must be accommodated to them. The school cannot commence so early as public schools usually do; it must begin later, so as to give the boys time to assemble without difficulty.

8. Are you aware at what time the boys meet?—At Merchant Taylors' they meet at a quarter-past nine, and at St. Paul's at nine. Either hour is very good; perhaps the later is the better, because it gives them more opportunity of coming into town.

9. Would it not be rather difficult for a boy living seven or eight miles off to come in by nine o'clock, and to have had breakfast at home?—They do that; I think they come from as far as Richmond. They can manage that by a quarter-past nine certainly, because if the train arrives at nine it gives them a quarter of an hour to get from the train to the school.

10. Do you consider that these schools, St. Paul's and Merchant Taylors', fulfil all the conditions of a good London school, assuming that that great objection to London schools of not having a play-

ground is quite irremediable?—Yes, that is quite irremediable, and with the exception of that, as far as the instruction they get is concerned, it is of very good quality, and the best boys have many of them distinguished themselves at the Universities; but still I think that is a great difficulty to get over. They have a cricket ground at Kennington Oval, perhaps, but that is the only opportunity they have. Then they lose the advantage of mixing with one another, the self-education, because after school hours they separate and are dispersed. They have very little association with one another except during the hours of school.

11. Of course you are aware that questions have been mooted with respect to the removal of Westminster and St. Paul's schools into the country?—Yes.

12. Might I ask what is your opinion upon that subject?—I think there can be no doubt that, for the benefit of the boys who are at the school, and for the benefit of the school itself, it would be a good thing; but then you deprive large neighbourhoods, for whom they were intended, of the advantage of the school, because if the school is central the boys can come from the suburbs in all directions; but if you put it some miles on one side of London, the boys on the other side can never get there, and the trustees or governors would feel themselves obliged, I think, in all justice, to give exhibitions, or some part of the expense of boarding the boys, or else the classes for which they were intended would probably be deprived of the benefit of them.

13. Are you aware to what class the parents of boys who go to St. Paul's and Merchant Taylors' belong?—I think almost all of them are sons of professional men, clergymen, barristers, lawyers, mercantile men, military men, clerks in public offices, and so on. Some are tradesmen's sons, but I should think the majority of those who would be attracted by that education would be the sons of such as I have mentioned.

14. The greater part of whom live in or near London?—Yes. The number of boarders is very inconsiderable as compared with the number of boys, not more than one-fifth, I should think. There are boarders who live with the dames and masters, but their numbers are inconsiderable.

15. Do you think that the effect of moving those schools into the country would be to deprive those parents of benefits which they had been accustomed to?—Yes, because they get their education very cheap now, and of course that would involve the expense of boarding. If the governors or conductors of the school could pay part of the expense of boarding, so as to make it worth the while of the parents to send them, then they could not complain—but that is another thing.

16. You are aware that we are inquiring into these schools, and if there is anything which you could suggest for their improvement, we should be glad to hear it?—They have been improved gradually, year after year, as occasion arose, both in the form of education given and in the subjects which form that education, and I do not think that there is any other improvement required. I think in the London schools it does not answer to begin too early, so that boys cannot come from a distance.

17. Then, on the other hand, if they begin much later, and are retained a sufficient time in school for study, say six or seven hours a day, it would make them go home very late at night?—School should not begin later than a quarter-past 9, I think; that would cover a very large space.

18. If the school opened at a quarter-past 9?—Yes. They used in former days to begin at 7 and 8.

19. (*Sir S. Northcote.*) And then there were no railways?—No; so that the schools were limited to boys living within a very short distance.

20. (*Mr. Thompson.*) Do you know at what time the King's College School meets?—At 9, and the College meets at 10.

21. (*Lord Clarendon.*) Does not your objection apply to King's College School. Is not that rather too early?—No, I think 9 o'clock does very well.

22. And that enables boys to come from a distance?—They come from Richmond and Norwood, and places at that distance.

23. (*Mr. Twisleton.*) The school hours at Westminster begin at 8?—Yes. That is too early for a day school, and you must sacrifice everything, I should think, to the day-school principle, if you want a school to be a large school, or sufficiently large to be a public school. You cannot depend on boarders in London, because if a parent wished to send his son to a boarding school he would send him out of town.

24. (*Mr. Thompson.*) Westminster is essentially a boarding school, is it not?—Yes, but the numbers are very small at Westminster, I think, from that very reason. At Merchant Taylors' there are always more applicants than can be received. The numbers are 260; there are supposed to be 250, but there are always 260, and there are more applicants than can be received. At St. Paul's the numbers are only 153, but there are always more applicants waiting than they can take. I suppose the same would be the case at Westminster if the education is of the same kind.

25. (*Mr. Twisleton.*) At Westminster at present there are 136 boys?—Including the 40.

26. In the whole do you consider it possible that the hours of the school may have something to do with preventing there being a greater number of day scholars?—I have no doubt of it; because, at King's College, in the two departments—the purely classical department, and the one which introduces a mercantile education as well, and confines the classics to Latin—there are more than 400, besides the different departments of the College, in which there are more than 1,000. There is no reason why the number of Westminster, with all the immense advantages which it has, should be so small; it must be limited entirely to a near neighbourhood if they begin so early as 8.

27. (*Mr. Vaughan.*) Has it ever struck you to consider the removal from London of a school like St. Paul's, in an economical point of view; that is to say, how far the expenses of any removal and building might be provided for by the sale, or other disposal, of the site in London?—I have no doubt the site of St. Paul's would pay for a magnificent site in the country, because the frontage is so large, and it is in an expensive position; but the estates of the school would probably be well able to do what I mentioned just now, that is, to make the charge for boarding such that it would not be half the cost to send them into the country.

28. They might charge for board at cost price?—Yes, or less.

29. I suppose that no benefit would be really lost to the parent then?—None at all, because if a parent could keep his son in a country school at the same price as at home, I should think he would be glad to benefit by it.

30. And in case the premises in London could be disposed of at an advantage, that itself would supply building for the lodging of the school-boys?—I should think so.

31. And perhaps more than that?—More than that, I should think.

32. (*Sir S. Northcote.*) Have you reason to think that parents have any other ground for wishing to send their boys to these schools than the advantage of the cheapness of boarding and lodging them at home?—Some may like the mixture of home education, but the generality I think do not. Consider the immense number of boys that are pressing into Marlborough, which is a cheap and good education as compared to those who come to London schools.

33. (*Lord Devon.*) Those who go to Marlborough are of a different class, are they not?—No, they are

GENERAL EVIDENCE.

Ven. R. W. Browne, M.A.

12 Feb. 1863.

clergymen's sons, and there is a large number of clergymen's sons at Merchant Taylors'.

34. Those who go to Marlborough would principally be the sons of the country clergy?—Naturally the country clergy would send them near their own doors.

35. (*Mr. Vaughan.*) Is it not a disadvantage attendant on schools in London that the whole work of the day must necessarily be clubbed, as it were, within a few hours?—I think it is a very great disadvantage.

36. (*Mr. Thompson.*) Is that so at King's College School?—Yes, they finish at 3 o'clock.

37. They have no playground at all?—No; at least they have a little yard, only the length of the building, and about 50 feet in depth—not enough for playing in.

38. (*Mr. Vaughan.*) I believe it is the case now that the railroads are effecting a thorough communication through town?—They are about to do so, I suppose.

39. So that in a few years, if they thought it necessary, boys might not only come to town by a railroad, but might pass through London to another point on the outside of London?—Yes, they might do that.

40. Again, supposing that that sort of communication were not effected, and there were more than one school removed from London, might they not be so disposed as to meet the wants of the suburban population on both sides of town?—I should think they might.

41. (*Mr. Thompson.*) Dulwich is an instance in point, perhaps?—Quite so.

42. (*Mr. Vaughan.*) And both would remain open to the population of London?—Yes.

43. (*Lord Devon.*) Am I correct in inferring from your observations that your view is that in the case of any school of considerable numbers, in London, it should be a school for day boys and not a boarding school?—What you would consider would be its being a day school. Of course you would take boarders if they were willing to come, but you should legislate for it as a day school.

44. I think you base that observation partly on the want of a playground. No doubt you are aware that at Charterhouse, and still more at Westminster, they have not only a playground, but, in the case of Westminster, the river Thames open for them. That probably would lead you to entertain some doubt as to the general applicability of that position to those two schools?—I do not object to that position, but I think no one would send their sons to board at Westminster. If they sent them it would be as day boys. Therefore, if you give facilities for day boys coming, you would probably have the number at Westminster much larger.

45. (*Mr. Thompson.*) You mean no one living in London would send his boy to board there?—No; and if he had to send his boy at 8 o'clock in the morning, probably the habits of the present day would not allow him to send him at all.

46. He would probably be the first person up in the house?—Yes.

47. (*Lord Lyttelton.*) When you say you would legislate solely for day boys, but allow boarders to come if they choose, you mean if they choose to come as at St. Paul's and Merchant Taylors', quite extraneously to the administration of the school, without the authorities of the school being in any way responsible for it?—They are under the control of the school at the places you mention. Only certain dames are licensed, or at least permitted by the head master, and the others are taken by the masters themselves.

48. Not at Merchant Taylors'?—Are they not?

49. That is not according to our evidence. I think at St. Paul's, but certainly at Merchant Taylors', we were told that the authorities know nothing about it. If they chose to board near the school of course nobody would object. You refer to it as existing in the constitution and system of the school?—I mean that what you have to do, if you want to make the school available for the largest numbers, is to think of the boys as day boys, and make it convenient, so as to attract boys whose parents live in London or the neighbourhood.

50. Would you provide in the constitution for the houses in which boys might board being put under the regulation of the school authorities?—I think that would be a very desirable thing.

51. (*Mr. Vaughan.*) Is not there a time at both those London schools, in the middle of the day, when the boys are almost like sheep without a shepherd?—Yes, there is an hour at least at St. Paul's; Dr. Kynaston has a dinner at 1 o'clock to which many of the boys go, then they are taken care of and have a room of their own for that hour; but if not they would be running about anywhere. That evil is counteracted at King's College school by their going on *en masse* and stopping at 3 o'clock, and then going home. There is very little space between—I forget how long, but not longer than is necessary for luncheon.

52. (*Lord Clarendon.*) Where did they get their luncheon?—There is a regular college hall there, and dinner for the school at 1 o'clock at a very cheap rate—I think it is 4*l.* a term.

53. For the school?—Yes; the college have a hall dinner at 5 o'clock, I think that is 5*l.* a term, but you will see in the calendar what the exact price is.

54. Those are for day scholars?—Yes; at least there are rooms in college for students of the college, but the majority of the boys in the school live at home.

55. If it breaks up at 3, and there is a dinner at 5, what do they do between?—In the college the lectures are going on, probably, but the school hours are over at 3.

56. That is six hours?—Yes, with about half-an-hour break, I should think, between.

57. What is generally the age of the boys at the school?—I suppose from 10 years old upwards to 18—the same as at a public school. Some go straight from the school to the university, others come into the college for a year or two years, perhaps, and then go to the universities—these leave at 16.

58. (*Sir S. Northcote.*) What is the distinction between the college and the school?—They are quite separate. The system in the college is just like that in the universities—the lectures are very much the same.

59. (*Mr. Thompson.*) Except that they are better attended?—They are very seldom absent, certainly.

60. (*Mr. Twisleton.*) I presume you have no doubt that if a parent has the means it would be desirable for him to send a son to a school in the country?—Yes.

61. But whatever provision there may be made for sending sons to school in the country, is it or is it not the case that there would necessarily be, in a large metropolis, a large class of fathers who from economical motives would wish to send their sons to a town school?—No doubt; and also there may be a class—I daresay there is—who like to have their sons at home a part of the time, and combine the two modes of education.

62. You are acquainted probably with some persons who have expressed those ideas to you?—Yes, no doubt there is a feeling of that kind; I think you must have some schools in London itself. The City of London School, for example, is a school of that kind, and I suppose there are 600 boys there who are the sons entirely of the trading classes.

63. (*Mr. Vaughan.*) Do you think, considering the number of boys at Westminster and the other London schools compared with the number of such schools, there does or does not seem to be a waste of instructional power centred in London?—I should think not, because I should think so many more would

take advantage of that same power if there were opportunities.

64. I mean at present in London; considering the number of schools compared with the number of boys who attend those schools, do you think there is or is not a waste of instructional power?—No, I should think not; they are not over-mastered any one of them.

65. I was speaking of waste with regard to the number of schools rather than with regard to the number of masters?—No, I should think not. I should think London ought to support a great many more schools than it does, if the inhabitants took advantage of them, because I suppose many parents of the trading classes like to send them to private schools away from them in the country.

66. Are not 116, 136, and 153 small numbers to make up the total number of boys in three such well-endowed schools as Westminster, Charterhouse, and St. Paul's?—Yes, too small, but then they might be increased very much indeed, I think; for instance, the numbers at St. Paul's would be doubled if there were double the number of presentations given, only the trustees cannot do it, they have not room for it.

67. (*Mr. Twisleton.*) Then, in the case of Westminster, you think the hours are prejudicial to their having large numbers?—I should think so, certainly. I should think Westminster might be trebled or quadrupled.

68. If the hours were favourable to fathers who wished to send their sons to a school in London?—Yes; and then, again, advantages are confined to a particular class of boys. At these great London schools every boy who enters has a right to the advantages of the foundation; at Westminster they are confined, I think, to the Queen's scholars. At Merchant Taylors' every boy who enters has a right, if he can work his way up to the top in time, to get his scholarship at St. John's.

69. (*Lord Devon.*) It is true that at Westminster those advantages are confined to those on the foundation, but you are probably aware that that foundation is open to anybody who can succeed in the competition?—Yes, but they are obliged to be boarders, they are obliged to live in the place.

70. I think they are not necessarily boarders?—I believe so, if they are on the foundation.

71. (*Mr. Vaughan.*) Are you aware whether the payments for instruction, by the boys or their parents, at Merchant Taylors', used always to be as much as they are at present?—They used to be not so much, but the extra expense now is more—such as teaching arithmetic, mathematics, and so on, which must now be paid extra for. They did not teach them. They only taught Latin and Greek in former days. They have added some additional fees in order to pay arithmetical, mathematical, and French masters.

72. Have you ever made a computation of how much the boys have themselves to pay for their education at Merchant Taylors', and how much the company pays?—No. The boys do not pay more than 10*l.* a year each. I do not know exactly what it is, but certainly it is not more than 10*l.* a year. At St. Paul's they pay nothing.

73. That is in addition to certain other fees, I think, which raise it somewhat above that; for instance, certain fees on their removal from and entrance to each form?—Those fees are very slight, I think. I do not think the total can be more than 10*l.* a year.

74. (*Mr. Twisleton.*) What is the number of boys at King's College School?—I should think about 400 in the two divisions. There are two divisions in the school.

75. Will you explain the two divisions?—In the one division the system is exactly like that of the old public schools; it is a classical school, in fact. In the other there is no Greek taught. Instead of that they have mathematics, French, and German, and so on, to fill up the place that the Greek would occupy.

76. Are there many tradesmen who send their sons to that school?—I should think there would be; I do not know.

77. Have you reason to believe that they are well taught French and German?—I believe they are very well taught.

78. Would a boy who leaves at 18 be able to speak those languages?—I do not know whether English boys ever can do so after leaving school, but at least they would have all the advantages they would have in any other school.

79. (*Lord Clarendon.*) Do you consider that a boy would leave the King's College or the Merchant Taylors' School as well grounded in classics and with as much scholarship as boys from the other great public schools?—I should think fully so.

80. You would say that a boy would go up from King's College well grounded in classics?—Do you mean from the school?

81. I suppose they do not go from the school to the university?—Yes, they do. They go from both, in fact.

82. Then I will ask you from both?—Yes; I have had, I suppose, more than a hundred men who have taken first or second classes at Oxford or Cambridge.

83. From the school and college?—From the college, but many have done so from the school.

84. Do any go straight from the school to the university?—Yes, and they get scholarships there, Balliol scholarships too. It is just the same education as at any other public school.

85. There is not quite the same time devoted to classics as at a public school, and there are other branches of knowledge that are paid more attention to?—Yes; but still I do not think that interferes with their classical proficiency at all, because we have had so many men who have obtained distinctions in it, as you will see by looking at the calendar.

86. (*Mr. Vaughan.*) Have you not had some men who have come very near indeed to obtaining if they have not actually got the Ireland scholarship at the university?—I think it is very likely. I think we have. We have had an immense number of fellows, tutors of Trinity College, Cambridge, and of nearly all the colleges, and two of the censors of Christchurch. In fact, there have been, I should think, more than a hundred whom I have myself had under me, first and second class men and prizemen.

87. (*Lord Clarendon.*) At Oxford?—At both Oxford and Cambridge.

88. (*Mr. Vaughan.*) What Greek and Latin grammars do they learn at King's College School?—I think they have grammars of their own; I think Dr. Major edited them; but they are much like the Eton grammar. In the college we let them use whatever grammar tney have been accustomed to. They use Jelf's grammar more than any other.

89. That is a grammar for one who is becoming a mature scholar, is it not?—That is the case. The others would only take the grammars they had been accustomed to use at their schools, as they would at Oxford and Cambridge.

90. Do you happen to know whether the Greek grammar used at the school is written in English or Latin?—It is written in English.

91. Is that found to work well?—I believe it does; I myself prefer the other.

92. On what principle do you prefer the grammar written in Latin?—I think it sticks by a man more; you never forget it.

93. Do you think that a boy, when he learns the language, understands it as well?—I do not suppose he does, but he does not understand any grammar then.

94. Do you think, if a sensible Greek grammar were written in English, that the higher degree of understanding with which he would grasp the language would not compensate him for the loss of that adherence to his mind afterwards which you speak of?—No, indeed I do not. I think it is very useful,

GENERAL EVIDENCE.

Ven. R. W. Browne, M.A.

12 Feb. 1863.

and in fact the examples stick by him so well in after life.

95. Do you think it does not produce a bad habit of mind to commit to memory such a sentence as this, "Præsens est thema et fundamentum"?—I never found any disadvantage myself, and I think all our best scholars have gone through that discipline.

96. (*Mr. Twisleton.*) Do not boys interpret that to mean that they deduce all other tenses from the present?—I should think so.

97. They understand it enough for that?—Yes.

98. (*Mr. Vaughan.*) Do you not think there are a great many boys who would long carry that sentence in their mind without attaching any distinct idea to the word "*thema*," or "*fundamentum*"?—I think the moment they understand it they never forget it. I must say that I like the old Eton grammars very much indeed, and I believe they have been at the *fundamentum* of a great deal of our best scholarships.

99. (*Sir S. Northcote.*) Do you think it desirable, if it could be done, to have one elementary grammar in use in all the schools?—I think that would be very important. I think it is very uniform now. Wordsworth's grammar and King Edward the Sixth's grammars are the Eton grammars in reality.

100. (*Lord Devon.*) Are you personally cognizant of the system of King's College School?—No, I have nothing to do with it.

101. As to the two divisions in the school, supposing a boy to be admitted to King's College School, is it open to his parents to decide whether he should go into the one division or the other?—Yes; he may be entered in either.

102. If he is entered in the one division he goes on in the ordinary classical course, with mathematics, I presume?—Yes; but still Greek and Latin form the principal part of his education in the classical school. The other is more of a mixed character. That would be for civil engineers, mercantile men, tradesmen, or men going into the army.

103. If he goes into the other division, Greek is not attended to?—Not at all.

104. But Latin is?—Yes.

105. Are modern languages attended to in both?—Yes; but more so in B division, because there is more time for it. The time that is given to Greek would be given to modern languages.

106. Do modern languages include German as well as French?—Yes.

107. The two divisions, I suppose, have each their first, second, and third class?—Yes.

108. And are, in fact, distinct schools?—Yes, with distinct head-masters.

109. They have no common head, then?—The head-master of the classical school is considered head-master of King's College School; but Mr. Fearnley, who is the second master, is really the head-master of the second division. He would not be interfered with.

110. Is there any other link, or bond of union, or connexion between these two schools, except that they are under Dr. Major?—I think not. They are all under the Principal of King's College, and fall in one groove.

111. They have separate prizes?—Yes.

112. And separate examinations?—Yes, they would be examined separately; whether by the same examiners or not, I do not know.

113. In fact they are almost two distinct schools?—Yes.

114. (*Mr. Twisleton.*) Do you know the proportion in each division?—I think they are very nearly equal. The demand is about the same.

115. Are the persons generally of a different class who require their sons to go into the one and into the other division?—It depends on the object. It depends whether they are going to the universities or to other professions. King's College School is more expensive than Merchant Taylors' or St. Paul's—I should think more than double.

116. As you have been at Merchant Taylors' have you any suggestions to make in reference to Merchant Taylors' School?—No; indeed I think there have been so many improvements gradually taking place, year after year, that scarcely anything remains to be done.

117. (*Mr. Vaughan.*) Do you know from whom those improvements in Merchant Taylors' School have emanated?—I should think principally from Dr. Hessey.

118. From suggestions of his?—Yes. He takes a great deal of pains with it, and is a very able man.

119. (*Lord Lyttelton.*) In fact it is a very good school?—It is, in fact, the best school in London. It is a very good school indeed. The boys do their work remarkably well, and great pains are taken by the masters.

120. (*Mr. Vaughan.*) You have a peculiar source of knowledge as to the state of some of the London schools, have you not, as examiner?—Yes. I have examined at both Merchant Taylors' and St. Paul's for some years, so that I see the work of the boys from year to year, and a great deal of it is due to the teaching. The work is proportioned to their standing in the school, and they gradually improve from form to form. You can see the growth of the boys.

121. (*Mr. Twisleton.*) Have you any suggestions to make with reference to St. Paul's School?—No; it is not my duty to interfere with the internal management of it. I think the system is a very good one.

ANALYSIS OF THE GENERAL EVIDENCE.

[*** The Names of the Witnesses are in Alphabetical Order. The Figures refer to the Numbers of the Questions in the Minutes of the Evidence of each Witness.]

ACLAND, HENRY W., Esq., M.D., page 405.

Is Regius Professor of Medicine at Oxford, also Clinical Professor; was for the year previously Lee's Reader in anatomy, and during the whole period teacher of anatomy and physiology, besides having the exclusive charge of the physiological collection at Christ Church; having moreover been educated at a public school, namely, Harrow, has had means of forming a judgment of the training in physical science of the young men who come to the University; 1–4. The present age is one of transition, and the young are just beginning to appreciate the advantage of scientific study, which Oxford now for the first time holds out; 5–7. The chemical class at Wellington College is going on well; 8. Scientific knowledge is of great use, and it might be stimulated by the Universities requiring proficiency in it; difficult to fix test; at Oxford, on his recommendation, it was made law that to enable any person to pass in science he must pass in physics, chemistry, and general physiology, or two of them; 9–12, and 55–57. Defines "physics" as fundamental to all natural science; 13, 14. Matriculation examinations in natural science at the London University; none such at Oxford; natural science taught in the Schools; 18–23. Scientific studies an important part of mental training; 24, 25. Every thing necessary for scientific progress at Oxford, except the good will of some of the teachers of the classics; the study is voluntary, and he is scarcely prepared to say that he wishes it to be made a part of the curriculum of University education; 26–31. Is unable to state the age at which boys should begin physics and chemistry in the public schools, but thinks it a matter for the individual schoolmasters; knows that many masters are averse to the introduction of physics and chemistry into the schools, but is disposed to think these generally unacquainted with physical science; 32–36. Opinion as to the supplemented plan of teaching science by lecturers' Assistant Masters favourable; thinks science should be compulsory on all at the Schools; gives the reason, and indicates what he wishes to have done, and how he would find the necessary time; 37–42, and 51, *et seq.* Speaking educationally, prefers further time being given to German rather than to science; 43–45, and 66, 67. Is told, however, that time may be found for both; 46. Is apprehensive of the effect of the present system of cramming the boys on the *physique* of coming generations 50 years hence; Dr. Gaisford the late Dean of Christ Church, a most industrious man, was of opinion that no person ought to read more than eight hours a day, and witness is of opinion that, with more of cricket and rackets and less of reading and study, many boys would become at the same time stronger men and better scholars; boys do more work with more play; 39, 47, 48, and 68, 69. Effect of ventilation on the power of attention and prolonged study; 49, 50. In a short time Oxford will remove all difficulty as to the supply of properly qualified teachers of the natural sciences; 51–53. University honours and emoluments and general prospects of teachers; 58–61. Gives a general preference to a resident professor of physical science over the occasional visitors *ab extra*; 54. Growing recognition at Oxford and throughout the country of the importance of the cultivation of science; 55–62. Opinion on the preference to be given to zoology on account of its logical tendency, how far coincident with that of Professor Owen; 30, 31, and 64, 65. Anticipated result of the introduction of science into the public schools and Universities on the medical profession; 69–71, and 78–80. At Oxford the number who go out in mathematics is four times that of those who go out in physical science, but then the mathematical school is as old as the classical, and the natural science school has only been introduced during the last eight or 10 years, and then under great difficulties; besides which there is a rush to the mathematical school by the pass men owing to a prevalent notion that this school involves the least amount of work; the natural science men are of equal intellectual calibre with those eminent in other pursuits; 72–77.

AIRY, GEORGE BIDDELL, Esq., F.R.S., page 401.

Has been Astronomer Royal 27 years, is a Fellow of the Royal Society and the Royal Astronomical Society, and is also connected with other scientific institutions; 1—4. Is of opinion that the preparation at schools for the Universities, with the exception of Latin and Greek, is very imperfect, on scientific subjects it is almost nothing; 5–9, and 17–19. The scientific education at Cambridge is almost confined to pure mathematics and bears the impress of the examiners, who are generally young Masters of Arts, their mathematics being those of speculative men who know very little of practical science as pursued out of the Universities; the teaching at Cambridge of what is taught is exceedingly good; 10–18, and 49–53. Would like to see freshmen have a good deal of the mechanism of mathematics, in which he would include algebra as a very important element of minor training; 19, *et seq.* Shown a book describing the requirements of the London University matriculation examination, expresses his opinion that they are far too high for a boy of 16 or 17; 25–29. Describes the mathematics proper for a boy of 18 to have learned on leaving school; arithmetic and algebra should be pretty well taught, including quadratics, scarcely one book of Euclid, trigonometry, a general knowledge of mechanics and hydrostatics, but not conic sections, but this limited list of subjects should be fully learned; he would also require a general aquaintance with several physical subjects such as electricity and chemistry; 30–40, and 55–57. Doubts whether the mind of such a boy is powerful enough to grasp the sciences of classification such as zoology and botany; 41–46. If a boy had a good deal of his time taken up with a number of the "ologies" his mind might be drawn off from the severer work of the classics; 47, 48. The applied mathematics taught in Germany with much more effect than in England and France; the German and English Universities compared; the Germans cannot understand the importance we attach in England to the social education of the University as distinguished from the book learning; 54–63. So, with regard to our public schools; illustrative anecdote; 67–77. In pure mathematics England stands very well; 64–66. It would not be incompatible with social education to give good instruction; thinks the mechanism of mathematics can be learned in school, also algebra, but not the demonstrations of geometry; 78, 79. The mathematics that he would like to have taught in schools during four or five years would require only an hour or two a week; anecdote in illustration; 80–84. As three or four hours a week are at present devoted to these subjects, without producing the required result, there is probably something defective in the mode of teaching; 85–87. Has an impression that the Woolwich examination is pitched too high; 88–91. There is nothing to prevent a boy going to the University with the amount of knowledge indicated, from obtaining a place among the first six wranglers, or even being a senior wrangler; 92–94. Value of knowledge, extra school training, and thinks that an exhibition of some of the most remarkable physical sciences in the schools would be generally useful, although only a slight knowledge might be obtained of them; 95–100. Cannot express the great importance which he attaches to the classics, and would not on any account disturb classical learning as the basis of English education at our great public schools, but sees no difficulty but rather great advantage in superadding mathematics and good scientific knowledge; 101–105.

BROWNE, Rev. R. W., Archdeacon of Bath, page 412.

Was educated at Merchant Taylors' for 9½ years, has since been Professor of Classical Literature at King's College 27 years; examines the School annually with his colleagues for the prizes; and also those scholars who are candidates for St. John's, Oxford; 1–6. Asked his opinion as to the requirements of a good London school, he replies that London schools labour under a great disadvantage, because in the country the boys are better physically and brighter intellectually, while their fancy and imagination are more cultivated than in London; but a London school must be principally a day school, the boys living at home with their parents, and having to come to school often by rail from distances up to 10 miles necessitates that the School should commence later than is usual at public schools, the time at St. Paul's being nine and at Merchant Taylors' a quarter later; with the exception that the playgrounds are necessarily absent, the boys going only occasionally to the Kennington Oval cricket ground, those schools fulfil the conditions of good London schools; the boys receive a good education, and the best have distinguished themselves at the Universities; the day boys, however, lose the advantage of self-education by mixing with each other out of school hours, because after school hours they separate and go home; 7–10. Knows that the question of the removal of Westminster and St. Paul's schools into the country has been mooted; thinks the removal would be advantageous, excepting that the present localities would be deprived of the benefits of the day schools; 11, 12, 15–56, and 60–70. The boys educated at St. Paul's and Merchant Taylors' are almost all sons of professional men, clergymen, barristers, lawyers, mercantile men, military men, clerks in public offices, with a few sons of tradesmen, the greater part living in or near London; the boarders who live with the dames and masters are incon-

GENERAL EVIDENCE.

BROWN, Rev. R. W., Archdeacon of Bath—*cont.*
siderable in number, perhaps not exceeding one-fifth of the whole; 13, 14 The effect of the removal to the country would be to deprive the boys of their present advantages, unless the governors or conductors would pay part of the expense of boarding them; 15. Is satisfied with the improvements in education already made, and is unable to suggest anything in addition; 16, and 116–121. Advantages and disadvantages of the early and late opening of the London schools; 16–23. Numbers of boys at the public day schools; 24–26. The great value of the site of St. Paul's might meet the expense of removal, and the estates enable the Masters to pay a portion of the boarding; the cases of Marlborough, King's College, Dulwich, &c.; want of playgrounds in London generally; the subject of removal pursued at length, including boarding-house arrangements, and the present practices as to the day-boys' luncheons and dinners, early and late school hours; 27–56. Age of the boys at King's College, and the lectures there; 57–59. Expenses of education in some of the metropolitan schools; 72, 73. King's College School described; there is the classical school, and another where mathematics, modern languages, &c. are substituted for Greek; 74–78, and 100–115. Boys from King's College and Merchant Taylors' are as well grounded in scholarship as boys from other schools; 79–87. Grammars used at King's College; opinion as to the desirability of a Greek grammar for English boys being written in Latin or English; 88–99. Thinks St. Paul's School a good schoool, and has no suggestion to offer for its improvement; 120, 121.

CARPENTER, W. B., Esq., M.D., F.R.S., page 363.

Has been registrar of the London University six years; is also a member of the Council of the Royal Society; 1–3. Books he has written; 53–56. Describes in detail the extent of the elementary knowledge of the physical sciences required for matriculation at the London University; 4–7. There are, three faculties in the University,—arts, science, and medicine —but the same entrance examination is required of every candidate whatever his ultimate destination; 7, 8. Modifications in the examinations; 42–44. The number of candidates is increasing; last year the number was about 480, of which number two-thirds passed and one-third were rejected; 45–48. The rejections in science were about on an average with those in classics, mathematics, and other subjects; 49–53. Few of the candidates come from Eton, Harrow, or Rugby, a good many come from Marlborough College, but most come from the proprietary and private schools, and they are generally prepared to pass the matriculation examination in science as well as in other matters; 9, 11. Is aware that in some of the schools, *i.e.*, University College School, there are regular courses of instruction in science to prepare for the University matriculation, but cannot speak with certainty as to the general body of proprietary schools; 12, 13. The matriculation examinations in classics at Oxford and Cambridge vary in the different colleges, it being very slight in some while at Balliol it is very severe; at the London University the matriculation examinations are as severe as the senior middle-class examinations of Oxford and Cambridge; 14–19. High character of the London University medical graduates; 20, 21. Physical science trains a class of mental faculties left untouched by both classics and mathematics; conceding the importance of both classical and mathematical discipline, he knows from experience that the want of scientific and mental training is the source of a vast amount of prevalent misconception among men of high literary cultivation and high mathematical attainments, especially with regard to the value of testimony regarding the reputed phenomena of mesmerism, spiritualism, &c.; 22–24. Is in favour of commencing with scientific teaching at an early age; a boy of 10 is capable of understanding a very large portion of natural philosophy; from his own experience believes that this does not militate against the sustained attention required by the classics and mathematics; 25–32, 63, 64, 75, *et seq.* Believes that the time devoted to classics at an early age may be advantageously diminished; has seen instances in which boys beginning early had no classical attainments beyond those of boys commencing late; gives an instance in one of his own sons. The beauties of a classic author cannot be understood at an early age; 33–41, 67, 68, 71–74, 88, *et seq.* Values highly a philosophical study of language; one does not know the value of language till he has tried to express his thoughts in a language other than his vernacular; 36–41. With respect to himself, states that his own taste for science was awakened at school at an early age, when great curiosity exists as to external objects; 54–57, and 69, 70. Observed at school that while some boys showed an aptitude for classics, others showed a similar aptitude for mathematics, others again for physical science; thinks it an evil that a boy should be obliged to devote most of his time to a subject which he dislikes to the neglect of that for which he has an aptitude; family instances; 58–62. Thinks the mental faculties are more apt for early exercise on natural science than upon grammar and mathematics, since it is easier to fix a child's attention on what it sees than upon an abstraction; consequently regards the natural sciences as the best subjects for the earliest mental training; 65–57, and 69, 70. Physiology taught later; 75, *et seq.* A mixture of physical

CARPENTER, W. B., Esq., M.D., F.R.S.—*cont.*
science with literary studies beneficial to both; no mental training can be adequate that is one sided, and all experience shows that a change of studies is a positive refreshment to the mind; 81–86. Much inquiry is going on with regard to the number of hours which can be healthfully employed on study in the National and British schools, and there is a general conviction that the maximum time is four hours; but in that case a child of an educated stock, with an inherited aptitude for intellectual pursuits, might work eight hours; 82–87. Questioned whether a boy beginning science at a late period of life might not make up for lost time as well as a boy beginning late at classics, the witness replies in the affirmative, but adds that the natural period for commencing studies should be according to the development of the faculties, and is quite certain that the faculties of observation are developed before those of reasoning; 88–93, and 104, 105. The subject pursued; 96, *et seq.* Curious instance of the effect of the Eton strictly classical system during the pre-mathematical period, in the case of a young man who did not know enough of the multiplication table to find the price of several pairs of stockings which he had purchased, except by adding the price of the first to that of the second and the total to that of the third, &c.; 98–100. A recommendation of the Council of the Royal Society in 1857 since carried out in the establishment of the Department of Science and Art; 106. Is fully aware that at our public schools the professed object is to train the mind; some of the schools consider that they adopt the best possible means to that end by the study of classics and mathematics, but the exclusion of science prevents the development of faculties not touched by classics and mathematics, and which consequently lie dormant; 107–111. Repeats that too much time is devoted in the public schools at an early age to the classics; and if this were diminished the pronunciation of modern languages might be more attended to among the younger boys with great advantage; 112–113.

FARADAY, MICHAEL, Esq., F.R.S., page 375.

Was for 20 years lecturer on chemistry at Woolwich for the Government; is one of the originally nominated senate of the London University; has been in the habit of lecturing at the Royal Institution for many years; also of giving juvenile lectures; 1–5. Not being an educated man, according to the usual phraseology, and therefore not being able to make a comparison between languages and natural knowledge, but regarding it only as a means of conveying thought, thinks that the fact of conveying knowledge of the physical sciences which has been so abundantly given to the world during the last 50 years should not be conveyed to the young in public schools, a matter so strange that he finds it difficult to understand it; 6. Habit and prejudice arising from pre-existing conditions are the causes; 9. The opposition, however, is breaking away; there are good, strong-minded, willing men at work to promote education in these things; they are knocking, there is a prospect of the door being opened, and it must be opened, or England will stand behind other nations in the mode of education; 6, 11. Gives instances, in connexion with the light-houses of England and France, of the superiority of the French common man over the English; the ordinary intelligent workman so common in France can hardly be found in England; 12–23. Hands in a lecture delivered at the Royal Institution before Prince Albert, in 1855, on the subject; 18. Mathematical and classical attainments spoken of; 24–26. "Training the mind" is an indefinite phrase; the highly educated men are those who are continually asking simple questions in chemistry or mechanics, and showing themselves as far from the power of judging of these things as if their minds had never been trained; they require to learn the A B C of science as much as or more than children; exclusive attention to literary studies seems to create a tendency to regard other things as nonsense, or belonging exclusively to the artizan, so that the mind gets to run in a particular groove, from which it does not easily extricate itself, and is really injured for the reception of real knowledge. Who are the men whose powers are really developed, who made the electric telegraph, the steam engine, and the railroad? Not the men who had been taught Latin and Greek; the Stephensons had that knowledge which has been habitually neglected in the public schools, and been pushed down below; 27–31, 55–57, and 74, *et seq.* Asked how he would effect the changes he considers desirable in our system of education, says he finds it difficult to reply; it requires a good man of business, a man educated up to method, and with a knowledge of all things needful in a good education, so to arrange, as in the University of London, that a large knowledge of things in general being required on matriculation, the literary man, the physical man, the medical man, and other classes should, as soon as possible, separate and go to their own special kinds of education; 32–39. Boys might begin to learn physical science very early if there were competent teachers, a class to be yet created, but might be done without difficulty by encouraging natural knowledge and gradually introducing it into education; 40, 41, and 46, 47. Unable, from want of knowledge, to compare the training power of classical with physical instruction, he yet thinks that nothing can be so competent to make a young mind think, and logically too, as the action of natural laws; 42–45, and 55–57. Supposing physical science were introduced, say at Eton, he would

FARADAY, MICHAEL, Esq., F.R.S.—*cont.*

teach all boys of ordinary intelligence, and 11 years of age, all those things that come before classics at the London University, namely, mechanics, hydrostatics, hydraulics, pneumatics, acoustics, and optics; 48–50, *et seq.*, 68, *et seq.* Mode of teaching natural science; 51–54, *et seq.*, and 67, *et seq.* Time he would devote to it, speaking very generally, would be about one-fifth of the whole time devoted to the studies of the school; 58, *et seq.* In half a century probably more time still will be given to natural science; 66. Reverting to the subject of classical training and its effect, the witness states that men of high education come to him and talk about mesmerism, table turning, flying through the air, and so on, notwithstanding their classical training; the system of education that can leave the mental condition of the public body in this state must have been greatly deficient in some important principle; and nothing, he believes, but a knowledge of natural laws and natural science will ever clear their minds from those most absurd inconsistencies; 75. The study of the physical sciences would not only last through the period of school years, but, like education generally, would never be exhausted; proficiency could be tested by examinations; 76–81. The classics as connected with scientific nomenclature; 82–91.

HOOKER, J., Esq., M.D., F.R.S., page 382.

Was educated at the High School, Glasgow; 55–59. Is Fellow of the Royal Society, Assistant Director of the Botanical Gardens at Kew, and author of "*Travels in the Himalaya;*" 1–3. During the last 20 years hardly a day has passed without his hearing expressions of regret, personally and by letter, from members of the upper and middle classes, of their ignorance of botany; the letters chiefly relate to the use of fibres for yarns and paper, and indicate great scientific ignorance; 4–10. Has considered the neglect of this important study a matter of national regret; 12. Has turned attention to the possibility of teaching botany to boys at School in classes, and feels that it might be done, and the present deficiency easily remedied; 13. Professor Henslow, his late father-in-law, professor of botany at Cambridge, introduced botany into the lowest possible class of schools, one for village labourers' children in Suffolk, from 8 to 12 years of age; details of the school; no difficulty experienced; the experiment completely successful; Professor Henslow was of opinion that the study of botany had considerable effect in the general development of the children's mind; such was also the opinion of some of the inspectors of schools; 14–32, and 67–69. Practical result of this teaching on the village girls in after life; 98–99. In the case of medical education has remarked the beneficial effects of learning sciences of observation as a training of the mind; 33, 34. Thinks mathematical training rather than classical produces a tendency to receive other knowledge; 35. Does not say that classical training is not beneficial, but would place the classics lowest, mathematics next, natural history first, because a child of eight or nine can with pleasure and profit begin natural history when mathematics would injure the mind, and, further, is applicable to minds without capacity for mathematics, at a time, moreover, when learning a language might be irksome; 36–39. Medical students scarcely ever bring any physical science from the schools; the want is much felt in the profession; the botany and chemistry required by the medical man might be as easily obtained at school as while passing through his medical curriculum; that it has not been so obtained is a prevalent matter of regret; he never knew them regret their classics or their mathematics, quite the contrary; but they do regret very much that their faculties have not been trained to habits of observation, so necessary for them in going round the hospitals; 40–47. A general feeling prevails amongst them that the study of physical science, especially botany, might have been added to the other studies without injuring them; while conducting for several years the army medical examination for the East India Company's service, the majority of the questions not answered by the candidates were such as would have been answered by the children in Professor Henslow's village school; moreover, in most of our medical schools botany is very imperfectly taught; 48–54. A strong appreciation of the value of classics and mathematics in medical education is universal in the profession; 60–66. Opinion that botany might be taught nearly as well in London as in the country; Professor Henslow's opinions and books relative to botany as applied to education; 67–80. Botany less popular than chemistry, owing to the brilliancy of chemical experiments; 73, 74, and 80–87. Thinks it a great hardship that a school boy having faculties of a particular kind, such as an aptitude for the natural sciences, should have those faculties wholly neglected; it would be morally injurious to him to be regarded as stupid because he had no talent for languages; the same boy, with an opportunity of cultivating the natural sciences, would be likely to become a useful member of society; 88–91. Thinks there should be more of variety in the education of children, more of concentration in the studies of after life; did not lecture on this subject to the royal children, but accompanied his father-in-law, Professor Henslow, who did; Prince Albert was strongly in favour of making acquaintance with natural science part of the education of boys, and expressed his regret at its neglect in England; 92–97. Has had a medical education, and is

HOOKER, J., Esq., M.D., F.R.S.—*cont.*

incidentally acquainted with the medical profession; believes that very few of the medical profession have been to the English Universities, and not many to the great public schools such as Eton and Harrow; 100–104. The classics, however, are not going out of use in the profession; the classical examination is more strict than it was 20 years ago; the classics have increased in value, more probably for the sake of the discipline and the proof it gives of mental culture than for the sake of the medical literature in the classic languages, as all that has been written by famous anatomists and physiologists has long been embodied in the vernacular of the chief European languages; 105–112. Cannot say whether superadding the physical sciences to the valued languages in the public schools would attract thither more of those who intend to resort to the public schools; as a general rule, the profession is recruited from the middle and lower classes, who do not send their sons to the public schools, owing probably to the great expense, which the parents cannot bear in addition to the after special training required for the profession; 113, 114, 120, 121 and 125, *et seq.* The reasons why the upper and upper middle classes do not send their sons into the profession are difficult to define: the position of a medical man in the public service ranks too low, he cannot rise as others rise, he is put behind in every way, in the brevets he is mentioned in a separate class and after the executive officers; again, many persons are disinclined to hospital practice and to anatomy and dissection; 122. Chemistry is more needed in medical education than botany; physiology and anatomy infinitely more so, in fact, essential; botany chiefly valuable for the training it gives to the powers of observation; a medical man is not a herbalist as he used to be; all the physical sciences minister in some way to the medical profession; the best medical degrees demand an elementary knowledge of every one; the London University degrees demand all, except, perhaps, applied mechanics; 115–119. Cheap medical colleges at St. Bartholomew's and Birmingham mentioned; 124. Physicians proper are a very small body; very few men are educated as physicians proper; that is owing to the higher education of what may be called the lower parts of the profession, and because general practitioners are more in demand than physicians; a good general practitioner ought to know all the physician knows, *plus* the surgery; 125–127. The medical degrees of the London University are very highly valued, because the examinations are strict; they are a pledge of previous acquirements in various directions; they demand for matriculation a thorough education, including Latin, Greek, and mathematics.

LYELL, SIR CHARLES, F.R.S., page 370.

Took honours at Oxford, and received a Doctor's degree seven years ago; is a Fellow of the Royal Society, and the author of several works on geology and of "*Travels in North America;*" 1–6. Physical sciences in this country seem to have been ignored; there has been a move of late in the Universities to restore them somewhat to the place they formerly held when the sciences were much less advanced, but when in proportion to what was then known they held a very fair position; within the last 200 years they have been deprived of their proper position; the public schools being modelled to a great extent on the system of the Universities, in order to obtain their prizes and honours, the sciences have been neglected also in the schools, even where the boys are educated up to the age of 17 or 18; in that period progress in science has been more and more acquiring importance, theoretically and practically, but science has been more and more excluded from the teaching of the higher classes of the country; 7, 8. Although a large proportion of the boys at the larger schools do not go to the Universities, the system of teaching is planned as if they did; in fact the object of the schools is to teach just what is required at the University matriculation examination, and the boys are deprived of the advantage of the mental training of the sciences (represented even by any one of them) which the classical languages do not furnish; 8. The masters having no knowledge of the sciences and natural history are prejudiced against them and slight them; besides this they are unable to teach them; as physics and natural history have developed, the school and University system have become restricted from there being fewer people to teach them; has treated the decline of scientific teaching historically in his first "*Travels in America;*" the majority of boys at the great public schools are sacrificed to the minority who go to the Universities; 9–16. Wishes natural philosophy and chemistry introduced into the matriculation examinations at the Universities of Oxford and Cambridge, as they are at the University of London; 17–19. Would not expect the knowledge of these sciences to be more than elementary; it would be of immense importance that the subjects should be thus recognized; 20, 21. He would have the sciences introduced into the schools without in the least disparaging the present studies, and knowing the difficulty of the introduction he would be satisfied with a very moderate amount of science to begin with; 22–26, and 38–42. Mode of teaching the sciences; 11, and 27–29. Science, as a mental training, better than classics and mathematics; 29–33. Would leave to the Universities a portion of the Greek and Latin now done in

GENERAL EVIDENCE.

LYELL, Sir CHARLES, F.R.S.—*cont.*

the schools, and devote the school-time thus gained to teaching science; 30. The best mode of commencing education is probably the present, namely, with the ancient languages, but he would begin early with science; the faculties of observation ripen earlier than the power of reasoning; and the connexion of the names of animals and plants in learning Latin has a surprising effect in helping the memory; 34–37. Believes that the purely literary pursuits and the literature of the country would receive benefit by a degree of scientific education and instruction being given in the public schools and the Universities in conjunction with literary education; instances Hallam; so much of science is now scattered through the literature of Europe that the literature can not be understood without some scientific knowledge; 44. More physical science taught in Germany than in England; 49, 50. The German gymnasia the causes of this; a separate teacher of science in the little town of Eisenach; 51–58. Does not find that this superior education in science leads to a corresponding superiority in the educated classes of Germany over the educated classes of England, but this he attributes to our political freedom; among the literary men the advantage of the superiority of education is found; also among the clergy; 55–61. Opinion as to connexion between education in classics or in science with liberty or absolutism; 84–96. Before the formation of the School of Mines, in Jermyn Street, there was great difficulty in obtaining in England the assistance of men practically educated, and resort to Scotland and Germany for a geological surveyor was frequent; 62–64. The institutions in Jermyn Street and South Kensington have provided facilities for instruction in practical science, but that has hitherto told little on general education; the public schools are not places where this instruction should be given, but if the elements of science were not wholly neglected at school there would be more educated men to go into the scientific departments, and the mining superintendents would be drawn from a higher class, as is now the case in Germany, where Count Brenner in Austria and Count Beust in Prussia are devoted to mining, and consider it an honourable profession; 63–66 and 69, 70. Approves the system of "bifurcation;" 67, 68. Men are now allowed to go up at Oxford for honours in the physical sciences; if, combined with this, instruction in science were given in the schools, the men who obtain the prizes would be likely to compete for such offices as he had just named, geological surveyors and superintendents; 71–76. The sale of a scientific work is larger among the middle classes of the manufacturing districts than the clergy and country gentlemen of the agricultural districts, and on account of the present distress in Lancashire a publisher would say, "Do not bring out your book just now;" politically it is a dangerous state of things that the material world should be much better known by the middle than by the upper classes; thinks it specially desirable that the clergy should be taught science; 77–81. Asked whether if the upper classes in acquiring a greater amount of knowledge of the physical world were to lose their literary and intellectual superiority, they might not endanger their pre-eminence as much in one way as they would gain it in the other, the witness replies that at present, by narrowing the number of subjects taught, a boy is prevented from learning that for which he has an aptitude, and that after he leaves school he forgets that which has been forced upon him, the result of which is that he obtains the advantage of neither; 82, 83.

MÜLLER, MAX, Esq., M.A., page 394.

Has been Taylorian Professor of modern languages and literature at the University of Oxford about eight years; in that capacity has been examiner for the University scholarships in modern languages; has also been examiner for the Indian Civil and Military Services; 1–3. Gives lectures every term on the literature of Germany and France, and comparative grammar, or the science of language; 4–6. Ever since the throwing open of the Royal Artillery and the Indian Civil Service to public competition, there has been a growing improvement in the boys' acquirements in French and German, altogether satisfactory considering how little time is devoted to them at the public schools; is unable to state specifically the improvement in this respect in the nine schools the subject of the inquiry; believes that the boys who carry off the Oxford scholarship at the Taylor institution are almost without exception sons of foreign parents, or boys who have had other special advantages, such as living abroad, or being the sons of ambassadors; 7–19. Scarcely a boy comes to him unable to read an easy French or German writer; 20. From 3 to 50 boys attend his lectures, from 200 to 240 come before him in the examinations yearly, he also examines the cadets at the Royal Military academies at Woolwich and Sandhurst, and has there had an opportunity of knowing the acquirements of the sons of the gentlemen of England in those languages during the last eight years; 20–23. His general impression is that half the successful candidates at Woolwich come from the great public schools, including Marlborough; 24–26. The improvement in the knowledge of German and French which he mentions is in the grammatical knowledge of the languages, ability to translate an easy book into English, and in writing those languages with some degree of

MULLER, MAX, Esq., M.A.—*cont.*

fluency; 27–30. Fluency in speaking is never acquired at public schools, it is always traceable to extraneous sources; 31, 32, 151, 152. Conversational classes failures at home and and abroad; 33–37, 41, 42, and 149, *et seq.* Accent; 43–47, 78, *et seq.*, and 132–135. All that a boy taught only in school can acquire is an ability to read easy prose and verse for his amusement or instruction; 38–40, 77, and 107–110. Most of the Oxford men are able to read an easy French book; 48, 49. And try to learn German; 158. Time would be saved by teaching Latin and French together; 50, 51, 53, 95–98, and 100–106. The two languages assist each other; 95–98 and 125–127. Similar thing attempted in France; 52–55. French school books good; 84–86, 94. May be used in teaching other things than the language; 94–99. Mode in which French should be taught in the public schools; would have an English Classical Master knowing French to teach, aided by a French Assistant Master; 57–62, 132, *et seq.* The English Master would know what the boys knew in Latin, and would best maintain discipline; 58–60, 132, *et seq.* And leave pronunciation and idoms to the French Assistant Master; 61, 62. What applies to French in the main applies also to German; 63, *et seq.* No difficulty in finding proper French and German Assistant Masters; 66–68, and 128–131. Time for foreign languages, considering the other important matters of education, could scarcely be more than two hours; 69–76. French ought to be commenced early, before the boys come to school, if not in the nursery; 79–84, and 99. No difficulty in keeping it up at school; 91–93. There might be private lessons; 145 and 150, *et seq.* Thinks the English are equal to the Germans in the capacity of acquiring modern languages; 111–114. There are more Germans speaking tolerable English than English speaking tolerable German, but that applies not to school boys but to grown up people; it is more for the interest of Germans to learn English than for English to learn German; 115, 116. French more known in Germany than in England; 117, *et seq.* The French and German classes at Oxford are increasing; 153, *et seq.* Good scholars prefer German because it opens to them a vast literature; 154. Many undergraduates learn German who afterwards become clergymen; 157. Learning German is to some extent connected with the study of theology; has been told by German booksellers that many of the German theological books sell better in England than in Germany; few of the men on either side who take an interest in theological matters are unable to read German; Dr. Pusey and Professor Jowett are excellent German scholars; 161–164. The study of Italian is increasing at Oxford; 153 and 165. There are teachers of German, French, Italian, and Spanish; 153. Assuming that the scientific study of language is of great importance in early education, agrees that language is best studied in Greek and Latin; being dead languages they are complete and definite; 89, 90. Would not say that the study of classical philology is diminishing in importance, but classical scholarship does not hold the place it ought to do and used to do; the "double-school" system at Oxford has injuriously affected the study of Greek and Latin, and he hopes it will soon be repealed, at least in the case of classmen; Frederick the Great, one of the greatest admirers of French, once said, "Whatever you do, do not let a boy grow up without "knowing Latin"; 166, 167. Goethe, spite of his partiality for physical science, would have begrudged every hour taken from Greek and Latin in the education of boys at school; 168.

OWEN, RICHARD, Esq., F.R.S., page 387.

Is a Fellow of the Royal Society, Superintendent of the zoological, geological, and mineralogical departments of the British Museum, and author of works on comparative anatomy, paleontology, and kindred subjects; 1–4. Has long felt a great desire to see the great public schools, to which the sons of the territorial and wealthy families of England are sent, possess the means of learning the elements and methods of natural history, either in botany or zoology, or both, which they do not at present possess; 5, 6. The upper classes appear to be the least acquainted with these subjects, especially with their use in disciplining the mind; alludes particularly to the absence of instruction in these matters at the public schools; 7, 8. Grammar and classics, arithmetic and geometry, may be most important disciplinary studies, but they fail to bring out faculties of order and method, which natural history science most tends to improve, namely accurate observation and classification of facts; the present system of education, besides exercising the memory and imagination, sharpens the memory and imagination, sharpens the mental powers for rigid deduction of consequences, as by geometry and mathematics, and for close conformity of word with idea and the whole faculty of word-fighting, as by logic, and he would not claim for natural history more than its due as an elementary training science, benefiting and improving the mind for accurate observation and bringing out the faculties of classification, order, and method; of the latter he gives some instances by sketching an outline of natural history classification; 9–11 and 49–54. Having studied the difficulties attendant on the introduction of what is needed by way of reform, thinks that the chief improvement might be made if every boy of the proper age were compelled to listen to a

OWEN, RICHARD, Esq., F.R.S.—*cont.*

course of lectures, one hour a week for six months, on natural history, embracing zoology, botany, and mineralogy, branching off in the two former into anatomy, omitting geology as too complex, and specially regarding botany; without foreseeing the ultimate demand he would be contented with this as an experimental beginning; 12–15, and 42, *et seq.* Additional time, perhaps half an hour a week, out of school might necessarily be spent in reading a class book on the subject; 68–74. Mode of arranging the lectures in a large school; 50 in a class; lectures on natural science before the Royal children; 42–46. Would not have the same teacher undertake more than one branch of natural science, but different branches of natural history, such as zoology and botany, might be taken by one; 57, 58. Subject of teachers pursued; 59, *et seq.* He would test the effect of the lectures on the boys, and make the attendance on these lectures a part of the curriculum of the school, as if left voluntary or as an extra the lectures might be no improvement; 16–19. The attendance of a well qualified teacher, during such period as might be most convenient, would probably be sufficient without a resident professor of natural history; 20, 21, 59 *et seq.*, and 114, 115. Conceives this would be an advantageous mental training of which the schools are at present deficient; 22–24. Knows little of proprietary or other large private schools; believes, however, that some progress with natural history has been made in them, but at King's College University College, a considerable amount of elementary knowledge in physical science is required before matriculation, which implies that it has been taught in the schools supplying the students; 25–28. Having communicated with the masters of the different public schools on the subjects, has found no indisposition to recognize the importance of natural history and physical science, but a want of appreciation of its value as a training instrument, and the difficulty appears to be how to find time to fit it to the system now in operation; the proposed addition to it; 29–33. Thinks, however, that need not be a ground of objection; 34. The "proper age" might be 15 or 16; would not apply the proposed teaching to boys much under that age; reminded that other witnesses have proposed a lower age, says he has had no experience in teaching except of adults; 35–37. Thinks 15 would be a good age to begin, but apprehends no danger from beginning earlier; 40–47. Regards chemistry with less favour than natural history as a mental training; would place modern language in the first order of importance, natural

OWEN, RICHARD, Esq., F.R.S.—*cont.*

history next, chemistry last; astronomy and mechanics are already in part provided for in the illustrations of geometrical and algebraical teaching; 38, 39. Chemistry; 38, 48–54, and 80–83. Knows nothing of the system of bifurcation, but it seems a good one; 55, 56. Sir Joseph Banks as an illustration; 51. Has observed at school and in after life three distinct types of mind, some with a predominant turn for languages, others for mathematics, and others for natural sciences; taking a school like Eton, with 800 boys, there must be many boys with a turn for science, and it is not only a great hardship but an injury to make them remain there till 18 years of age without receiving any instruction on the subjects for which they have an aptitude; has heard complaints by Eton men, who have afterwards under disadvantage and difficulty followed their bias in favour of science, that they had no opportunity at school of learning the elements of natural history; 85–87. At first there might be difficulty in getting teachers in natural history for the principal public schools; at present, owing to the want of teachers, naturalists are all naturalists by accident; the subject pursued; 59, *et seq.* Approves of beginning with the sciences of observation and ending with those of experiment; a boy might be taught botany at 12 or 13, and this would sharpen his faculties and prepare him to study zoology; boys in the German gymnasia begin at from 10 to 13; 75–79. Sciences are progressive, but their principles are as fixed as those of mathematics; illustrations embracing Linnæus, Ray, Aristotle, and Cuvier; not to teach till the sciences could undergo no change in form would be to wait till the termination of our existence as a species; for the purposes of elementary instruction and mental discipline, the natural sciences are as good as they will perhaps be 10,000 years hence; 88–98. There are other advantages to be derived from the study of natural history besides its effect as an instrument of mental training; it largely illustrates the teleological principle, or the adaptation of means to ends, the appreciation of causes and effects; 99–103. Ignorance of the physiological structure of the human frame is the basis of the success of the empiric; 104. The practical teachings of physiology concur with the teaching of morality as to the effect of temperance and chastity; 105–111. Opinions of Mr. J. B. Jukes, (Local director of the Geological Survey of Ireland) and Baron Cuvier in favour of the study of the natural sciences as an instrument of mental culture; 116.

INDEX TO THE EVIDENCE.

Except where they indicate the page, the Figures refer to the numbering of the Questions in the Evidence relating to each School, and, in regard to the General Evidence, to the numbering of the Questions put to each Witness.

A.

Absences:
At Eton, 1864–1870.
Absolutism or liberty as affected by education, Gen. Ev., Lyell, 84–96..
Accounts:
At Charterhouse. (*See* Property.)
St. Paul's:
Various items in these connected with the school explained, 1–99.
Acland, Henry W., Esq., M.D., Regius Professor of Medicine at Oxford:
His evidence, Gen. Ev., IV., p. 405.
Acquirements on entering:
At Eton, 6042, 6099–6108.
Act for regulating the distribution of ecclesiastical patronage, West., 2029–2034.
Admission to Westminster by competition, 2056–2080.
Age of boys:
At Eton, 1313 et seq., 3818–3831, 3864 et seq., 5869 et seq.
At Winchester, 70 et seq., 532–541, 834 et seq.
At Westminster, 2352–2365.
At Charterhouse, 967 et seq., 1381.
At St. Paul's, 442 et seq.; admitted at too early an age, 620–626.
At Merchant Taylors', 657–674.
At Rugby, 1229 et seq., 543, 2218–2227, 556–568.
At Shrewsbury, discretionary, 437–446.
Age for commencing the study of natural science, Gen. Ev., Acland, 32; Carpenter, 25–32, 63 et seq., 75 et seq., 54–57, 69 et seq.; Faraday, 40 et seq., 45 et seq., 48 et seq., 68 et seq.; Hooker, 4–32, 67–69; Owen, 35–37, 40–47, 75–79.
Age of boys at King's College, Gen. Ev., Browne, 57–59.
Ainger, Arthur Campbell, Esq.:
His evidence, E., III., p. 279.
Airy, George Biddell, Esq., F.R.S., Astronomer Royal:
His evidence, Gen. Ev., IV., p. 401.
Albert Prize, the:
At Eton, 6072–6074, 2438–2488.
Almanack:
At Eton, 3601–3605, 5096–5101.
Alumni Westmonasterienses, 74–78.
Anatomy and physiology essential to the medical man, Gen. Ev., Hooker, 115–119.
Angoville, Mr. O. C., French Master at Winchester:
His evidence, Win., III., p. 362.
Anstey, Rev. Charles Alleyne, M.A.:
His evidence, R., IV., p. 273.
Appeal against punishment by monitors. (*See* Punishments, and Monitors.)
At Eton, 2968 et seq., 4595 et seq., 7120 et seq., 5838, 4603.
At Winchester, 210–222.
At Westminster, very rarely resorted to, 2096 et seq., 2811–2817, 3256–3274.
At Harrow, 921–951, 1517 et seq., 1583–1589, 1604–1607, 1612–1634, 1906–1928.
At Rugby, 342 et seq., 958.
Apposition, the:
At St. Paul's, 240–250, 813 et seq., 816 et seq.
Apprentices:
From Charterhouse, 1380–1388, 1476–1480.
Aptitude for special divisions of learning, Gen. Ev., Carpenter, 58–62; Hooker, 88–91; Lyell, 62 et seq., 85 et seq. (*See also* Bifurcation, Deviation, and Non-Collegiate Class.)
Arithmetic:
At Eton, 5964–5971, 6272–6277; one-fifth the time of classics, 6175.
At Westminster, 1695 et seq.
At Charterhouse, 1182–1189
At Merchant Taylors', 424.
At Rugby, 1333 et seq., 2280–2284.
Army class and examinations:
At Eton, army class, 5041–5047, 4513–4524; army examinations, 2790–2801.
At Westminster, boys of good ability may pass civil service and army examinations without cramming, 414–420, 1122–1138, 173–184.
At Harrow, 1384 et seq.
At Shrewsbury, an able and attentive boy would be able, with his classics and mathematics, to pass the military and civil service examinations, 557–559.
Arnold, the late Dr., of Rugby, E., 3124–3148, R., 1111–1120, 1214–1216.
Arnold, Rev. C. T., Assistant Master at Rugby:
His evidence, R., IV., p. 275.
Audit:
At Eton, 12–17, 108 et seq.

B.

Baker, W., Esq., Probationary Fellow of St. John's College, Oxford:
His evidence, M. T., IV.. p. 140.
Balston, Rev. E., M.A., Head Master of Eton:
His evidence, E., III., p. 96.
Barnard, Rev. M., M.A.:
(*See* evidence of Rev. C. Lane, St. P., IV., p. 71.)
Batcheldor, T., Esq., Registrar of Eton:
His evidence. (*See* Goodford), E., III. p. 1.
Letters from him, E., III., p. 63.
Bather, John, Esq., Governor and Trustee of Shrewsbury School:
His evidence, Sh., II., p. 339.
Bathing:
At Winchester, 1847.
At Rugby. (*See* Washing.)
At Harrow, no bath room, provision for washing described, 982–985.
Beavor, at Charterhouse, explained, Ch., 1342 et seq.
Bedminster Trust at Winchester amounting to 468*l.* a year given in exhibitions for boys who do not succeed in getting to New College, 36–56, 86–125, 526.
Bed-rooms. (*See* Dormitories.)
Bell's, Dr., monitorial system, and its result, Ch., 545–560.
Benefices:
At Eton, 721–748, 3184–3187, 4838–4865, 5602–5907.
At Winchester, in the absolute discretion of the Warden and Fellows, 21–28.
At Westminster, the Chapter acknowledges no obligation to bestow them on the Masters of the School, 332–337.
Belonging to Charterhouse, restricted to Masters who have done actual service in the School, 191–193, 1292–1305, 1460–1461, 676 et seq.
Bentley, Mr. T. A., Assistant Master at Shrewsbury:
His evidence, Sh., IV., p. 349.
Bifurcation, system of:
At Eton, 3765 et seq., 6803–6842, 6858–6871, 4545.
At Winchester, 672–688, 831 et seq.
At Westminster, 1139, 1122–1338, 173–184. (*See* Deviation.)
At Charterhouse. (*See* Deviation.)
At Harrow, 552–574, 1404–1408, 1116 and note.
Described by the Rev. C. Evans, of Rugby; would have all the boys educated in classics, French, and mathematics, up to the Fifth Form; would have two Sixth Forms, one for the prosecution of classics, while in the other Greek and versification should give way to extra mathematics, modern languages, history, and physical science, 1229–1272, 2260–2276; analogy of this with the Cambridge system, 1302–1305; opinion that it might be done easily in new schools, and without much difficulty in old ones, 1229–1263, 1283–1301, 1305–1309, 1350–1356; in the Second Sixth the boys fall off in scholar

Bifurcation, system of—*continued.*
ship, 855–858; opinion unfavourable to the further extension of bifurcation at Rugby, by Dr. Temple, 1063, 1068.
Gen. Ev., Lyell, 67 et seq.; Owen, 55 et seq.
(*See* Aptitude, Deviation, and Non-Collegiate Class.)
Blakesley, Rev. J. W., B.D.:
(*See* evidence of Rev. C. Lane, St. P., IV., p. 71.)
Gives evidence alone, St. P. IV., p. 101.
Bloxam, Councillor:
His evidence. (*See* Mayor and Corporation of Shrewsbury.)
Boating: (*See* Rowing.)
At Eton, 8725 et seq., 7870 et seq., 1291 et seq., 5307–5354, 5402–5411; boat fête, 3605–3612, 7870 et seq.; expenses, 7878 et seq., 1280 et seq., 5318 et seq.; captain of the boats a greater man than the head of the eleven, 2884–2887, 5334; boating and matches, 1280–1302.
At Winchester, 808–816.
At Westminster, 1306–1311, 374–387.
Most intelligent boys best rowers, 436.
At St. Paul's, no longer exists, owing to the crowded traffic on the river, 1037 et seq.
At Merchant Taylors', discontinued owing to the crowded state of the Thames, 645.
Boarding System, the:
At Eton:
Boarding houses, 3372–3382, 7938–7957, 2489–2518, 8379–8382, 8454–8460, 9016–9049.
Boarding-house keepers, their moral influence and discipline, expense, &c., 7958–8023, 4872–4970.
At Winchester:
Boarding house, 258 et seq., 475–480.
Boarders, 276–285.
At Westminster:
Boarding houses, 168–172, 1682–1686, 784–789, 873–878, 2284–2304, 321–325; new ones might be procured, 939–942, 873–878.
At Charterhouse:
Boarding houses, 439–444, 564–568.
At St. Paul's:
1032 et seq., 1037 et seq., 481–525, 615–619, 109–131; formerly there were 60 or 70 boarders, country boys, there are none now on the premises, but a dozen or so live with a clergyman in Charterhouse Square, 457; boarders had an advantage over day boys, 615–619.
At Merchant Taylors':
Boarding houses, system minutely described, 700–712, 733–784, 977–999; not under control of school or monitors, 700–722, 977 et seq.; charges not fixed, but arranged with the parents, 771–784, 387–401; food satisfactory, 780–783, 999.
At Harrow:
Boarding houses, 225–229, 284–287, 461–466, 530–549.
Small houses at Harrow, their advantages and disadvantages, 230–269, 461–466, 1651–1667, 1180–1237.
At Rugby:
Boarding house system, 2025–2038, 152 et seq., 283–286, 313–321, 326–338.
At Shrewsbury:
Boarders with tradesmen uncontrolled by the school, 1043–1056, 302 et seq.; private boarding houses in the town, 318–324.
Books:
At Eton, read by the boys, 7836 et seq., 4400–4419, 7342–7420; books, how introduced, 3036 et seq., 6166 et seq., 5031–5040.
Boringdon, Viscount:
His evidence, E., III., 251.
Botany, taught successfully in a national school by Professor Henslow, Gen. Ev., Hooker, 4–32, 67–69, 98 et seq.
Bounds:
At Rugby, 964–968.
At Shrewsbury, 600, 610 et seq.; hounds, "hounds" dinner, and leaving breakfast, 612–621.
Boxing:
At Eton, 7203–7212.
Boy tutors at Winchester. (*See* Prefect.)
Brayne, Councillor:
His evidence. (*See* Mayor and Corporation of Shrewsbury.)
Brodie, Robert, Esq.:
His evidence, Ch., IV., p. 53.
Browne, Rev. R. W., Archdeacon of Bath:
His evidence, Gen. Ev., IV., p. 412.
Browning, Oscar, Esq.:
His evidence, E., III., 176.
Buckoll, Rev. Henry James, M.A.:
His evidence, R., IV., p. 273.
Bucks:
Preference at Eton in favour of Bucks and Cambridgeshire, 2184–2187.
Buildings, New:
At Eton, 660–671.
Bullying:
At Eton, little practised, 8748 et seq., 7538 et seq., 9338 et seq., 4605 et seq., 4643–4702, 9554 et seq., 8436–8440, 7184–7202, 5838–5845.
Bullying—*continued.*
At Westminster, 2823–2827, 3116–3127, 977 et seq., 1221–1229, 2139–2159; fagging a great safeguard against bullying, 3615–3623, 465–471.
At Charterhouse, abuse of fagging would be bullying, 1596–1661, 929–937, 1073 et seq., 2110–2117, 2029–2638.
At Harrow, 715–722, 742 et seq., 907–920, 1517–1537, 1568 et seq., 1612–1634.
At Rugby, little of it, 2008, 2009, 1000–1002, 1521–1526; no bedroom bullying, 1719–1725.
A grave offence, very little of it, Sh., 598 et seq.
Burgesses' sons right to free education in Shrewsbury School, 66 et seq., 153–156, 819–831, 363–367.
Number diminishing by the operation of Municipal Reform Act, 66–77; suggestion that needy boys be added to the list to prevent its vanishing, 707–710.
Burton, Robert, Esq., Governor and Trustee of Shrewsbury School:
His evidence, Sh., IV., p. 339.
Burton, Rev. R. L., Governor and Trustee of Shrewsbury School:
His evidence, Sh., IV., p. 339.
Butler, Rev. Henry Montagu, M.A., Head Master of Harrow:
His evidence, H., IV, pp. 153 & 172.

C.

Calendar, alteration in:
At Eton, 4035–4038.
Calvert, Mr. Edward, Assistant Master at Shrewsbury:
His evidence, Sh., IV., p. 346.
Cambridge:
Preference at Eton to boys from Bucks and Cambridgeshire, 2184–2187.
Camden, The Great, a distinguished scholar at St. Paul's, 641 et seq.
Canterbury, Archbishop of:
Visitor of Eton, E., 1146 et seq.
His influence at the elections of Governors of Charterhouse, Ch. 1363.
Capitation fee at Rugby. (*See* Emoluments.)
Careswell exhibition at Shrewsbury. (*See* Exhibition.)
Carey's, Bishop, benefaction at Westminster, 1083–1086.
Carpenter, W. B., Esq., M.D., F.R.S., Registrar of the London University:
His evidence, Gen. Ev., IV., p. 363.
Carter, Rev. W. A., M.A., Lower Master of Eton:
His evidence, E., III., p. 206.
Cemetery at Eton. (*See* Eton, Property.)
Challenges at Westminster, explained, West., 104–126, 133–142, 980 et seq., 647–711.
Chancery scheme:
Shrewsbury, 78–98, 790–807.
Chaplain:
At Rugby, is Head Master, 178–186; his salary, how disposed of, 178–186.
At St. Paul's, traditional, mentioned by Dean Colet and Erasmus, 395–398.
Chapman, Bishop:
His sermons, E., 9503 et seq.
Chapman, W., Esq.:
His evidence, M. T., IV., p. 117.
Charities:
Subscription to, at Eton, 580.
Charterhouse School:
Boys clothed in modern style, 1699–1705; men distinguished at Oxford as much as those from other public schools, 1689–1691; school in a satisfactory condition, 1694 et seq.; fluctuation of, 28 et seq., 54 et seq., 65, 80, 115 et seq., 119–132, 159 et seq.; owing to the introduction of Dr. Bell's monitorial system, 543 et seq.; boys are sons of professional men, and occasionally of tradesmen, 30 et seq., 362 et seq.; the present site favourable for a day school, 77 et seq.; schoolmaster has superintendence of the whole school, but could not expel a foundationer without the consent of the Governors, 138–158, 195, 226–228, 161–163, 447–459, 1435–1452; foundationers educated, boarded, and clothed gratuitously, only charges for books, washing, and extras, 229–257; day boys among the great successes, 352, 364 et seq., 953 et seq.
Chemical class at Wellington going on well, Gen. Ev., Acland, 8.
Chemistry. (*See* Natural Science.)
Chemistry more needed in medicine than botany, Gen. Ev., Hooker, 115–119.
Choristers:
Special teaching of, at Eton, 586–630, 1071 et seq., 1479–1497.
At Winchester, 177–181, 690 et seq.
At Westminster, Dean and Chapter responsible for their education, 1390 et seq.; boys, by the statutes, to be taught grammar as well as music, to go to college, and, with sons of tenants, to be preferred as King's and Queen's scholars, and going to the Universities, 1393–1410 et seq., 1280 et seq.; Canon Lupton so educated, also three of the sons of Mr. Turle, the present organist, and a few others, 1412 et seq., 1507–1554; Dean Buckland substituted for this

Choristers—*continued.*
an inferior school, somewhat on the national school system, but with Latin, and to it the choristers are now sent, 1414 et seq., 2012–2028; no provision in the shape of superannuation or apprenticeship for the boys when their voices break, 1447 et seq.
Christopher, the:
At Eton, 3069–3073, 6030–6041.
Classics, the, as the basis of education:
At Eton, 5462–5468; not so well taught at Eton as formerly, 3718, 3719, 3812–3822; value of, relative to modern languages, 2584 et seq., 2662 et seq.; opinion that Eton should remain a classical school, modern languages not being a part of the curriculum, 9359–9366, 9448–9455; deficiency of Etonians on arriving at the universities, 2998 et seq.
At Winchester, 1353–1362, 974 et seq., 547 et seq., 822–830, 1522–1529.
At Westminster, preponderance of classical teaching, 1756 et seq., 1012–1019, 1319–1324, 1336–1365, 360–365; formerly exclusive teaching, 885–889; books read, 885 et seq., 980; result not very brilliant, 1319–1324.
At Charterhouse, 460–469, 445 et seq.
At St. Paul's, classics alone affect a boy's promotion, 324–334; details as to books and studies, 627–639, 770–807.
At Merchant Taylors', Greek plays, &c., 841–844, 852–872, 887–893, 272–274, 1048–1050; opinion that too much time is abstracted from classics, 315–320.
At Rugby, proportion of boys imperfectly educated in classics, 1229 et seq.; others well forward, 2159–2203; great preference to, over mathematics, 2259–2306, 676–709; in second sixth boys fall off in scholarship, 855–858. Read by Rugby boys going to Trinity or Balliol, 1756–1785; opinion that there is too much original composition, and too little of translation, 1786–1806.
At Shrewsbury, 557–559, and in great detail throughout the Shrewsbury evidence.
General evidence,—opinion that, without disturbing classical learning as the basis of English education at the public schools, there is no difficulty in superadding mathematics and science, Gen. Ev., Airy, 101–105; classics, as well as mathematics, highly prized by the medical profession, Hooker, 60–66, 105–112; time devoted to classics at an early age may be advantageously diminished, Carpenter, 33–41, 67 et seq., 71–74, 88 et seq., 112 et seq.
(*See* also Modern Languages, Mathematics, and each of the nine schools in the Index.)
Clothing (Liberatura et Vestitus):
At Eton, 299–317, 1477 et seq.
Coleridge, Rev. Edward, M.A., Fellow of Eton College:
His evidence, E., III., p. 117.
Coleridge, Sir John Taylor:
His evidence, E., III., p. 187.
Colet, Dean:
Founder of St. Paul's, 977 et seq.; his singular dislike for the clergy, 1019; reason for the number 153 in the foundation, the miraculous draught of fishes, 961 et seq.
Collegers:
At Eton, studious habits of, 8806 et seq.; opinion of Rev. Mr. Coleridge that they ought not to pay for their maintenance, 3758. (*See* Oppidans and Collegers.)
Comfort of boys:
At Eton, 5918–5926, 3865 et seq.
Communion, Holy, voluntary, but well attended:
At Eton, 7613–7621.
At Winchester, 1181–1192, 696–708.
At Westminster, 1164–1181, 2263–2286, 421–435.
At Charterhouse, 1624 et seq., 888–894.
At Merchant Taylors', 833–839, 571–576.
At Harrow, 647 et seq., 1726–1730.
At Rugby, 2056, 885–891, 1694–1702.
At Shrewsbury, 688 et seq.
Competition, open, for Eton foundations. (*See* Entrance Examinations):
Has raised the intellectual status of the school, 1280 et seq., 1312–1329, 2145, 9413 et seq.
Composition:
At Eton, 5418–5420.
At St. Paul's, 646–662, 668.
At Harrow, 1094–1112.
At Rugby, 2324–2326, 2380–2385.
"Conduct," a, at Eton, described, 5623–5640, 5648–5673, 5850–5860, 1049–1070, 1634 et seq.
Conferences between authorities, Masters, and Assistant Masters:
At Eton, 3010–3036, 3122–3128, 3386–3405, 6155 et seq., 6173, 3782–3792, 4441–4444, 8193 et seq.
At Winchester, 543 et seq.
At Westminster, 1009–1011.
At Charterhouse, 454–459.
At St. Paul's, 321 et seq.
At Merchant Taylors', 443–447.
At Harrow, 30–42, 325–333.
At Rugby, 574 et seq., 1105–1123.
At Shrewsbury, 263 et seq., 270 et seq.
Confirmation:
At Eton, 7613–7621, 6203 et seq.
At Winchester, 1181–1194, 698–708.
Confirmation—*continued.*
At Westminster, 1164–1181, 2263–2286.
At Charterhouse, 1624–1634, 879–887.
At Merchant Taylors', 823–839, 571–576.
At Harrow, 615–634, 1723–1725; Dissenters' children often confirmed, 615, 634; chiefly Unitarians, 632–634.
At Rugby, 2054–2056, 883, 892–895, 1684–1693.
Congé d'élire, for election of Provost of Eton, 5526–5530.
Constitution at Eton, old and new, described, 768 et seq.
Cricket:
At Eton, 8854 et seq., 2990, 4813–4815, 8580–8593, 7421–7428, 7430–7437, 8181–8193, 5399–5414; scarcely compulsory, 5362 et seq.
At Winchester, 1311–1325; fagging at, 1134–1146.
At Westminster, 1312–1315; most intelligent boys best at cricket; 436; fagging at, 2959, 465–471.
At Charterhouse, 1686 et seq., 1196 et seq.; fagging, 1794–1809.
At St. Paul's, used to be played on spots now built on, 1038–1039; at present played at Kennington Oval on the Wednesday and Saturday half holidays, 553–558.
At Merchant Taylors', 725–729, 640–644.
At Harrow, 605–610, 751–763, 2007–2019, 2052–2057, 1868 et seq.
At Rugby, 2039 et seq., 1630–1691; it frequently occurs that intellectual power and athletic superiority go together, 1027, 1954–1957.
At Shrewsbury, 1005–1011, 1226 et seq., 1264–1269, 665 et seq.
Cycle, teaching in:
At Rugby, 609–619, 624–627, 638 et seq.

D.

Dames' Houses:
At Eton, 7938–8679, 2489–2518, 2555–2563, 6754–6757, 682–700. (*See* also Houses, Eton.)
Day boys:
At Charterhouse, day boys have been amongst the great successes, 352, 953 et seq.
Day School:
At Westminster, approved by Dr. Phillimore, involving home at night, and on Saturday and Sunday, 969–977.
Dean and Chapter of Westminster, position of, in relation to the Ecclesiastical Commissioners, described, 1834–1845, 1781–1797, income of Dean and Chapter has greatly increased in recent times, 1928–1931, 341–359; to what extent the scholars and the school have participated, 1932–1960, 1970–1980, 341–359; it might be better that the school should have a defined portion of the revenues, 1961–1969; no change can be made without the consent of the Ecclesiastical Commissioners, 1981–1996.
Debating Societies:
At Eton, 7846 et seq., 8555–8566, 5697 et seq., 9437–9440, 5297 et seq.
At Winchester, 1306–1310.
At Westminster, 2436–2441.
At St. Paul's, 661–667.
At Harrow, 605–610, 2030–2041, 1836–1845; monitors ex officio members, 1836–1845.
At Rugby, three started, and all died, 2335–2346, 1928–1948.
Debts incurred by the boys at Westminster, 869–871.
Department of Science and Art, Gen. Ev., Carpenter, 106.
Deviation from curriculum, where boys show special aptitude for particular studies:
(*See also* Bifurcation, Non-Collegiate Class, and Aptitude.)
At Eton, 9442 et seq., 9456–9466, 3743 et seq.
At Winchester, 659–671.
At Westminster, 173–184, 224–230, 1122–1138, 437–439.
At Charterhouse, 823–850, 1489–1497, 1152–1157.
At Harrow, 550–567, 834–842, 1304–1308, 1382–1388, 1404–1408, 1116 and note; difficulty attending it, 550–559.
Gen. Ev., Carpenter, 58–62; Faraday, 32–39; Owen, 51–57, 85–87.
Diet:
At Eton, 8740 et seq., 275–298; tables at pp. 64, 65; 367 et seq., 1362–1384, 2525–2534, 6880–6884, 4754–4770, 4349–4355, 8429–8435, 7259–7283, 5763–5805, 5829–5837, 7570–7579, 6077–6092; beer, 8429–8435, 5771–5805. Pastry, 2546.
Improved by the Godolphin Fund, 192–267.
At Winchester, good, 1159–1166, 991–994, 469–474, 1419–1429; beer, 453–456; the pastry shop, 469–474.
At Westminster, good, 1612–1629, 1641–1648, 1652–1669, 982 et seq., 839–857, 2216–2223, 1923–1927, 472–488; but meat left at dinner does not afford a meat supper to all the boys, 1612–1629, 1652–1669, 839–857; beer, good, 1649–1651, 472–488; in Dr. Goodenough's time a boy eat himself to death, 857; diet in boarding houses good, 2224–2228.
At Charterhouse, ample and good, 1609–1615, 194–214, 436–

Diet—*continued.*
438, 1042–1052, 1086–1094, 1105–1135, 2135–2144; pastry cook, 436–438; beer, 1136 et seq.
At Merchant Taylors'. (*See* Boarding Houses.)
At Harrow, good and sufficient, 276–283, 288–291, 989; complaints have been attended to, 963–968, 1697–1701; beer, Romford and Bass's, 962–976, 1702–1706.
At Rugby, rarely complained of; the Master occasionally dines with the boys in hall, 1145–1149, 416–421, 1642, 1643, 1527; resort to pastry shops neither customary nor recognized, 416–421.
At Shrewsbury, sufficient, but sometimes complained of; recent improvements in, 1077–1082, 305–511.
Dinners:
At Charterhouse, 10–20, 61–64, 69–74.
At St. Paul's, 479–525, 190–201, 688–697.
At Merchant Taylors', 748–753, 780–783, 409–411, 414, 982 et seq.
Discipline:
At Eton, 2840–2847.
Dispensing power. (*See* Statutes and Oaths.)
Dissenters' children confirmed at Harrow, 632–634.
At Merchant Taylors', dissenters admitted, 35–39.
Distributiones:
At Eton, 441–449.
Divinity:
At Charterhouse, 460–469.
At Harrow, 662–666.
At Rugby, 609–619, 624–627, 638 et seq.
Donations to boys who go from Charterhouse to Woolwich, 283 et seq.
Dormitories:
At Eton, 6217, 365 et seq., 2519 et seq.
At Winchester, 1147–1151, 970–973, 1409–1412.
At Westminster, 1670–1672, 809–812, 817–830, 3610–3614, 2199 et seq.
At Charterhouse, 392–402, 418–431, 410, 1018–1032, 1057, 1063–1081, 1095–1104, 687–698. Boys locked in at night, 1018–1032, 1057, 1063–1081, 1095–1104.
At Harrow, 249–262, 747–749, 986 et seq., 1338–1340, 1676–1699.
At Merchant Taylors', 748 et seq., 754 et seq., 977 et seq.
At Rugby, 428–443, 1703–1725, 1605–1611.
At Rugby, rooms rarely contain less than 3 boys, 411–415; preference given to large rooms, 428–443.
Drawing, as part of education:
At Eton, 5418–5420, 5472–5479, 8080–8093, 2810–2812, 2825–2828, 4555–4561, 9516 et seq.
At Charterhouse, 859 et seq.
At Harrow, 611–614, 1015–1090; drawing (perspective and landscape sketching from nature) an accomplishment, 1077 et seq.; impositions for non-attendance, 1019–1035; prizes, 1082 et seq.; no difficulty in keeping order, 1045–1047.
At Merchant Taylors', taught, but little valued, 897–905; boys with a certain proficiency in mathematics must learn drawing, 71 et seq., 1105–1116.
Drawing Master:
At Rugby, 121–124, 160 et seq., 402–407, 866 et seq.
Dress:
At Eton, 3613–3618.
At Charterhouse, 234 et seq., 2181–2185.
At Harrow, 778–782, 993–1003.
At Rugby, no distinguishing dress, 347 et seq.
Drill:
At Eton, 3619–3924.
At Rugby, 405–407.
Drinking:
At Eton, 8383–8434, 8223–8247, 5387–5391; Sunday, 3171–3177, 5243–5266, 5065–5079; at football, 5267–5269; drunkenness rare, 5065–5084.
At Winchester, 1108–1123.
At Charterhouse, 1547–1550.
At Harrow, very little, 1921–1929.
At Rugby there was some drinking, but the habit is now opposed by public opinion, 2003–2007, 1573–1579; after games, 1580–1589.
At Shrewsbury, little of it, 1023–1027, 1038–1040.
At Merchant Taylors', 1043–1047.
Duncan Prize at Winchester, Win., 57.

Ecclesiastical Commissioners:
(*See* Dean and Chapter of Westminster.)
Education as apart from instruction:
Described by Sir John Taylor Coleridge, E., 5418 et seq.
Edwardes, J. H. Hope, Esq., Governor and Trustee of Shrewsbury School:
His evidence, Sh., IV., p. 339.
Edwards, Councillor:
His evidence. (*See* Corporation of Shrewsbury.)
Election to King's and Eton, described, 8881–8970.
Elections at Westminster, West., 980 et seq., 879–883.
Elwyn, Rev. Richard, M.A., Schoolmaster of Charterhouse:
His evidence, Ch., IV., p. 3, 8, 29.
Emoluments, fees, and stipends of Fellows, Masters, &c.:
At Eton, 3208, 3209, 3215–3249, 3493–3507, 5927–5938; tables at pp. 64, 65; 388–449, 1031–1045, 1577, 1528–1557, 1578–1580, 1589–1618, 1672–1683, 1698–1701, 2283–2343, 6739–6747, 4872 et seq., 6255–6257, 1893–1901, 5641–5643, 5678–5703.
At Winchester, 152–154, 272–285, 289–327.
At Westminster, 74–84, 341, 351, 489–612, 619–625, 739–742, 626–635, 757 et seq., 858 et seq.; now under Ecclesiastical Commissioners, 87, 91.
At Charterhouse, 1–9, 21–23, 25–114, 965 et seq., 1143 et seq., 655–665.
At St. Paul's, 100–131.
At Harrow, 64–104, 284–287, 988, 1204–1220.
At Merchant Taylors', 247–271, 361–364.
At Rugby, 41–60, 152 et seq., 311–321, 465–477, 481–483; capitation fee, 451–465.
At Shrewsbury, 157–171, 198–200, 286, 287, 195–197; sufficient to secure good masters, 172–185; would, however, like to offer more, 172 et seq.
English composition attended to at Shrewsbury, 461–474.
English Form:
At Harrow, established by Dr. Vaughan for sons of tradesmen, 43, 178–183, 200–214, 1238–1256; the boys qualified for the foundation, 1238–1256.
English literature:
At Eton, much neglected, 3748–3756.
At Merchant Taylors', encouraged, 500 et seq., 668–680.
At Shrewsbury, 470.
Endowments. (*See* Benefices and Fellowships.)
Enlargement of schools:—
At Eton, 7932 et seq.
At Rugby, suggested by the fact of the applications being three times as numerous as the admissions, 391 et seq., 1031–1036.
At Shrewsbury, 832–843.
Eton College:
Preparation for, 3845–3852; opinions as to whether progressive or otherwise, 3269 et seq., 5421–5499, 3853 et seq.
Provost of, should be in orders, 5526–5530, 5620–5622, 843–871; his influence beneficial, 3653–3658; Head Master obstructed by him, 8210–8216, 3090 et seq., 9530–9538; election of Provost by fellows, 783–785; election of Provost by congé d'élire, 5526–5530; interference of the Crown a usurpation, 786–823 et seq.; election of Vice-Provost, bursar, scholars, &c., 931–940; duties, powers, and restrictions of the Provost, 3659–3671; relations with Head Master healthy, 3782–3787, 3793–3797. The Provost in important matters would consult the Fellows, 3659–3667; Eton system consists of deputing authority from Provost to Master, Master to Master, and Master to boy, 3788–3800. Opinions that the boys are well trained and accomplished, 5536–5540, 8594–8596; that the education is satisfactory, though capable of improvement, 5106–5116; but that grammar and composition are not sufficiently attended to, 5556–5559; that literary distinction is less valued at Eton than at Harrow, 8201–8207; that the scholarship is not so good as formerly, 9050–9084, 8119–8149, 8165–8180; and that the boys from Eton are less successful at the matriculation examination for Christchurch than boys from the smaller and less fashionable schools; West., 190–217, 241–255; opinions notwithstanding that the time at Eton is advantageously passed, E., 8875 et seq.; overwhelming preponderance of Cambridge over Oxford men among the Masters, which places Eton boys on a disadvantage in the competition for the Balliol scholarship with candidates from Marlborough or Rugby, E., 8169.
Evans, Rev. Charles, M.A.:
His evidence, R., IV., p. 277.
Evans, W., Esq.:
His evidence, E., III., p. 260.
Ewart, John, Esq., Master of Merchant Taylors' Company:
His evidence, IV., p. 115.
Examinations:
At Eton, 5567 et seq., 1837–1863, 2670–2678, 5710–5712; entrance, 5460 et seq., 5538–5540, 5555 et seq., 3819–3831, 1228–1279, 1312–1329, 8971–8980, 1821 et seq.
For King's College, 8806 et seq.
At Winchester, 1254–1258, 1260–1264, 1280, 338–346, 553 et seq., 606 et seq.
At Westminster, 15–21, 104–126, 173 et seq., 879–883, 1075–1078, 1102–1105.
At Charterhouse, 240–249, 258–263, 727–766, 900 et seq., 1396–1399, 1222–1224, 1158; competitive, 265–268, 1408–1434; entrance, 269, 285–292, 445 et seq., 1389–1395, 643–654.
At St. Paul's, 945–960; entrance, 291–301, 597 et seq.; opinion that it should be higher, 911 et seq., 597–608.

Examinations—*continued.*
At Merchant Taylors', 100–112, 455–468; entrance, 424–433; for scholarships, 19, 23–28, 217–226, 506 et seq.
At Harrow, 124–126, 306–316, 337–343, 355–357, 361–366, 405–411.
At Rugby, 1497 et seq., 710–780.
At Shrewsbury, 931–982, 1280–1307, 510–541; scheme, 99 et seq.
Matriculation for Christchurch described; the boys from the smaller and less fashionable schools better prepared than at Eton, Westminster, &c., West., 190–217, 241–255.
Matriculation in science at the Universities of Oxford and London, Gen. Ev., Airy, 25–29; Carpenter, 4–8, 42–44.
Matriculation at King's College. (*See* King's College.)
Examiners:
At Eton, 5567–5571.
At St. Paul's, 430–434.
At Merchant Taylors', the only visitors, 234–246.
Exeat Sunday at Harrow:
Explained, 367–371, 667–669, 635 et seq., 667–669.
Exhibitions:
At Eton, 5567 et seq.
At Winchester, 1260 et seq., 84–108, 925–929, 527–531, 1458 et seq.; Bedminster, 36–56, 86–125, 526; Dobson's Superannuates' Fund, 58–126.
At Westminster, by competition, 1726–1755, 1087–1096, 2366–2383.
At Charterhouse, 240–249, 1462–1475, 620–632.
The Talbot, 252–254.
At St. Paul's, 439 et seq., 748 et seq.
At Merchant Taylors', 61–68, 506 et seq.; Little, 533 et seq.
At Harrow. (*See* Sayer gift, Property).
At Rugby, 92 et seq., 190–195, 484–488, 809–813.
At Shrewsbury, 1178–1217, 92–98, 519–541; scheme, 137–150; preference to Shrewsbury and Shropshire boys, 1178–1217, 131–136, 781 et seq.; Careswell, 92–98, 519–541.

F.

Fagging:
At Eton, 7521 et seq., 9103 et seq., 4643–4702, 7213–7240, 5793–5830; scarcely to be regarded as objectionable, 9103–9358, 8441–8453; at cricket, abolished, 2965 et seq.
At Westminster College, variously spoken of, 995–997, 1240–1269, 2160–2193, 465–471; described by Mr. Meyrick as oppressive, degrading, and brutal, its effect on his son being to destroy his health, render visits to Brighton for change advisable, and ultimately necessitate his withdrawal from school, 2476–2583; described by the son himself in great detail, 2586 et seq.; by another boy, 2949 et seq.; fagging interferes with school-work, 2682–2685, 2736–2738, 1250 et seq.; contrary opinions, 2966–2976; practically no appeal, 2811–2817, 3256–3274; as to counter benefit in protection from bullying, 2582 et seq.; punishments, 2601 et seq., 2977 et seq.; it is a tradition of the school that fagging was formerly worse, 2892 et seq.; fagging would not be objected to if under the superintendence of the masters, 2921 et seq.; an increase of servants would enable fagging to be abolished, 2907–2917, 3082–3089, 3277–3281; complaint of the Meyricks, father and son, replied to by the Rev. W. Scott, the Head Master; some of their statements alleged to be untrue, others to arise from misconceptions; some admitted to be well grounded, and the practices at once prohibited; some of the matters complained of he vindicates, 3373 et seq. at great length; letter of the Rev. Mr. Ingram, also impugning some of the statements of the Meyricks, p. 521; evidence of Mr. Alan Stewart, a colleger, that these complaints are mainly exaggerations, and that the fagging, generally speaking, is not over severe, 3303 et seq.
At Winchester, for prefects only, 1097–1107, 1556–1981, 755–764, 1397–1408, 1534–1544; at cricket and games, 1134–1146, 1155–1158, 1556–1981, 765–781.
At St. Paul's, none, 545.
At Charterhouse, right to fag only conferred by master, who would withdraw it if abused, 1555–1561; description of fagging, 1562–1595, 938–952, 1045 et seq.; description of fagging by a junior boy, including fire fagging and cocks-fagging, 1706 et seq.; not abused or disliked, 1562 et seq.; a master protects his fag, 1604 et seq.
At Merchant Taylors', none, 732–751, 806, 632 et seq.
At Harrow, 288–291, 990–992; confined to Sixth Form, and scarcely objectionable, 705 et seq., 990 et seq., 1944–1946, 1623–1626, 1646–1650; cricket fagging, 757, 2020–2024, 1668–1675.
At Rugby, by the Sixth Form, 2023, 2024, 2112 et seq., 1528 et seq., 1616–1636; not menial or extensive, 970–976; cricket fagging, 1630–1636; at games, 977–992, 1630–1636; gross abuse would come to the knowledge of the masters, 993–999; study fagging, 1619–1629.
At Shrewsbury, only by the 12 præpostors; is very moderate, neither extensive nor menial, 1057–1064, 636–645.
Faraday, M., Esq., F.R.S.:
His evidence, Gen. Ev., IV., p. 375.
Fearon, W. A., Esq.:
His evidence, Win., III., p. 367.
Fees. (*See* Emoluments.)
Fellows and Fellowships. (*See* Provost and Fellows, Superannuations, and Benefices.)
At Eton, connexion with college must interfere with parochial duties, 3102–3104, 3107, 3108, 3191–3196; emoluments of, 5602–5907, 4867 et seq.; elected from the Masters who are King's men, 4867–4871, 4247–4249.
At Winchester, 148–152, 155–176, 185 et seq., 191–201, 202–209; some to be suppressed and converted into scholarships, 29 et seq., 127–130, 362 et seq.; fellowships regarded as retiring allowances, 359–361.
At Rugby, 61–91, 544–547.
Fellows of King's College, E., 6758–6766.
Fencing:
At Charterhouse, 955 et seq.
Fighting:
Very little at Eton, 9355–9358, 7203–7212, 8608–8611.
At Westminster, 2853–2872.
At Charterhouse, 2061–2078.
Filii nobilium at Eton, 1498–1527.
Fines:
At Eton. (*See* Eton, property.)
Fires:
At Eton, 8736 et seq.
At Westminster, 1804, 1909–1913.
Fisher, Rev. G. W., Mathematical Master at Shrewsbury School:
His evidence, Sh., IV., p. 348.
Fluctuations at Charterhouse, 28 et seq., 53 et seq., 65, 50, 115 et seq., 119–132, 159 et seq., rise and fall owing to introduction of the Bell monitorial system, 543–560.
Focalia at Eton, 496–535.
Food. (*See* Diet.)
Foot-ball:
At Eton, 5333; not compulsory, 5363 et seq.
At Winchester, 765–781; fagging, 765–781.
At Harrow, 751–763, 2025–2029.
At Shrewsbury compulsory, 633–645.
Fagging, at Charterhouse, 1794–1809.
Founder's kin at Harrow:
Mentioned in John Lyon's will, but not known to exist, 1004–1015.
French:
(*See* Modern Languages.)
At Eton; importance of French, 5053–5064, 5460, 5461; no *bonâ fide* attempt yet made at Eton to teach French, 6244–6254, 6258–6260; literature, 4148–4150.

G.

Gambling:
At Charterhouse, 1551–1554.
At Rugby, 1590–1592.
At Harrow, little of it, 1930–1932.
Games:
At Eton, 7868 et seq., 5921 et seq., 6077–6086, 4608–4627, 5392–5414; respect paid to masters who join in, 8601–8603, 7421–7428, 8265–8270, 5305–5317; distinction more coveted in games than in learning, 5305–5317; no necessary connexion between intellectual superiority and superiority at games, 5360–5362.
At Winchester, 765–781; fagging at, 1134–1146, 1155–1158, 765–781.
At Westminster, 1296–1303, 2194–2215, 1881–1888; fagging at, 2820–2822, 2959.
At Merchant Taylors', time for recreation, 900 et seq., 640–646.
At Harrow, 2007–2029, 1552–1567, 1868 et seq.; attendance compulsory, 751–766.
At Rugby, 1840–1850.
At Shrewsbury, 1262–1269, 674 et seq.; expenses, 674 et seq.
Geography:
At Eton, 2644–2662, 5048–5052.
At Winchester, 1281 et seq.
At Westminster, introduced by Dr. Goodenough, 945–947, 2392, 2403–2406.
At St. Paul's, 1045–1051, 338 et seq.
At Merchant Taylors', 928–937, 448 et seq.
At Charterhouse, 1664–1671, 460–469, 720–726.
At Harrow, 898–900, 1994–1997, 1796–1801.
At Rugby, 1891–1901, 1910–1913.
At Shrewsbury, 1249–1253, 1262.
German:
(*See* Modern Languages.)
Gymnasia, the, Gen. Ev., their effect, more science taught in Germany than in England, Lyell, 49 et seq.
Literature, as connected with Theology, Gen. Ev., Max Müller, 157 et seq.
Goddard Benefaction at Winchester, 78–83, 606 et seq.

Goddard Scholarship at Winchester, 1280.
Godolphin Fund. (*See* Eton Property), E., 199–267.
Goodford, Rev. C. O., D.D., Provost of Eton :
His evidence, E., III., p. 1.
Government of College and Schools :
At Eton, power of Provost and Fellows and Masters, 3010–3036, 3122–3128, 3037–3041, 3052–3062, 3069–3073.
Suggested modification of, 4142–4147, 4151–4175, 4187–4222.
Of different colleges, 4187–4222.
At Winchester, to a great extent double, 1265–1267, 71 et seq., 127–130, 152–154, 185 et seq., 191–201, 228, 259–266, 347 et seq.
At Westminster, Head Master controls every thing, subject to the interposition of the Dean, 577–591, 1328–1330 ; Under Master's charge of the college, 577 et seq.
At Charterhouse, power of Governors over Head Master. (*See* Charterhouse.)
At Rugby, in 12 trustees, R., 133–140, 188 et seq. ; Head Master, with their sanction, exercises power over the whole school, 133–135, 146–151, 342 et seq., 569–573 ; Assistant Masters have large discretion, but the Head Master is consulted and is responsible for everything, 574–586 ; the big side levee, 969. Government of Rugby described by Mr. Johnson, a master at Eton, as a pure despotism, E., 4187 et seq.
At Shrewsbury, modification suggested in, 259–262, 265–269.
Governors of Charterhouse, how vacancies are filled by the Archbishop of Canterbury, Ch., 1359–1363.
Grammars and Books:
At Charterhouse, good, 100.
At Harrow, 1141 et seq.
Gratuitous Education :
At Eton, 1414–1449, 4834, 3758.
At Westminster, intended originally, but fees were taken in early times, 74–78, 85–87, 1932–1960, 1970–1980, 341–359.
At Charterhouse. (*See* Charterhouse.)
At Shrewsbury, 66 et seq., 153–156, 363–367.
Graves, Charles Edward, Esq.:
His evidence, Sh., IV., p. 351.
Greek Language : First taught in England at St. Paul's, by Lilly, 906 et seq.
Greek Iambics :
At Eton, 5421–5459.
Greek Play :
At Eton, 6187–6198.
At Merchant Taylors', 841–844, 1048–1050.
Greek Scholarship :
At Eton, has improved, 3813–3822.

Hale, Rev. Edward, M.A., Mathematical Master at Eton:
His evidence, E., III., p. 230.
Hale, Venerable W. H., M.A., Master of Charterhouse:
His evidence, Ch., IV., p. 45.
Hare and Hounds:
At Rugby, 1958–1965.
At Shrewsbury, Hounds' dinner, 614–621.
Harris, G. F., Esq., M.A.:
His evidence, H., IV., p. 194.
Harrow School :
Classics the main study of the School, 344–350 ; well and efficiently taught, 1113–1115, 1117–1126, 1134–1140, 1266. Details of classical reading, &c., 2066-2082, 1853–1866, 1143–1161. But science, &c., taught there, 405–411, 351–353, 358–366 ; and more time cannot be given to mathematics, modern languages, &c., without remodeling the School and giving up Greek, (*see* Bifurcation, Deviation, and Aptitude), 374–404, 849–861, and 1389–1391. Already there is a falling off in scholarship, 863–881 ; contrary opinion, 1134–1140 ; the tone of the school high, 1873, 1933–1943, 1546–1551 ; and boys gain prizes at Oxford and Cambridge, 596 et seq. ; boys are sons of the higher classes, 583–585 ; sons of tradesmen of Harrow are entitled to the education of the School, but do not seek it, 177 ; destination of the boys who leave early, 586-599 ; only two Masters named in the Founder's will, the schoolmaster and the usher ; both removable, 17–20 ; as the Head Master may be required to preach, he must be in orders, 14, 15 ; school once broken up by scarlet fever, 977-981 ; improvements in the system of instruction suggested, 2058–2065, 1870, 1116 and note.
Havelock, the, Military Scholarship at Charterhouse, Ch., 736–766.
Hawtrey, Rev. S. T., M.A., Mathematical Master at Eton:
His evidence, E., III., p. 217.
Haycock, Alderman:
His evidence. (*See* Corporation of Shrewsbury.)
Head boys:
At Westminster, have power of monitors out of school, 2107 et seq.
Head Masters:
(*See* Masters and under heading of the various schools.)
Health of the boys:
At Charterhouse, good, 1053 et seq.
At St. Paul's, injured by peculiarities connected with the site, 587–596, 612 et seq., 840 et seq.
At Merchant Taylors', good, 1128–1130.
Hebrew:
At Westminster, efficiently taught a few years back, 948 et seq. ; since discontinued, although required by the statutes, 626 et seq., 360–365.
At Merchant Taylors', Hebrew is taught and many of the men obtain prizes for Hebrew scholarship at Oxford, 944–956, 274–281, 313 et seq., 495–497, 502 et seq., 552.
Hefford, W. George Valentine :
His evidence, R., IV., p. 241.
Helps at Westminster, explained, West., 104–126, 133–142, 3713, 2316–2318.

Taught botany successfully in a National School, Gen. Ev., Hooker, 4–32, 67–69, 98 et seq.:
Hessey, Rev. James Augustus, D.C.L.
His evidence, M. T., IV., p. 120.
History:
At Eton, 5214–5216, 3735–3745, 2644–2662, 5048–5052 ; Natural, E., 5418–5420. (*See* Natural Science.)
At Winchester, 621 et seq., 1482–1489.
At Westminster, 2402–2406.
At Charterhouse, 1664–1670, 460–469, 705–707, 720–726.
At St. Paul's, 1044 et seq., 338 et seq., 640, 644, 661–667, 790 et seq.
At Merchant Taylors', 928–937, 448 et seq., 553.
At Harrow, 351–353, 358–366, 1994–1997, 1796–1801.
At Rugby, 609–619, 624–627, 638 et seq., 1891–1901, 1910–1913.
At Shrewsbury, 1249–1253, 1262, 502–506.
Holidays:
At Eton, 4039–4048, 2970–2977, 4392–4399, 4543–4554, 9044–9049, 8208, 8209.
At Winchester, 782–792.
At Charterhouse, 1650–1651.
At St. Paul's, 553–558.
At Merchant Taylors', 633–639, 1120–1127.
At Shrewsbury, 646–662 ; extra, earned by good conduct, 580–586.
Holiday tasks:
At Eton, 3960–3963.
At Harrow, 882–837.
At Rugby, 620–623.
At Shrewsbury, 646–651.
Home boarders:
At Westminster, on equality with hall boarders, 779–783, 3742–3759.
Discipline of, at Rugby, 2112–2120.
Hooker, J., Esq., M.D., F.R.S., Assistant Director of the Botanical Gardens at Kew:
His evidence, Gen. Ev., IV., p. 382.
Houses:
(*See* Boarding Houses.)
At Eton, Assistant Masters, 242 et seq., 672–681 ; Head Master, 1684–1696 ; dames, 1871 et seq., 1902 et seq., 1928–1931 ; college, 6775–6802.
Hughes, Alderman:
His evidence. (*See* Corporation of Shrewsbury.)
Hunt, Henry A.:
His evidence, West., III., p. 522.

I.

Illegitimate children:
Excluded from competition for Eton foundation, 1258–1279.
Impositions:
(*See* Punishments.)
At Eton, Latin, 2939–2941, 2956–2958.
At Winchester, 1326–1347, 603 et seq.
At Westminster, 2453–2459.
At Charterhouse, 910–918, 1013–1017.
At St. Paul's, short and rare, 675–678, 900–904.
At Merchant Taylors', 184 et seq., 580 et seq., 1010–1023.
At Harrow, 677–686, 1768–1776, 1162–1179; set, for neglect of mathematics as well as classics, 1365–1377.
Impositions, effect of, on handwriting:
At Rugby, 1998–2102.
At Harrow, 677, 678, 1768–1776, 1162–1176.
Improvements accomplished:
At Eton, 219–243, 8101–8109. (*See also* Eton, Property.)
At Winchester, by the Warden and Fellows, 359–361.
At Westminster, 544 et seq., 1814–1822, 1881–1888, 378–387 ; sanatorium, 1766, 1889–1901, 2003–2006.
Improvements suggested:
At Eton, more Greek prose and composition wanted, 7475–7477 ; modern languages to be more attended to, 8875 et seq.; 6968 et seq.

Improvements suggested—*continued.*
At Winchester, enlargement of the dormitories, 970–973; increase in number of boys, 399 et seq.; that Sixth Form boys should remain beyond 18 years of age, 535–541.
At Westminster, 3858–3866, 1588–1611, 1001–1003, 1328–1330, 3727–3739, 1814–1822, 1846–1870, 258–268, 366–369; partial opening of the college gardens, 1630–1635, 928–938, 3740, 3741; opposite opinion, 1871–1880; a chapel for occasional services and addressing the boys, 1636–1640; increase of number of scholars, 22–24; making the school a day school, 49–51; private study to be re-introduced into the Sixth Form, 1687–1690; addition to libraries, 1151–1156; more servants wanted in order to abridge fagging, 2907–2917, 3082–3089, 3277–3281, 3463–3644 et seq. at great length; other points, 1961–1969.
At Charterhouse, 264, 270–276, 1284–1291, 1316–1320; improved lavatories, 406–409; separation of school and hospital, 599 et seq.; increase of scholarships, 638–641; improvement fund, 1276–1281:
At St. Paul's, 906–910; higher examination wanted, 911 et seq.; as to nominations, 911–937; mode of weeding out the dunces, 938–960; extension of the school, 961–976, 983–989; building a new one, 980–982, 999–1008; Head Master should have power over the whole school, 1020–1023; another master wanted, 418–429, 609 et seq.; more competition wanted, 1024–1034; increasing the number of the boys, 508 et seq., 569–578; age on admission should be greater, 620–626; more time wanted for mathematics by those having a taste for them, and more for mathematics might be obtained by abridging the classics, 218 et seq.; 262–285; the number of boys might be doubled, 508 et seq., 569–578, 164–172.
At Merchant Taylors', that drawing might be made optional, 961–963; that there should be an independent arrangement for French, 145 et seq., and more time, if possible, given to the study, 182 et seq.; more masters wanted, 254–271; that boys without mathematical talent might learn German, 371–499; in the admission, 427–429; desirable to have a chapel for morning and afternoon prayers and occasional addresses, 577–579; extension of the playground, 648–653; extra holidays and more exercise, 1120–1127; &c., 315–320.
At Harrow, 1870 et seq., 2058–2065, 1873, 1116 and note, 1304 et seq., 1359–1364, 1389–1391.
At Rugby, improvements to be sought less in great changes than in details, and more masters, 1165–1177, 1184, 2360–2391, 1482, 322–325, 1049–1060, 1966–1971, 1593–1597; school chapel and alms houses, 18–40; &c., 1129 et seq., 1786–1806.
At Shrewsbury, 259–262, 265–269.
In General Evidence, lectures on natural science, Owen, 12–15, 42 et seq., 68–74, 16–19; without disturbing classical learning as the basis of English education in the public schools, there is no difficulty in adding science, Airy, 101 et seq.

His evidence, H., IV., p. 228.
Languages:
(*See* Classics and Languages, Modern.)
Languages, Modern.
(*See* Masters and French.)
At Eton, not compulsory, 8851 et seq., 3801–3808, 7795–7821, 8875 et seq., 7908 et seq., 5418–5459, 3735–3745, 2367–2488, 4148–4150, 4445–4467, 4525–4554, 4736–4750, 6885–7048, 9359–9412, 6072 et seq., 6240–6260, 3801–3806; opinion that they ought to be more attended to, 8875 et seq.; a difficulty in introducing them, 5214 et seq.; not popular with masters or boys, 6935–6967.
French introduced by the late Provost, about half the boys take it up, but it does not tell in the school, 3801–3808; French masters cannot keep discipline, 5217–5241, 3809–3811, 2367–2485, 6972–6977.
German and French, 6072 et seq., 3735–3745, 6978 et seq.
Italian, 3735 et seq.
The Albert prize for modern languages, 6072 et seq., 3735–3745, 6978 et seq.
At Winchester, French taught effectively, 864–918, 1268 et seq., 328–346; the boys pronounce well, 585 et seq.; some speak well, 867 et seq.; more time required for it, 867 et seq., 1470–1480, 1490–1492.
German taught, 1268 et seq., 328–346, 1470 et seq.; more might be done in modern languages and physical science without trenching on classics or recreation, 1530–1533.
At Westminster, French is obligatory, 949, 1023–1027, 1037–1055, 1072–1074, 2384–2401, 437; but not popular, 440–452; French master has little difficulty in managing the boys, 440–452. Latin the foundation of modern languages, 949.
No demand for German, 437–439.
At Charterhouse, French is taught, boys read average French books and newspapers, but do not converse well, 1652–1663, 475–481, 495–498, 489 et seq., 499–502, 507–509, 699–719, 668 et seq.
German also taught, 229–239, 491–494, 503–517, 735, 741–748, 1195 et seq., 710 et seq.
Boys regard modern languages as inferior to classics and mathematics, 699 et seq.
At St. Paul's, French is taught to all except boys whose parents desire their sole attention to be given to classics and mathematics, 1052 et seq., 826–831, 302 et seq.; details of the teaching, and its satisfactory results, 340–394.
German not taught, 832.
At Merchant Taylors', French introduced in 1846, 455; taught well, and prizes given for it, 906–924, 74–187, 450–468; but not much esteemed, 906 et seq.; more time wanted for it, 1105 et seq.; extent of French acquired, 96 et seq.; less interest in French than in classics, 140–143.
German not taught, 908.
At Harrow, French or German compulsory since 1857, 374–404, 1802–1806, 1828–1831, 1415–1463; boys can be taught to read, but not to speak fluently, 374–404, 846–848, 1977–1993; progress satisfactory, 843–845, 1415–1463; but looked down upon, 1977–1993; a foreign master finds no difficulty as to discipline, 1467–1470.
At Rugby, 1209–1218, 2228 et seq., 1484–1496, 99–120, 125–132, 287–310, 628–637, 640–675, 1061 et seq., 1851–1905, 1405–1412; better taught at Rugby than abroad, 1490–1493; pronunciation, 1209–1213, 1468–1479, 287–310, 1851–1884; conversation classes not taken up heartily, the time is taken from the games, 1420–1432, 2228–2257, 1433–1465, 1480 et seq., 1874, 1889; some boys well up in French, 1433–1465; no difficulty as to discipline, 1466 et seq., 287–310, 1851–1884.
At Shrewsbury, French well taught, 1233–1246, 186 et seq., 244 et seq.; and as part of the curriculum, 981–985; but not considered in the general examinations, 499 et seq.; prizes, 499 et seq.; French master's position the same as that of other masters, 186 et seq.
German taught, 1247 et seq., 186 et seq., 253 et seq.; fair progress made, 943 et seq.; it is optional, 981–985.
Modern languages require more time, 981 et seq.

Languages, Modern—*continued.*
General evidence:
At Oxford, Gen.Ev. Max Müller, 1–6; since Royal Artillery and Indian Civil Service have been thrown open to competition the attainments of boys in modern languages have greatly improved, but the boys who carry off the Taylorian prizes are sons of foreign parents, or boys who have enjoyed special advantages with regard to the acquisition of foreign languages, 7–19; details as to learning French and German, 20 et seq.; also other modern languages, 153 et seq.
Latin prose:
At Eton, 7902 et seq.; translations, 7902 et seq.
At Shrewsbury, 487–498.
Latin scholarship:
At Eton, has fallen off, 3813–3822.
Latin verse:
At Eton, 5156–5158, 5421–5459, 4991–4999.
Lavatories:
At Charterhouse, 1033–1041, 1058, 1082–1085. (*See* also Bathing and Washing.)
Leaving breakfast:
At Shrewsbury, Sh., 612–621.
Leaving presents:
At Eton, 3210–3212, 6255–6257, 2344–2366, 4720–4722, 9467–9473, 5300–5302.
At Rugby, none, 2334.
Lee, Rev. Godfrey B., M.A., Warden of Winchester College:
His evidence, Win., III., p. 323.
Lethbridge, William, Esq., M.A., Mathematical Master of St. Paul's:
His evidence, St. P., IV., p. 79.

Marlborough:
System at. (*See* Bifurcation.)
Marshall, Rev. James, M.A., Senior Assistant Master of Westminster School:
His evidence, West., III., p. 452.
Masters:
At Eton, Head Master should be in orders, though this is not required by the statutes, 872–878; with Provost, governs the school, 942 et seq.; his power and duties, 1148–1210, 1812–1819, 1826–1832, 1836 et seq.; is overworked, 5192; remedy for this, 3773–3779; opinion regarding an addition to the masters, 5193 et seq., 5480–5485, 5506–5508; Classical Masters, 2058 et seq., 5963 et seq., 6155 et seq., 1871 et seq., 2640–2643, 6327–6331; they are all Eton men, 2078–2089, 3250–3260, 6015–6029, 6050–6055, 6043–6048, 5518–5525, 5531–5535, 3765, 2090–2133, 6470–6485, 4223–4235, 4238–4241, 6732–6738; they are all overworked, 5188–5213, 5487, 8122–8149, 8181–8187; Lower Master, 5939 et seq.; his power and duties, 1210–1227; proportion of masters to boys, 3406–3419, 5940 et seq., 5488 et seq.; Mathematical Masters, their status, lower than that of the Classical Masters; they have less power, and less respect is shown to them, 3432–3492, 7773 et seq., 1960–2053, 2059–2077, 6722–6731, 6747–6753, 5117–5122, 4258–4302, 4312–4314, 6043–6048, 1918–1959, 2034–2037, 6261–6326, 6332–6469; Assistants, 6009–6022, 3761–3764, 1871 et seq.; Lower, 6059 et seq., 6155 et seq.; French, 3508–3547, 5217–5241, 6240 et seq., 3832 et seq.; German, 3832 et seq.
At Winchester, 1265–1267, 177–181, 210–222, 542–605; appointed by Warden, 347 et seq. to a great extent.
At Westminster, 1695 et seq., 551–568.
At Charterhouse, 98–113, 175–190, 219–221; their duties defined by the statutes, 194–214, 161–174; Head Master and Second Master must be Carthusians, 181 et seq., 188–190; Head, has not sufficient control over the internal arrangements of the school, 1140–1142.
At St. Paul's, 399–406, 418–429, 609 et seq.; all elected annually, 154–163; another wanted, 418 et seq., 609 et seq.; High Master at St. Paul's elected annually, 302–314, 399–406; practically he directs and governs the school, but is entirely under the corporation of the Mercers' Company, 315–323; no difficulty in procuring masters at present salaries, 417; the existing non-responsibility of the school authorities for the boys out of school, morally disadvantageous to the pupils, 186–189.
At Merchant Taylors', must be Protestants, 69–73; prohibition of Roman Catholics not the rule but practice, 348–350; their number and salaries, 256–271, 282–312; no difficulty in providing masters at existing emoluments, 282–298; discipline, 344, 345; Head Master cannot introduce a new subject of education without consulting the Corporation, 440 et seq.; his power otherwise absolute, 440–447.
At Harrow, Head Master has the sole responsibility of the school, but is removable by the Trustees, 29 et seq., 43–51, 325–333.
At Rugby, 215–224, 344–346; all University men except one foreign language master, 344–346; no preference given to Rugby men, 344–346. Power of Head Master, 133–135, 146–151.
At Shrewsbury, all the masters are University men, except the modern languages masters, 273–276; Head Master has entire direction of the school; 263 et seq., 270–272, 326–328, 449–454.
Mathematical Masters:
(*See* Masters, &c., under the various school headings.)
Mathematics:
At Eton, 7919 et seq., 5418 et seq., 6480–6563, 6583–6590; details of teaching, 3832, 8604–8613, 9366, 9441–9447; lower status of masters, 5472–5479, 6564–6582, 8624. 8625; former treatment of mathematical masters prejudicial to the study of mathematics, 6705–6719, 6261–6326.
At Winchester, 1283–1288, 285–288, 1481.
At Westminster, introduced in 1828, 945–947, 565, 574–577, 1020–1071, 2305–2310, 437–439; less efficient than classics in mental training, 1056–1064; private work prize, 2311–2315.
At Charterhouse, compulsory, and well taught, 1672–1675, 445 et seq., 475–485, 495–498, 510–514, 702, 666 et seq., 1144–1151, 1170–1189; tell in promotions, 510–514; private instruction, 1679–1682; great improvement recently in mathematical learning, 1160–1165, 1195 et seq.; as much time given to mathematics as can be spared, 1160 et seq.; no difficulty in arranging the school so as not to interfere with classics, 1190–1194.

Mathematics—*continued.*
At St. Paul's, taught to all, but subordinate to classics, 335–337, 211–285, 845–870 ; school for mathematical purposes differently classified, 211–217 ; Paulines obtaining honours at Cambridge, rather few of late, 845–870 ; mathematical master has not the status of a resident master, 218 et seq. ; sufficient weight not given to mathematics ; opinion that making two mathematical marks equal to one classical, would give what is wanted, 262–285.
At Merchant Taylors', 874–896 ; encouraged, 321–336, 469–475, 1105–1119 ; Merchant Taylors' men think most of classics, but occasionally become wranglers, 874–885 ; proficients in mathematics must learn drawing, 71 et seq., 321–327.
At Harrow, introduced in 1845, and now studied in real earnest, 372–384, 1269 et seq., 1365 et seq., 1804–1806, 1392–1403 ; result satisfactory, 1998–2006, 1304 et seq., 1341–1358, 1389–1391, 1870–1876, 1409–1415 ; but for further progress more time is wanted if it could be obtained 1304 et seq., 1359–1364. 1389–1391.
At Rugby, extent of teaching, 1310–1330, 2274–2284, 2259–2306, 125–132, 628–637, 664–676, 1037–1048, 1362, 1363 ; strongest in classics generally the strongest in mathematics, 1326–1344 ; private tuition, 1345–1349, 2274–2279, 781–808, 814–828.
At Shrewsbury, mathematics are part of the curriculum, and compulsory ; range from arithmetic to the differential calculus; time devoted to them four hours a week, 902–919, 240–244 ; do not conflict with other teaching, 922 et seq.; marks given for them same as for classics, 924–927 ; progress, 928–931 ; examinations in, 931 et seq. ; best mathematicians are generally average classical scholars, 933–936 ; their value as a complement to classical and non-collegiate education, 695 et seq.
General Evidence :
Mathematics proper to be known by a boy of 18, Airy, 30–40, and to be learned afterwards, 47–87 ; opinion that without disturbing classical learning as the basis of English education at the public schools, there is no difficulty in superadding mathematics and science, Airy, 101–105.
Matron, authority of :
At Westminster, 784–789.
Mayor, Rev. R. B., Mathematical Master at Rugby :
His evidence, R., IV., p. 280.
Meals. (*See* Diet.)
Mechanics, at Charterhouse, 853–864.
Medical Attendance at Eton, 4771–4799.
Mental Training :
What it is, Gen. Ev., Faraday, 27–31, 55–57, 74 et seq. ; order of, observation before reasoning ; therefore, natural science before grammar and mathematics, Carpenter, 65–70 et seq., 88–105 ; Faraday, 42–45, 55–57 ; Hooker, 35–39.
Mathematics less efficient than classics, West., 1056–1064.
Natural Science important, but not as an instrument of mental training, Win., 481–520.
Classics and Natural Science as part of Mental Training, Gen. Ev., Faraday, 42–57.
Mercers' Company, the statutable superintendents of St. Paul's School, 302–323 ; but they do not interfere with the Head Master, 302–323.
They are owners of the Coletine estates, out of which St. Paul's School is supported, 1–25.
Merchant Taylors' School :
A day-school only ; much time lost by boys going home, 785 ; boarders prepared school-work in boarding houses, 754, 770 ; scholarship, however, not perceptibly different, 787 ; classics predominate and are most esteemed, 873–883, 272–274, 448 et seq., 1048–1050 ; efficiently taught 887–893 ; relations between Merchant Taylors' and St. John's College, Oxford, 1–4, 15–18, 20–22 ; nominations, 5–10, 16, 402, 403 ; is under the control of the Company, 11–14, 29–40 ; has no fixed revenue, 193–198 ; supported by the Company, 41–44 ; boys principally sons of professional men, but some are sons of merchants and tradesmen, 56–60, 654–656 ; dissenters' sons admitted, 35–39 ; peculiar classification of the school, 346 et seq. ; Merchant Taylors' men go to Oxford as well prepared in scholarship as men from Eton, Harrow, and Winchester, 957–960 ; destined for the learned professions, 964–966 ; further results of the teaching, 1025–1027, 1051, 1036–1104.
Merit, boys on admission placed according to, Sh., 437–446 ; the result satisfactory, 447 et seq.
Merit Money, at Shrewsbury, introduced by Dr. Butler, 433–436.
Mesmerism :
Importance of scientific training, Gen. Ev., Carpenter, 22–24 ; Faraday, 75.
Meyrick, Mr. W. S.:
His evidence, West., III., p. 484.
His written statement, p. 475.
Meyrick, William, Esq.:
His evidence, West., III., p. 475.
Middlemist, Rev R., M.A. :
His evidence, H., IV., p. 211.
Millington Bequest, Sh., 1–51.
Mitchell, R. A. H., Esq.:
His evidence, E., III., p. 242.
Moberly, Rev. George, D.C.L., Head Master of Winchester College :
His evidence, Win., III., p. 331.
Modern School. (*See* Bifurcation and Deviation.)
Modern Languages. (*See* Languages, Modern.)
Monitorial System:
At Eton, 8748 et seq., 3333–3351, 3360–3362, 7521–7569, 1475–1478, 2848–2883, 2959–2964, 4816–4831, 4575–4642, 8358–8378, 7105–7183, 9493–9499 ; monitorial and prefect power on the decline, 2878–2883 ; duties of monitors, 8748 et seq., 2857–2882, 7105–7183, 7248.
At Westminster, 2110–2114, 3185–3205, 1200–1220, 1230–1239, 2081–2107 ; punishments by, 1200–1220, 1230–1239, 1282–1285, 2081 et seq.
At Charterhouse, 1516–1516, 164–167, 410, 929–937, 1013–1017, 1059–1062, 2118 et seq. ; power of punishment, 1516–1543 ; no complaint against the system, 1544–1546 ; Dr. Bell's systemand its result, 545–560.
At St. Paul's, regarded as satisfactory, 526–532 ; the 8th, or highest class, are monitors, 526–532, 704–714 ; no monitorial supervision out of school, and boys would be about town while supposed to be at cricket, 553–558, 717–734.
At Merchant Taylors', 721 et seq., 852–872, 619–630, 1004–1007, 1011–1013 ; monitors inflicted no punishment, but brought any complaint before the masters, 721 et seq.
At Harrow, the first 15 of the Sixth Form boys are monitors, under the head of the school, 707–750, 1499–1507, 1593 et seq., 1607–1611, 1538 et seq., 1580 et seq., 1836–1845 ; satisfactory, and a protection against bullying, 742 et seq., 907–957, 1883–1920, 1517 et seq., 1568 et seq., 1598–1634 ; right of appeal against punishment, 921–951, 1906–1928, 1517 et seq., 1583–1589, 1604–1607, 1612–1634 ; a monitor removed or degraded, or both, 948–951, 1542–1545, 1607–1611 ; power of head of the school, 1508–1516, 1538 et seq.
At Rugby, power of checking offences and immorality and preserving order vested in the Sixth Form ; punishments of caning and imposition by the Sixth Form ; abuse of this power kept in check by appeal ; power of Sixth Form useful in preventing bullying by the big boys, and settling little school matters without interference of the masters, 1124–1142, 1976–1981, 1985–2002, 868 et seq., 900–969, 1512–1520, 1530, 1538–1541, 1528 et seq., 1542–1572 ; and it is popular, 1976–1984, 868 et seq.
At Shrewsbury, the Sixth Form are præpostors, their duties are undefined ; they are supposed to look after boys, and check out of school boys doing wrong, with power, only traditional to punish by imposition and the cane, 1012–1022, 249–251, 322–325, 622–632 ; monitors obtain rank by literary ability, 605–607 ; wear a hat as proof of confidence, 608–611.
Montem, the, at Eton, 3069–3073.
Morals, at Eton, 7521 et seq.
Müller, Max, Esq., F.R.S., Taylorian Professor at Oxford:
His evidence, Gen. Ev., IV., p. 394.
Mure, James, Esq., a Queen's Scholar at Westminster :
His evidence, West., III., p. 424.
Music as part of education :
At Eton, 5418–5420, 5472–5479, 2813–2824, 6646–6677, 4148–4150, 4562–4574, 4750, 9516 et seq. Hullah's system tried, 6646–6677.
At Westminster, taught occasionally by Mr. Turle, the organist at the Abbey, 1555 et seq., 1157–1163.
At Shrewsbury, 576–579.
Mutilated children:
Excluded from competition for Eton foundation, the reason, 1258–1279.

N.

Natural Science:
At Eton, taught only by lectures, 2585, 2586, 6591–6645, 4750, 3548–3600, 7822–7832.
At Winchester, 1290–1305, 930–965, 481 ; important as knowledge, but not as an instrument of mental training, 481–520.
At Westminster, 231–240.
At Charterhouse, taught only a few years, 1676–1679, 1214–1226, 1225–1241, 1195 et seq. ; at present chemistry is taught in lectures, 1676–1679, 486 et seq., 518, 519, 853 et seq., 1222–1224 ; boys should begin early, 1242–1253 ; charge for science, 1254 et seq.; learning science has a tendency to increase a love of knowledge generally, 1195–1211.
At Harrow, is no part of the regular study of the school, 344–350 ; but is examined for, 405–411 ; and prizes awarded, 1807–1827, 1832–1835.
At Rugby, 2285–2288, 125–132, 2295–2297, 1037–1048, 1885–1888, 1902–1905, 1357–1414 ; chemistry and laboratory, 1374–1384.
At Shrewsbury, 699–706, 784 et seq.
General Evidence, the advantage of scientific study beginning to be appreciated ; Aclaud, 55–62, 5 et seq. ; Lyell, 7 et seq., Owen, 116 ; opinion that its teaching should

Natural Science—*continued.*
be compulsory at the Universities, 37 et seq., 51 et seq. (*see also* Public Schools), Owen, 16–19 ; importance of, to the medical profession, Acland, 69–71, 78–80 ; Hooker, 33 et seq., 40–54 ; and in training the mind, Carpenter, 107–111 ; great ignorance of the physical sciences among educated men, Hooker, 4–12 ; has been ignored, Lyell, 7 et seq. ; the schoolmasters did not know it, and were prejudiced against it, 8–16 ; Owen, 5–8 ; can be taught at an early age, Hooker, 13–32, 67–69 ; Owen, 75–79 ; Prince Albert prized natural science, Hooker, 92–97 ; Owen, 42–46 ; teachers of science will soon be supplied from Oxford, Acland, 51–53.

Natural Science as apart of mental training :
Gen. Ev., Acland, 24 et seq. ; Carpenter, 22–24 ; Faraday, 6 et seq. ; Lyell, 8–37 ; Owen, 9–11, 49–54, 22–24, 29–34, 38 et seq., 75–79, 88–100 ; opinion that without disturbing classical learning as the basis of English education in the public schools, there is no difficulty in superadding mathematics and science, Airy, 101–105.

New Buildings and Alterations:
At Eton, 660–671, 4790–4800.
At Charterhouse, 26 et seq., 264, 270 et seq., 1306–1309, 1055 et seq.
At St. Paul's, new school in the country suggested, 980–982.
At Merchant Taylors', contemplated by the corporation, 45–53.
At Harrow, 105–118.
(*See* Property.)

Newcastle Scholarship :
At Eton, 8638 et seq., 5541, 3751 et seq., 2703–2706, 2751–2776, 4380, 4381, 8567–8579, 5150–5153 ; monopolized of late by collegers, 5148–5153, 5541–5554 ; not gained by an oppidan for seven years, 3773–3779, 5286–5294.

New College, Oxford, supplied chiefly by Winchester men, Win., 1348–1352 ; elections open to competition by all the boys in the school, 278.

New Rugbeian Magazine, the, 1949.

New Schools:
Boys from, superior in mathematics to those from the old schools, but inferior in classics, H., 1998–2006.

Nominations:
At Eton, given up, and admission by examination substituted, 8971–8980.
At Westminster, in the Dean and Chapter from the commencement of the school, 1772–1776 ; now by competition, introduced by the Oxford Commission, 2056, 2080.
At Charterhouse, 1366–1369, 1380–1388, 1400–1407 ; by rotation, 1366–1369, 1400–1407.
At St. Paul's, 911–937, 607 et seq., 168–177 ; given recently on examination, 517–525 ; which ought to be higher, 597–606, 177–180 ; are eagerly sought after, 566–568.
At Merchant Taylors', 5–10, 402–403.

Non-Collegiate Class :
At Shrewsbury, 946–948, 213–226, 231–237, 549 et seq. ; do not make most progress in modern languages, 946–964 ; attend School of Design, 570–575 ; formed four or five years ago to meet a demand for a kind of commercial education ; instead of going into the Sixth Form, boys not requiring high scholarship to go to college are permitted to give up Latin composition and Greek and devote the time thus spared to extra mathematics, modern languages, physical science, and English composition, 844–852, 288–299, 213–226, 232–237, 549 et seq., 694 ; operation of the scheme, 227–230, 853–861, 213–226, 232–237, 549 et seq. ; special superintendent is not satisfied with it, 862–867, 872, 873 ; though complicated, it is found to work without difficulty, 896 ; perhaps extra progress has been made in modern history, 874 et seq.
(*See* Aptitude, Bifurcation, Deviation.)

Norton, Councillor :
His evidence. (*See* Corporation of Shrewsbury.)

Number of boys :
At Eton, 2564–2570 ; increase of, opinions thereupon, 2188–2233, 4753.
To a master, and opinions thereupon, restriction to 40, 7932–7936, 5418–5420, 1702 et seq., 5000–5006, 4503–4512, 9500, 3406–3419, 5940 et seq.
To a tutor, 2737–2744, 2779–2789.
At Winchester, increasing, 657 et seq. ; proposed further increase, 399 et seq.
To a teacher, should not exceed 40, 657 et seq.
At Westminster, decreasing during the last 40 years, 5–9 ; owing to the school becoming less open than formerly, and parents paying increased attention to sanitary conditions, 5–9 ; and cessation of the connexion of the school with great families, 10–14 ; more boys wanted, 266 ; fluctuations, 269–284 ; prosperity increasing, 988, 759–778.
Foundationers 40 in number, 92–100.
To a master, 569–573, 736–738, 757 et seq.
At Charterhouse, 28 et seq., 53 et seq., 65, 80, 115–118, 38 et seq., 561–563, 569–571 ; contemplated increase of foundationers from 44 to 60, 264, 270–276, 561–563 ; school generally limited to 200, 322–335, 1481–1488.

Number of boys—*continued.*
At St. Paul's, why fixed at 153, 961–970 ; might be doubled easily and with great advantage, 508 et seq., 569–578, 164–172.
At Merchant Taylors', 260–265 ; the school always full, 648 et seq.
At Harrow, 134–136, 151–174, 302–305 ; residence the only qualification for the foundation, 146–174.
To master, 119–133, 530–549.
At Rugby, 463 at present, 1028–1030.
To a master, 852–854, 1028–1030.
To a mathematical master, limited to 50, 283–286.
Boys in a form, 339–341, 1028–1030.
Private pupils, 339, 341.
At Shrewsbury, 332 et seq., 743–758 ; falling off caused by the condition of the buildings at Shrewsbury and by the establishment of proprietary schools elsewhere in the country, 334–339.
To a master, 256, 258.

O.

Oath, provided by the Eton statutes, against receiving fees for teaching, not taken by the Head Masters, 3181–3183, 2234–2255 ; no record of the oath provided by the statutes for a boy of 16 ever being taken, 1279.

O'Brien, Mr. George Thomas Michael:
His evidence, West., III., p. 495.

Okes, Rev. Richard, D.D.:
His evidence, E., III., p. 284.

Oppidans and Collegers at Eton:
Relations between the two classes, 8636–8646, 8733–8735, 7488–7520, 5178, 5541–5554, 3652, 1280 et seq., 1528–1580, 8338–8357, 7053–7104, 5713–5747, 8281–8283, 5286–5299 ; the distinction between the two classes much less than it was formerly, 2137 et seq. ; the condition of the collegers greatly ameliorated, 4754 ; effect of the larger payments of the oppidans is that they pay for a portion of the collegers' education, 3220 et seq., 4312–4348 ; classical superiority of collegers, 8647, 5148–5155, 5541–5554, 6874–6880, 8338–8357, 7053–7104, 8990–9006, 9488–9492, 5286–5294 ; one of the causes of this is the competitive examination which the collegers undergo and the oppidans do not, 5179–5187, 4336–4374, 8248–8252 ; inferiority of the collegers in games, except at foot-ball, 2992–2994, 5295 et seq., 5300–5304 ; opinion adverse to the distinction being retained, 4323, 9488, in school all are treated alike, 2137–2144 ; relative expenses, habits, &c. of the two classes, 367 et seq., 2156–2183, 4374–4379, 5713–5747, 5365–5370, 1280–1302, 1351–1358 ; extravagance discouraged, 5387–5398 ; oppidans prohibited from some of the prize competitions 2699–2702 ; when not prohibited they are seldom successful, 2699 et seq. ; as a body the oppidans have no obligation to work for their living, and their parents tell them so, 3001–3004 ; of late they have been improving, 3000.

Orders of the Governors of Charterhouse, all entered on the minutes, but those in force and those repealed can only be ascertained by searching the mass, Ch., 1344–1355.

Owen, Richard, Esq., F.R.S., Superintendent in the British Museum:
His evidence, Gen. Ev., IV., p. 387.

Oxford, Bishop of :
Claims to be joint Visitor of Eton, 1139 et seq. ; but the claim is opposed by the College, 1140–1145, 1619, 1636–1645.

P.

Parallel Divisions at Rugby, explained, 587–608, 1824–1834.

Parish School at Eton, 1634 et seq., 6678–6701.

Parry, Councillor:
His evidence. (*See* Corporation of Shrewsbury.)

Pastry shops. (*See* Diet)

Paul, Rev. Charles Kegan, B.A.:
His evidence, E., III., p. 199.

Peele, J. J., Esq., Town Clerk of Shrewsbury and Bailiff of the Free Schools:
His evidence. (*See* Dr. Kennedy, Corporation of Shrewsbury, and Governors of Shrewsbury School), also p. 343.

Pensioners, Gentlemen, at Charterhouse, Ch., 322–335, 1276–1291, 1321–1341.

Pestalozzi's teaching, E., 5472–5479.

Phillimore, Robert, Esq., D.C.L.:
His evidence, West., III., p. 428.

Physical Science:
(*See* Natural Science.)

Physics, fundamental to all natural science, Gen. Ev., Acland, 13 et seq.

Physiology and anatomy, essential to the medical man, Gen. Ev., Hooker, 115–119.

"Play":
At Eton, 5418–5420, 4703–4719.

Play at Westminster, West., 3169–3172, 997–1001, 2450 et seq., 2460–2462, 388–405.

Playground:
At Winchester, the College Meadow, 808–816.
At Westminster, 1675, 985–988, 370–373, 459.
At St. Paul's, deficient, and want of it restricts the advantages of the school to mere learning, and excludes to a great extent the formation of friendships as at other large schools, 735–747.
At Merchant Taylors', very small and little used, 725–729, 1038–1042.
At Shrewsbury, 151 et seq., 665 et seq.
Playgrounds:
Want of, in the London schools, Gen. Ev., Browne, 27–56.
Play time:
At Eton, 7867 et seq.
At Rugby, 20 hours a week, 2347–2359, 1013–1018.
At Shrewsbury, 665–673.
Pocket money:
At Harrow, 969–971.
Poetry read by the boys:
At Eton, 7386 et seq.
Poverty declaration at Charterhouse, 372 et seq., 304–311, 1400–1407, 633–637, 641, 642.
Powis, Lord:
Opened exhibitions, Sh., 92–98.
Poynder, Rev. F., Assistant Master of Charterhouse:
His evidence, Ch., IV., p. 28.

Prayers. (*See* Religious Training.)
Prefects:
At Winchester, the 10 senior boys, 1044–1049, 734–754; their duties, 1050–1096, 1108–1123, 1130–1136, 382, 385–398, 625–656, 685 et seq., 734–754, 1380–1384; of the hall, 1050 et seq.
Private reading:
At Eton, 7833–7835, 5165, 8567–8579, 8614–8623, 7342 7420.
At Westminster, 1096–1101, 1106–1121.
At Merchant Taylors', 925–927, 938–943.
At Harrow, 1969–1973.
At Rugby, in general literature, 2307–2323, 1710–1718, 1914–1927; the *New Rugbeian* Magazine, 1949.
At Shrewsbury, 1254–1261, 1263, 470.
Private studies:
At Winchester, 459–468.
Private study prize, at Charterhouse, Ch., 767–795.
Private study, recommended by Dr. Phillimore, West., 958–964.
Private tuition. (*See* Tutorial System and Tuition, Private.)
Private work:
At Westminster, voluntary, 2387 et seq. at considerable length.
Prizes and Honorary Distinctions:
At Eton, 7867 et seq., 5156–5160, 3959–3963, 2664–2669, 2679–2736, 9539–9550.
At Winchester, 1015–1020, 606 et seq., 1458 et seq.
At Westminster, 2309–2315, 446–459.
At Charterhouse, 1645–1651, 518–539, 489 et seq., 767–795, 851 et seq., 867, 1222–1224.
At St. Paul's, 645, 871–877. Prize speeches originated here, 669–674; prizes for mathematics, but not publicly and with *éclat* as in the case of those of classics, 240–250.
At Merchant Taylors', 906–924, 524–556.
At Harrow, 361–366, 429, 1636–1645; for mathematics, 1311 et seq., 1367–1371; for modern languages, 1828–1831, 1464–1466; science, 1832–1835.
At Rugby, 2128–2138, 2327–2333, 1483 et seq., 866 et seq.
At Shrewsbury, 151 et seq., 510–541.
Professorial system, the:
At Eton would be objectionable, 3697 et seq.
Promotion:
At Eton, 5886 et seq., 2587–2639.
At Winchester, rapid, 521–526.
At Merchant Taylors', 351–360.
At Harrow, 317–323, 334–336, 1781–1783.
At Rugby, supremacy of classics insured by giving 78 marks for classics (including divinity and history), 12 for mathematics, and 10 for modern languages, 676–709.
At Shrewsbury, promotion by proficiency, Sh., 455–460.
Prompter, office of, at Merchant Taylors' School, 489 et seq.
Property. (*See* name of each School); also the following:
Eton College has property in 22 counties, held in trust by the Provost and College, in fee, under charter of Henry VI., with full leasing powers; also exhibition funds, 8–11. Details, 12–46, 1658–1671, 5614–5616. Progresses over the property required by the statutes long been in desuetude, 53–59. Leasing with fines disadvantageous, though not illegal, 69–70, 91; the system of letting leases run out, without renewal, augments the value of the property, 47–95, 180–191, 701–709. The fines divided among Provost and Fellows, and not audited, 108–174. The Godolphin Fund of 4,000*l.* left to improve the college food; the College borrowed the money for improvements, and accumulated the fund now amounting to 8,000*l.*; the interest is now applied to amend the diet, 199–267, 4762. The improvements consisted of a new wing to the College, St. John's Church, a cemetery, and sewerage, 219–243, 654–662. Rents in 1860 amounted to 10,807*l.* 15*s.* 5½*d.*, 272. Average repairs, 1,298*l.*, 274, 563–576. New buildings at Eton, 660–671.
Property—*continued.*
Of Westminster School, described, and its value estimated, 3759–3820. Fees in the hands of the Ecclesiastical Commissioners, 87–91, 1834–1845. The fabric fund applicable to the Abbey and appendages and to the School and appendages, 1807–1813, 1981–1996.
At Charterhouse, described, 1256–1281, 1334–1338, 599 et seq.; Smithfield, 1310 et seq.; accounts, 1256–1268.
St. Paul's:
The funds said to be far beyond the expenditure, 435–438; and the number of the boys might be doubled, 508 et seq.
The Mercers' Company's Coletine property, out of which the school is supported, described, 1 et seq., 55–63; for upwards of a century no fines have been taken on renewal of leases, 44–47; and the value has increased, 26–32, 48–54.
At Harrow, a portion of the founder's money is alleged to have been improperly diverted to the repairs of certain highways, 21–24. The Sayer Gift devoted to two exhibitions at Caius College, Cambridge, 25–27.
Rugby School, has property in Middlesex and Warwickshire, 5–40; which produces an income of 6,377*l.* 18*s.* 4*d.*, 18–40; management, 5–13; income appropriated to erection of school chapel and almshouses, 14–40, 386–390; a reserve fund, 18–40; payments of masters, 41–60, and endowments or fellowships, 61–91; borrowed money, 386–390. Extraordinary change in relative value of the Warwick and Middlesex property, 489–492.
Shrewsbury property, described, 54 et seq., 787–789; also the new Chancery scheme, 78–98, 790–807.
Property, Value of. Extraordinary relative change in Warwick and Middlesex, 489–492.
Provost of Eton:
(*See* Eton and Masters.)
Duties and powers of, 942–1007; with Head Master controls the school, 942 et seq., 3010–3041, 3069–3073, 3092–3101; with Fellows manages the property, 942 et seq.; elected by *congé d'élire*, 5526–5530.
Provost and Fellows of Eton:
(*See* Eton, Masters, and Provost.)
Also 3010–3026, 3122–3128, 3037–3041, 3051–3062, 3069–3073, 3083–3090, 5560–5594, 3652–3671, 3678–3696, 1558–1578, 9501 et seq.; choice of Fellows, 904–930. Provost and Fellows have exclusive right to the pulpit, 3124–3151, 5137–5144.
Publications, Scientific:
Sell principally in the manufacturing districts, Gen. Ev., Lyell, 77–81; political effect of this, 82 et seq.
Public Houses. (*See* Drinking.)
At Eton, visited on Sundays, but less than formerly, 5243–5266, 8383–8428, 8225–8247; prohibited, 2547–2554.
At Merchant Taylors', 1043–1047.
Public Schools:
The great object is to teach just what is required for the University matriculation examination, Gen. Ev., Lyell, 8; in other words, to carry out for the majority who do not go to the Universities, a scheme of education fitted only for the minority who do, 9–16; wishes the natural sciences treated in the matriculatiou examinations of Oxford and Cambridge as they are in the examinations at the University of London, 17–19; and also in the public schools, gaining the necessary time by postponing some of the Greek and Latin verses to the Universities, 26–33.
As they are now, and as they were a quarter of a century ago, St. P., 1035–1039.
Punishments:
At Eton, 3109–3119, 3625–3643, 6224 et seq., 2777 et seq., 2917–2921, 8514–8531; less frequent than formerly, 2931 et seq.
Corporal, 6224 et seq., 2922–2938, 2942–2950, 5028, 5082–5092; much less frequent than formerly, 6224 et seq.; refusal to be flogged, 2951–2955; Master consults Provost before awarding great punishment on a foundationer, 3092–3101; and fellows, 1007 et seq.; expulsion, 1015 et seq.; very rare, 1015–1030.
By monitors, 8748 et seq., 7521 et seq., 2848–2877, 4575–4642, 7105–7134.
At Winchester, 1108–1123, 1125–1129, 1849 et seq., 709–730; and with advantage, 1326–1347, 1502–1509.
Flogging has been discontinued with good effect, 1502–1509.
At Westminster, 1182–1199, 3665 et seq.; flogging rare, 2327–2343; at fagging, 2661 et seq.; by monitors, 1200–1220, 1230–1239, 1282–1285, 2081 et seq.
At Charterhouse, 1516–1543, 135–143, 914–916, 923–928; flogging, 914–916, 1013–1017, 884–894, 2110–2119, 2156–2180.
At St. Paul's, corporal punishment restricted to a blow on the hand with a cane, 536–544, 884–894; a removal does not amount to expulsion, 542 et seq.
At Merchant Taylors', no flogging, 184 et seq., 580–618, 1010–1023; suspension and dismissal, 337 et seq., 580–618; diminution of, proved beneficial, 580 et seq.
At Harrow, 395, 455–460, 470–491, 674–740, 907–957, 1906–1920, 1570–1579, 1750–1776, 1161–1176; caning

Punishments—*continued.*
not resorted to, 681 et seq., 723 et seq.; but it might supersede the necessity of lines and writing out, 681 et seq.; flogging, 683–738; expulsion, 948–951.
At Rugby, expulsion, removal, solitary confinement, flogging (never to big boys), caning, impositions, 900–963, 1517–1523, 1531–1535, 1524–1526; check to excess in power of appeal, 952–959.
At Shrewsbury, little flogging, 1270–1279, 587–597; flogging confined to little boys, 587 et seq.; writing out, 583 et seq.
Pueri Commensales, at Eton, 1498–1527.

Q.

Qualification for scholarships at Winchester, Win., 976–990.
Queen's gold medals given at Winchester for compositions in Latin and English, and elocution, Win., 606 et seq.
Queen's scholars the aristocracy at Westminster, but the others are a numerous class, and have their privileges, West., 1270–1279; privilege of Queen's scholars, distinctive dress, and right of attending Parliamentary debates, 326–331, 2039–2055; the debates lead the boys to take interest in general politics, and to read newspapers, 2436 et seq.; Dean and Chapter pay for their tuition, 1784 et seq.

R.

Rank of boys' parents:
At Eton, some are nobles, 1498 et seq.; others wealthy, 4336 et seq., 5365 et seq.; bills range from 150*l.* to 210*l.* a-year, 2317 et seq., 5713 et seq.; rank of many scarcely known, 2161 et seq.; expense of an economical foundationer, exclusive of clothes and pocket money, need not exceed 25*l.*, 4833 et seq.
At Winchester, little considered, 1029–1034.
At Westminster, condition of parents never considered; *filii nobiles* always on the list, 637.
At Charterhouse, poor but well connected, generally sons of professional men, 1370 et seq., 30 et seq.; it was not the sole object of the founder to educate for the universities, 1380 et seq. (*See* Charterhouse.)
At St. Paul's, generally sons of professional men, with a few sons of tradesmen, Gen. Ev., Browne, 13; St. P., 450–456, 624 et seq.
At Merchant Taylors', generally sons of professional men, with a few sons of tradesmen, Gen. Ev., Browne, 13 et seq.
At Harrow, sons of the higher classes, 584–585; seldom sons of tradesmen, although they are entitled to the education, 177.
At Rugby, only about 20 of the boys are sons of tradesmen, 2010–2020, and 381.
At Shrewsbury, 25 boys only out of 131 are burgesses' sons, who are entitled to a gratuitous education, 66–77, 363–367.
Racket Court at Shrewsbury, 665 et seq.
Rates at Eton, 542, 543.
Recitations at Winchester, 817–821.
Recreation. (*See* Games.)
Registrar at Eton, performs the duties of notary public required by the statutes, but not appointed, 453–456.
Relations between different Classes of Boys in the Public Schools:
At Eton. (*See* Oppidans and Collegers.)
At Winchester, relations between commoners and foundationers very friendly, 1371–1379, 1413–1418; collegers and scholars on perfect equality, 1021–1029.
At Westminster, relation of the college boys and town boys good; they associate freely in games, 1673 et seq., 2039–2045; home boarders and others all treated alike, no social inequality, 779–783, 2052–2055, 460–464; Queen's scholars' privileges, 2039–2051.
At Charterhouse, relations between foundationers and boarders; the old feeling against day boys dying out, 32–37; all meet on an equality, 1511–1515, 40–53, 59 et seq., 351–370.
At Harrow, relations of foundationers, boarders, and other boys good; they mix together completely, 175 et seq.
At Rugby, relations between foundationers and non-foundationers good; a boy would only be looked down upon from personal disqualification or the position of his father, 1181–1183, 1150–1156, 2010–2020, 2139–2154, 1504–1511; of boy to tutor and boarding master, 1222–1228, 2094–2098, 2392–2399.
At Shrewsbury, school boys and town boys are pretty much on an equality, 1003–1011; some class feeling, however, still prevails, 288–299, 666–673.
Religious Training:
At Eton, 7622–7635, 6205–6216, 4000–4009, 2829–2844, 6747–6753; sermons of the Provost and Fellows and Assistant Masters, 3124–3159, 7606–7612, 5137–5144, 5617–5619, 4010–4013, 4023–4027, 2889–2904, 4250–4257, 8461–8477, 5861–5863, 9503–9509, 3138 et seq.; Dr. Arnold's sermons, 3124–3151; church and chapel services, 3160–3168, 3178–3180, 5128–5134, 6199–6202, 1812–1819, 1833–1835, 1913–1917, 1924, 2905–2912, 5846–5849, 8271 et seq., 9510 et seq.; choral services, 3160–3168, 3178–3180, 5135, 5136, 4014 et seq., 7284–7305, 7320–7328, 8271–8278, 9512–9515; prayers in boarding and dames' houses, 3169–3171, 4014 et seq., 2829–2837, 7613–7621, 7329 et seq.; preparation for confirmation, 6203 et seq., 8478–8485, 7306–7319; private prayers, 6215–6222, 7251–7258; Holy Communion, 7613–7621, 8478–8485, 7306–7319; prayers, 1824 et seq., 1833–1835, 1909–1911; intercourse between tutor and pupil, 2829, 7331–7341, 9016–9049; a short daily service advocated, 6855–6857.
At Winchester, 1153 et seq., 1167–1180, 182–184, 690–704, 1430–1434; preaching, 995–1000.
At Westminster, 1164–1181, 2245–2262, 2344–2348, 421–435; special services, 185–189, 2245–2255.
At Charterhouse, 884–901.
At St. Paul's, Greek Testament, &c., 533–535; prayers daily, 546–552.
At Merchant Taylors', 809–822, 570–579.
At Harrow, 1707–1722, 1731–1734, 1238–1256, 635–661.
At Rugby, boys attend chapel on Sundays, Good Friday, Ascension Day, Passion Week, All Saints, and Founder's Day; other services and prayers, 870–884, 1654–1686; private prayer, 428–443, 1703–1705.; Greek Testament, 1654–1686.
At Shrewsbury, 1083–1104.
Removal suggested of Metropolitan Schools into the Country:
Of Westminster, 3799 et seq., 22–24, 32–48, 916–920, 925–927, 989–991, 1332–1384, 1997–2002, 285–287, 295–306, 309–314; the present site healthy, 3845–3857, 991–994, 276–284; probable cost of a new site, 3821–3831; removal would neutralize the privilege of Queen's scholars attending Parliamentary debates, 925, 989–991.
Of Charterhouse, 119–132, 156, 313–318, 1339–1341, 1498–1504, 2145 et seq., 599–616.
Of St. Paul's, 977–982, 999–1008, 587–596, 612 et seq., 132–150, 833–842.
Of Merchant Taylors', objectionable, M. T., 648–653; Gen. Ev., Browne, 1–12, 15–56, 60–70.
Remunerations at Eton, 446–449.
Repetition at Eton, 7466–7474.
Residence at Eton, 5602–5907, 3678–3685.
Residence:
Two years' residence required of parent before making his son a foundationer at Rugby, 349–351.
Rewards and punishments at Eton, 3625–3643.
Ridley, M. W., Esq.:
His evidence, H., IV., p. 219.
Rifle Volunteer Corps:
At Eton, 5370–5383.
At Winchester, 793–806.
At Westminster, a failure, 1304 et seq.
At Charterhouse, 955–964.
At Harrow, 766–777.
At Rugby, 402–407, 1021–1026.
At Shrewsbury, declining, 674 et seq.
Roman Catholics:
At Eton, excluded from competition for the foundations, 1258–1279.
At St. Paul's, not excluded, 145–150.
At Harrow, not refused, but as all boys are required to attend chapel regularly, Catholics are practically excluded, 649.
Rowing:
(*See* Boating.)
At St. Paul's, discontinued owing to the crowded state of the river, 1037–1039.
At Merchant Taylors', no longer exists, owing to the crowded state of the Thames, 645 et seq.
Ruault, M. G.:
His evidence, H., IV., p. 217.
Rugby, rapid increase of population of, R., 354–368, 497–500; large increase in the value of property at Rugby, 354–368, 502.
Rugby School:
Preference given to classics over mathematics, 2259–2306; but classical and mathematical masters treated alike, 156–159; Rugby boys going to the Universities have read as much or more Greek and Latin than boys from any other school, 2159 et seq., 1755, 1966–1971; teaching far preferable to that in the German schools, 1183–1200, 1219–1221; the system, however, less beneficial to the best boys than to the rest, 2208–2217; half the boys are imperfectly educated in classics, 1229 et seq., 1273–1282; last year 139 boys went to the Universities, 101 did not, 2258–2276; the Rugby system is calculated to give the boys all the education they can receive, 2395; and the time at Rugby is educationally well employed, 1966–1971; high tone of boys, 868 et seq., 1001–1003, 1593–1597; rebellion at Rugby, 1124 et seq.; two terms preferred to three, 1004–1012; reserve fund, 18–40, 242–244, 311 et seq.; three times as many applications as admissions, 391 et seq., 1031–1036.

S.

Saints' days, at Eton, 7599–7605.
(*See also* Holidays.)
Salaries. (*See* Emoluments.)
Sanatorium:
At Eton, 4780–4792, 5674–5676, 5704–5708, 8287–8324; Her Majesty's, the late Prince Consort's, the Provost's, the Fellows', and the Masters' contributions thereto, 4790 et seq., 1889–1901.
At Westminster, 1763–1767, 1889–1901.
At Harrow, strictly none, but careful provision made for the sick, 764 et seq., 980 et seq.
Sanitary condition of Winchester, Win., 966–969.
Saunders, Very Rev. A. P., D.D., Dean of Peterborough:
His evidence, Ch., IV., p. 21.
Sayer Gift, the. (*See* Property, Harrow.)
Scheme, Shrewsbury (settled by Lord Cottenham, and overriding an Act of Parliament, 78–89), generally acted upon, 99 et seq., 790–816.
Scholars:
At Eton, entitled to share with Provost and Fellows in the surplus, being included under the term "collegium," 4093–4111; proposed increase of, 5595–5601; foundation scholars now chosen after strict examination, instead of simply nominated as of old, consequently the foundation are the *élite* of the school; any Queen's subject eligible; notice of the examinations given conspicuously in the morning papers, 1228 et seq., 1303 et seq.; Roman Catholics, and illegitimate, diseased, and mutilated children, are practically excluded, 1258–1279; the open competition has raised the intellectual status of the school, 1280 et seq., 1392–1395.
At Westminster, elected by open competition, 401 et seq.; the plan introduced by the Visitor has been successful, 433–437.
Scholarships:
At Eton, 940 et seq.; value of, 1396–1413; competition for, has raised the intellectual character of the school, 2145.
At Winchester, 1015–1020, 1280, 109–113; the Goddard, 78–83, 606 et seq., 1280.
At Westminster, 15–21, 712–735.
At Charterhouse, 277–282, 304–311, 1316–1320, 620–632; competitive, 293–301, 304–321, 620–632; conferred by nomination, 358–379 et seq., 638–641; number to be increased by 16, 638–641.
At Merchant Taylors', 506 et seq., 533 et seq.
At Rugby, 2146–2158, 1069 et seq.
School Charges and Expenses:
At Eton, 3213–3249, 5270–5280, 6059 et seq., 6069 et seq., 3911–3923, 3946–3950, 361 et seq., 388–404, 2317–2343, 4833 et seq., 4872–4975, 4176–4186, 4303–4311, 8309–8334, 7448–7465, 5748–5762, 9474–9484; remitted on score of poverty, 3916–3923, 2256–2264; Head Master and Provost would prevent increase of charges, 2359–2366.
At Winchester, 289–326.
At Westminster, 749–756, 1771, 1800–1804, 1898 et seq.
At Charterhouse, 336–350, 1143, 1254 et seq.
At St. Paul's, 181–185.
At Merchant Taylors', 247–257, 368, 372–375.
At Harrow, 184–192, 215, 216, 292–301, 969–971, 2052–2057; maximum charge, 180*l.*, 217–224; average, 145*l.*, 217–224; in the small boarding houses, 210*l.*, 230–269.
At Rugby, to foundationers and non-foundationers, 208–214, will average 65*l.* a half, but have been as low as 50*l.*, 393–401, 1031–1036; might be raised with advantage, 1031–1036.
At Shrewsbury, 153–156; often remitted to sons of poor clergymen, 153 et seq., 283 et seq.
General Evidence, school charges in the metropolitan schools; Browne, 72 et seq.
School Hours:
At Winchester, 1289, 1290, 849–863.
At Westminster, school hours, holidays, and time for games, 2442–2449.
At Merchant Taylors', 723–731; boys not overworked, 900 et seq.; sufficient time for recreation, 900 et seq.
At Rugby 30 or 40 hours a week given to work, 2347–2359, 1013–1018, 1835–1839; the boys are not overworked, 1823.
At Shrewsbury, 1105–1110, 717–722; early in winter, 1226–1282, 654–664.
General Evidence, Carpenter, 82–87.
School of Design, at Shrewsbury, attended chiefly by the non-collegiate class, 570–575.
School of Mines, Jermyn Street:
Gen. Ev., Lyell, 62–70.
Science, Natural. (*See* Natural Science.)
Science and Art:
Department of, Gen. Ev., Carpenter, 106.
Scott, Rev. C. B., B.D.:
His evidence, West., III., pp. 411, 432, 506.
Sewerage at Eton:
(*See* Eton, Property.)
Shirking:
At Eton, 2984–2989, 5091–5094, 5100–5105, 8222–8224.
Shrewsbury, Corporation of:
Their evidence, Sh., IV., p. 325.
Shrewsbury School:
Founded by Edward VI. in 1551, as a "*Libera Schola*," 56–61; definition of the phrase, 62–65; constitution of the school altered by 38 George III., 66–77; and again by a Chancery scheme, 78 et seq., which overrode the Act of Parliament, 78–91; burgesses' sons have a right to gratuitous education, 66 et seq., 153–156; a preference is given first to Shrewsbury boys, and then to Shropshire boys, 1178–1217; the school is a good school, 1308–1331; and time is educationally well spent there, 1308–1310; the boys go to the Universities with about the same amount of reading as other boys, 1123; reason of success at Cambridge and not at Oxford, 711–716; books read at Shrewsbury before going to the Universities, 1124–1166; Dr. Millington's Charity, 1–51, 538–541; divided between the School and Magdalen College, 1–51. (*See* Non-Collegiate Class.)
Shrewsbury School, Governors of:
Their evidence, Sh., IV., p. 339.
Shuttleworth, J. S., Esq.:
His evidence. (*See* Evidence of Lane), St. P., IV., p. 71.
Sidgwick, Arthur, Esq.:
His evidence, R., IV., p. 296.
Singing at Charterhouse under Mr. Hullah, Ch., 488, 856 et seq., 1788–1811.
Single rooms. (*See* Dormitories.)
Sleeping accommodation. (*See* Dormitories.)
Smith, Rev. Bowden, Foreign Language Master at Rugby:
His evidence, R., IV., p. 283.
Smoking:
At Eton, 7249 et seq.; prohibited, 5080–5084, 8225 et seq., 5317, 5387–5391.
At Harrow, 712–722.
At Rugby, 1598–1604.
At Shrewsbury, 600–604.
Punishment for, 600–604.
Southam, Councillor:
His evidence. (*See* Corporation of Shrewsbury.)
South Kensington School of Arts, Gen. Ev., Lyell, 62–70.
Speeches at Winchester, 817–821.
Spurling, J. W., Esq.:
His evidence, St. P., IV., p. 96.
Statutes. (*See* Oaths):
At Eton, statutes only partially observed, 5608–5613, 748 et seq.; opinion that the variation from the statutes to suit the times gives more than a set-off to what the boys have lost by the change; enumeration of the advantages of the set-off, 322–386; a change as early as in the time of Elizabeth, 748 et seq.; the statutes prescribe reading them three times a year, but it is not done, and half of them are obsolete, 813–818; many of the statutes, chiefly relating to religious matters, cannot be observed, and the Visitor is of opinion that the Provost is not bound to enforce what reasonable usage has dropped; wherever possible, the statutes are enforced, 1055–1101, 1129–1139, 2234–2255, 2269–2282; Heywood's copy of the statutes is accurate, with the exception of a few misprints, and the omission of the 30th and 31st, relating to orisons and masses, 1102–1128.
At Winchester, some have become obsolete and inconsistent with the law of the land, 223–227.
At Westminster, carried out to a reasonable extent, 4, 52 et seq.; never confirmed, either originally or otherwise, 1772–1776, 1950, 1951; the Lord Chancellor's (Westbury's) opinion of their operation, 1772–1784, 1844 et seq., 1902–1905.
At Harrow, adhered to, with exceptions, 52–63.
Stewart, Mr. Alan:
His evidence, West., III., p. 504.
Stewart, Lewis M., Esq.:
His evidence, Ch., IV., p. 44.
Stimulus to work:
At Eton, none for oppidans, 5145–5154; home influence, 8533–8535; might be obtained by exhibitions, &c., 5161–5164.
At Winchester, 1238 et seq.; 1254–1258, 596 et seq.
At Westminster, 2352–2365, 458 et seq.
At Charterhouse, 1645–1651.
At St. Paul's, 945–960, 799–781; prizes sufficient, 871–877.
At Merchant Taylors', desire to obtain scholarships, &c., 845–851, 1008 et seq., 1024–1037.
At Harrow, 1974–1976, 1777–1780, 1791–1795, 1848–1852.
At Rugby, 2128–2138, 2155–2158, 2204–2207, 1818–1822.
At Shrewsbury, 1222–1225.
Stipends. (*See* Emoluments.)
St. Asaph, Bishop of, West., 1395–1410.
St. John's Church. (*See* Improvements at Eton), 219–243.

St. John's College, Oxford. (*See* Merchant Taylors' School), 1–22.
St. Paul's School:
Original charter destroyed in the Great Fire, but copies preserved in the Tower, 151–153; it is not a hard-working school, and that is a disadvantage at the Universities, 824 et seq.; it was founded by Dean Colet, who intended that all the boys should receive an education fitting them for the Universities, but the majority do not go to the Universities; the first master, Lilly, the first Englishman who taught Greek, 906–910; boys all foundationers, 911 et seq. (*See* "Improvements suggested," and "Removal suggested.") Worth of site, 60,000*l.*, 983–989; existing difficulties, 1009–1018, 1035–1037; no connexion with St. Paul's Cathedral, 1019; want of power in the Head Master, 1020–1023; present prospects of St. Paul's, 1035–1037. (*See* Boarding Houses.) Paulines go chiefly to Trinity College, Cambridge, on account of the special exhibitions, 748 et seq.; boys are sons of men in the three professions, 450–452, 563–565; not half a dozen out of the 153 are sons of tradesmen, 452–456, 624 et seq.; the boys distinguish themselves, 458–466; but less than formerly, 614–619; enumeration of distinguished Paulines, 641–643; a fair proportion of prizes gained by Paulines at the Universities last year, 905.
Stocker, Richard, Esq. (*See* Evidence of P. L. P. Lybbe, Esq.), E., III., p. 308.
Studentships at Westminster, 10–21.
Studies:
At Eton, 7342–7420, 8806 et seq., 5890 et seq., 6123 et seq.
At Rugby, assignment of, 411–415, 428–443.
At Westminster, 813–816, 831–838.
Sunday drinking:
At Eton, at inns, not much of it, 3171–3177, 6030–6041, 5065–5079.
Sunday:
Mode of spending, at Eton, 7580–7598, 6223, 8461–8477, 7284–7305.
At Westminster, 2234–2244.
At Charterhouse, 1616–1623.
At Harrow, 635–665, 1947–1956.
At Rugby, intercourse between boarding masters, religious lectures, chapel, sermons, lessons, Greek Testament, 1158, 2041–2060, 898 et seq., 1654–1686.
At Shrewsbury, mode of spending it, 1083–1104.
Superannuated Scholars:
At Eton, 2729–2736, 4865.
At Winchester, 58–126, 131–135. (*See* Fellows and Fellowships.)
At Westminster, 2029–2034. (*See* Benefices.)
At Charterhouse, none, 222 et seq.
At Harrow, none, 862.
Swells:
At Eton, described, 8248–8250; opinion at Eton that muscle is superior to brain, 8253–8264.
Swimming:
At Eton, 5355–5359.
At Winchester, 808–816.
At Westminster, 1316 et seq.; baths, 1317 et seq.
At Shrewsbury, 674 et seq.

T.

Talbot Exhibition, The, at Charterhouse:
Foundationers excluded from it, Ch., 252–254.
Tap, The:
At Eton, 6030–6041.
Tarver, H., Esq.:
His evidence, E., III., p 237.
Taxation:
At Shrewsbury, in the hands of the head boy, 674–687.
Taxation of School:
At Rugby, in power of the Big Side Levee, consisting of the Upper School, subject to approval of the Head Master and to the Big Side Levee paying double, 969.
Teaching:
Method of, at Eton, 5990 et seq.; far beyond what the statutes require, 353–364.
Teaching of Languages, order and mode of, R., 1201–1208.
Temple, Rev. Frederick, D.D., Head Master of Rugby:
His evidence, R., IV., pp. 241, 254, 257.
Themes:
At Eton, 4991–4999.
Thompson, H. L., Esq.:
His evidence, West., III., p. 466.
Thresher, J. H., Esq., a Winchester boy:
His evidence, Win., III., p. 377.
Thrupp, Joseph William, Esq.:
His evidence, M.T., IV., p. 115.
Thursfield, James R., Esq., Scholar of C.C.C., Oxford:
His evidence, M.T., IV., p. 145.
Thynne, Rev. Lord John, Sub-Dean of Westminster:
His evidence, West., III., p. 455.
Time for Science without interfering with Classics, H., 1807–1835. Gen. Ev., Faraday, 58–66.
Time table:
At Eton, 3601–3604, 6843–6854; for lessons, 5951 et seq., 6077 et seq.
Tithes:
Commutation of, at Shrewsbury, 817, 818.
Tomline prize of 30*l.* at Eton, the, 2679.
Tone of School:
At Eton, 8383–8428, 7143–7183, 9485–9487.
At Winchester, 1124, 1384–1396.
At Westminster, 2115–2138.
At St. Paul's, 536 et seq., 895–899.
At Merchant Taylors', 1043–1047.
At Rugby, 868 et seq., 1001–1003, 1593–1597.
At Shrewsbury, 1041 et seq.
Turle, Mr. James:
His evidence, West., III., p. 444.
Training. (*See* Classics, Mathematics, Religious Training, Mental Training, and Natural Science as a means to it.)
Translations:
At Eton, 4991–4999.
At St. Paul's, 646–662, 668.
At Shrewsbury, 475–486.
Trouncer, J. W., Esq., Mayor of Shrewsbury:
His evidence. (*See* Dr. Kennedy, Corporation of Shrewsbury, and Governors of Shrewsbury School.)
Tutorial System:
At Eton, described and approved, 8798 et seq., 3271–3332, 3386–3395, 3353–3359, 3363–3368, 3383–3385, 3646–3647, 5908–5912, 3895–3901, 3966–3999, 1803–1811, 2299 et seq., 2308–2316, 2535–2545, 2751–2776, 5007–5027, 4303–4311, 4470–4502, 8486–8513, 8540–8546, 9016–9049; charge for private tuition and board, 3911 et seq.; payment to tutors apparently inconsistent with gratuitous education, but it is by consent, 1414–1449; opinion that the tutors do too much, the boys too little, 8122–8149.
At Harrow, 140–145, 193–197, 430–454, 467–469, 476, 455–466, 470–529, 815–817, 787–791, 1957–1968, 1738–1749, 1382–1388, 1127–1133; private tutor stands *in loco parentis* to his pupils, 787–833, 1735–1737, 1185–1220.
Tuition, Private:
At Winchester, exceptional, 1195–1237; but increasing, 438–447, 625–656, 1435–1453.
At Westminster, abolished by Dean Liddell, 143–167, 907 et seq., 943–980, 406–413; none at Westminster for 250 years, 597–600; advantages of moral superintendence obtained from the boarding masters, 168–172; Eton system approved, 966–968; still exists to a small extent, 1682–1694.
At Charterhouse, exceptional, 1635–1644, 796–822, 670 et seq.
At St. Paul's, none, 446 et seq., 756 et seq.
At Merchant Taylors', none, 788–808, 381–386; boy tuition, 557–566, 1000–1004.
At Rugby, 2061–2093, 2099 et seq., 2121–2127, 245–282, 465–480, 808, 814–857, 1726–1754; the fee of 10 guineas would be remitted to a foundationer if he asked for the remission, 245–282.
At Shrewsbury, differs from private tuition in other schools; it is used only on special occasions, or for boys specially requiring it; it is like Cambridge rather than Eton, 876–895, 1113–1122, 286 et seq., 201–212, 238 et seq., 542–546.
Tutors' Houses:
At Eton, 5871–5884, 7958–8079, 2535–2545, 4961–4970.
Tutor, Boy, system, at Merchant Taylors', exceptional, 557–566.

U.

Universities, German and English compared, Gen. Ev., Airy, 54–67.
University Education:
Value of, diminishing in public opinion, Sh., 691 et seq.

V.

Vecqueray, G., Esq.:
His evidence, R., IV., p. 283.
Verse composition:
At Merchant Taylors', has contributed much to success at Oxford in the moderation schools, 568.
Viceroy system, suggested, E., 3757–3759, 5242, 5505 et seq., 4236 et seq., 8118. Opinions upon it, 5242, 5505–5517, 4028–4034, 4976–4990, 4236 et seq.
Visitation, at Westminster, 104–126, 638–646.
Visiting property:
At Eton, 61–63.
Visitors:
At Eton, opinion of the Bishop of Lincoln on the obsolete statutes, 1055–1101, 1129–1139; claim of the Bishop of Oxford to be visitor, on transfer of Eton parish from the diocese of Lincoln to that of Oxford, 1102–1145, 1619, 1636–1645; Archbishop of Canterbury and Bishop of Lincoln have ceased to visit, 1146 et seq.

Visitors—*continued.*
At Winchester, 229–258, 1006, 1007; double visitations by New College, Oxford, and the Bishop have never clashed, 229–258.
At St. Paul's, the Visitors are the Mercers' Company, 302 et seq.
At Charterhouse, the Governors, 1453–1458.
At Rugby, there is no visitor, but the duty is efficiently performed by the trustees, 199-202.

His evidence, H., IV., p. 216.
Washing:
At Rugby, 444–450.
At Westminster, 1805 et seq.
Weare, Rev. Thomas William:
His evidence, West., III., p. 402.
Welch and Lincoln Scholarships gained generally by a Welch boy, West., 1726–1746.
Wellington's, the late Duke of, commendation of Westminsters, West., 453–457.
Westcott, Rev. B. F., Assistant Master at Harrow:
His evidence, H., IV., p. 206.
Westminster School:
Described, 1565–1572, 916–920, 1759–1770; not a separately endowed foundation, 1759, 1789–1799; education there intended to be gratuitous, 1772; but fees always paid, 1777–1780, 740–748, 341–351; state of school, good, except in numbers, 255; scholarship improved of late, 1701 et seq.; few Westminsters gain the highest academical honours, 127 et seq., 1701–1731; the reason for this, not the falling off in Westminsters, but the greater improvements elsewhere, 1701–1731; formerly only Greek and Latin taught in the schools; there was private tuition, also fortnightly examinations; and the Westminster boys gained honours and prizes at Oxford, 885–889; mathematics, geography, history, and modern languages were then left to the University, private study, and travel, 912–915; Hebrew, formerly taught, discontinued, 626 et seq; school ought to have a portion of the Chapter property set apart, 613–618; it might be advantageously more defined, 1961–1969; tone and character of the boys high and honourable, 2115–2138; formation of character left much to public opinion, 2349–2351; opinion that the education at Westminster is as good as can be received at school; of late years Westminsters have not stood so well at Oxford in the final schools, but have stood well at moderations; and at Christchurch nearly half the classical first class men in moderations have been Westminsters, 2463–2475; connexion with Christchurch, 288–294; Westminster boys successful, and the late Duke of Wellington said the best officers in his staff were the Westminsters, 453–457; Alumni Westmonasterienses, West., 74–78.
Wightman, Rev. E. C. L., Vicar of St. Alkmund's, Shrewsbury:
His evidence. (*See* Dr. Kennedy.)
Wilder, Rev. John, M.A.:
(*See* evidence of Dr. Goodford, E., 322 et seq.)
Williams's, Bishop:
Scholarships at Westminster, with elections to St. John's, which have lapsed, 712–735.
Williams, the Rev. S. F., Mathematical Examiner at the Charterhouse:
His evidence, Ch., IV., p. 42.
Wilson, J. M., Esq.:
His evidence, R., IV., p. 280.
Winchester School:
Founded by William of Wykeham, 347, principally for the priesthood, 974, 347–358, 364–368, 373 et seq.; the property and its management described, 4–20; estate sold to Her Majesty at Osborne, and the purchase money invested in another at Hambledon, 17, 31–35; governed by Warden and Fellows, the latter to be reduced to six, 29 et seq., 127–130; education classical, 974 et seq.; time spent there usefully employed, 1363–1365; the school open to general competition; last year there were 108 candidates for the college, 98 came to examination, and only 8 were admitted, 919–926; so long as it is regarded essential that the clergy should be learned, Greek and Latin must be retained, and the curriculum of education must be that which will enable the boys to obtain the Oxford endowments, 974 et seq.; Wardens and Fellows the governing body and responsible for the subjects taught, 1005–1007; a warden governing a head master would be monstrous, but that it is an inheritance, 362 et seq.; Winchester men considered at Oxford fair scholars, 1510–1521.
Wood, Thomas, Esq.:
His evidence, H., IV., p. 204.
Woolwich military examination pitched too high, Gen. Ev., Airy, 88–91.
Working Hours:
At Eton, 7867 et seq.
At Harrow, 1846 et seq.
Writing Master:
At Rugby, 162–177, 311 et seq.; effect on handwriting of impositions, 1998–2002.
